REPORT ON OPERATIONS

1 -

SUMMARY OF FISCAL OPERATIONS

Budget expenditures of the United States Government totaled \$40.2 billion in the fiscal year 1950 compared with \$40.1 billion in 1949. Net budget receipts of \$37.0 billion in 1950 compared with \$38.2 billion in 1949. The excess of expenditures of \$3.1 billion was \$1.3 billion more than the budget deficit of \$1.8 billion in 1949. The increase in the deficit was due almost entirely to the reduction of \$1.2 billion in net budget receipts.

The deficit of \$3.1 billion and a rise in the general fund balance of \$2.0 billion were met by an increase in the public debt of \$4.6 billion and an increase in net receipts in trust accounts, etc., of \$0.6 billion. The cash balance in the general fund stood at \$5.5 billion on June 30, 1950. On that date the public debt amounted to \$257.4 billion.

The frame of the fiscal operations of the Government in the past two years is shown in the table following. The figures are on the basis of the daily Treasury statement. Annual data for 1932–50 and monthly for 1950 are contained in table 1 in the tables section of this report.

• •				•	0	1949	1950

BUDGET RECEIPTS

Net budget receipts, which consist of total receipts less the appropriation to the Federal old-age and survivors insurance trust fund and refunds of receipts, amounted to \$37.0 billion in the fiscal year 1950 and were \$1.2 billion less than in 1949. In both years the receipts were below the average level in the fiscal years 1946 through 1950, a level exceeded only by the high receipts in the war years of 1944 and 1945. The receipts of \$37.0 billion in 1950 compared with receipts of \$42.2 billion in 1948, the highest since 1945.

From the record of \$44.8 billion in 1945, receipts declined to \$40.0 billion in 1946. This decline resulted from the part-year effect of the Revenue Act of 1945 which reduced individual and corporation income taxes and repealed the excess profits tax effective January 1,

1946: and also from the effects on receipts of the Tax Adjustment Act of 1945, and a decrease in taxable incomes.

In 1947, net budget receipts remained at the same level as in 1946. The progressively greater effect of the tax reductions enacted in 1945 reduced collections from the corporation income and excess profits taxes substantially. Collections from all other major tax sources. however, increased as a result of rising income levels and greater availability of taxable goods and services. A significant increase in the nontax source "Miscellaneous receipts" resulted from a very large rise in receipts from sales of surplus property, offset in part by a decline in receipts from renegotiation of war contracts.

Sharply rising incomes accounted for the increase in net budget receipts to \$42.2 billion in 1948; but, in 1949, receipts declined because of individual income tax reductions enacted in 1948 and because of the tapering off of surplus property sales. The decrease in receipts continued in 1950 as corporation profits declined and as miscellaneous receipts continued to decrease.

As indicated by the estimates of budget receipts for 1952, page 50, net budget receipts in the fiscal year 1951 are expected to approximate the highest of the war years, while net budget receipts in 1952 will be much larger than those in any previous year. Chart 7 shows total receipts by major sources for the years 1944 through 1950. Detailed information for these and earlier years is contained in the tables section of this report.

Receipts in the fiscal years 1949 and 1950, on the daily Treasury statement basis, are compared by major sources, in the following table.

	10.0		Increase, or	Increase, or decrease (-)	
Source	1949	1950	Amount	Danasat	
	In billions of dollars			Percent

^{*}Less than \$50 million.

See table 116, footnote 3.

Includes Railroad Unemployment Insurance Act receipts.

CHART 7.

All major tax sources with the exception of customs and employment taxes showed decreases in 1950 as compared with 1949.

Individual and corporation income and excess profits taxes remained the most important sources of revenue, accounting for \$17.4 billion and \$10.9 billion of receipts, respectively, and together constituted slightly more than two-thirds of total receipts. Only relatively small changes took place in other major sources of receipts. As a percentage of total receipts, miscellaneous internal revenue increased for the second successive year and employment taxes also continued to increase. All other sources declined for the third consecutive year.

RECEIPTS FROM INCOME AND EXCESS PROFITS TAXES

Receipts from income and excess profits taxes amounted to \$28.3 billion in the fiscal year 1950, a decrease of \$1.2 billion as compared with receipts of \$29.5 billion in 1949.

Individual income taxes.—The details of the yield of the individual income tax are shown in the following table.

			Increase, or	decrease (-)
Source	1949	1950	Amount	Percent
	In n	nillions of do	llars	rereent
Withheld (daily Treasury statement basis)	9, 842	10, 073	232	2. 4
Not withheld (collection basis) Adjustment to daily Treasury statement basis 1	7, 996 +91	7, 264 +71	-732 -20	-9. 2
Not withheld (daily Treasury statement basis)	8, 087	7, 335	-752	-9.3
Total individual income taxes	17, 929	17, 408	-520	-2.9

¹ See table 116, footnote 3.

Receipts from withheld taxes increased slightly in the fiscal year 1950 while receipts from taxes not withheld dropped substantially. The decrease in receipts from taxes not withheld reflected a drop in the profits of unincorporated businesses whose taxes are collected by means of declaration payments.

Corporation income and excess profits taxes.—Receipts from this source were \$10,854 million or \$699 million less than the \$11,554 million received in the fiscal year 1949. This decrease resulted primarily from a lower level of profits in the calendar year 1949 as compared with previous years. Another factor in the smaller receipts was the tapering off of back excess profits tax collections, which dropped from \$194 million in 1949 to \$87 million in 1950.

RECEIPTS FROM ALL OTHER SOURCES

Miscellaneous internal revenue.—Receipts from the major groups of taxes included in this category are shown in the following table.

	1040	1050	Increase, or	decrease (~)	
Source	1949	1950	Amount	Percent	
	In r	nillions of do	llars	reicent	
Estate and gift taxes	797	706	-90	-11.3	
Excise taxes: Liquor taxes Tobacco taxes Stamp taxes Manufacturers' excise taxes ¹ Retailers' excise taxes Miscellaneous excise taxes (including repealed) ^{2 3}	2, 211 1, 322 73 1, 761 449 1, 759	2, 219 1, 328 85 1, 827 409 1, 721	9 7 12 66 -40 -38	. 4 . 5 16. 2 3. 7 -8. 9 -2. 1

Total excise taxes 1 3	7, 551	7, 597	45	´ 6	
Total miscellaneous internal revenue 1 3	8, 348	8, 303	-45	{	

¹ Excludes taxes collected on firearms, shells, and cartridges which are included in "Miscellaneous receipts."
² See table 116, footnote 7.

Excludes collections of the hydraulic mining tax, which are included in "Miscellaneous receipts."

See table 7, "Note."

Estate and gift taxes.—Estate and gift taxes amounted to \$706 million in the fiscal year 1950, a decrease of \$90 million from 1949. The Revenue Act of 1948 which reduced both estate and gift tax liabilities was responsible for the decline in receipts from this source.

Excise taxes.—Receipts from excise taxes increased to \$7,597 million in the fiscal year 1950. The increase of \$45 million resulted from increases in liquor taxes, tobacco taxes, stamp taxes, and manufacturers' excise taxes partially offset by decreases in retailers' excise taxes and miscellaneous excise taxes. Manufacturers' excise taxes increased \$66 million. Record levels of automobile production resulted in an increase of \$119 million in collections from the tax on passenger automobiles, which continued their increase for the sixth successive year. The largest decline in this group was in parts and accessories for automobiles, which fell \$31 million.

Retailers' excise taxes declined for the third straight year and were \$40 million less than in 1949.

Miscellaneous excise taxes declined by \$38 million in the fiscal year 1950. Declines in collections from the taxes on admissions, transportation of persons, and transportation of property were the principal sources responsible for the decrease in collections. The most substantial increase in revenue in this group was from the tax on local telephone service, which rose \$23 million.

Liquor taxes and tobacco taxes showed slight increases over collections in 1949.

Stamp taxes increased 16.2 percent in the fiscal year 1950. Collections from taxes on issues and transfers of securities and on the sale of playing cards increased in 1950.

Employment taxes.—The yields of the various employment taxes, on the daily Treasury statement basis, are shown in the following table.

,		1050	Increase, or	r decrease (-)	
Source	1949	1950	Amount	D	
	In millions of dollars			Percent	
Federal Insurance Contributions Act. Federal Unemployment Tax Act. Railroad Retirement Tax Act. Railroad Unemployment Insurance Act ¹	1, 690 223 564 10	2, 106 226 550 9	416 3 -14 -1	24. 6 1. 6 -2. 4 -6. 3	
Total employment taxes	2, 487 1, 690	2, 892 2, 106	405 416	16. 3 24. 6	
Net employment taxes	796	786	-11	-1.4	

¹ Not classified as an employment tax under Internal Revenue Code.

Total receipts from employment taxes amounted to \$2,892 million in the fiscal year 1950, an increase of \$405 million, or 16.3 percent, over receipts in 1949. The railroad taxes showed decreases which were offset by higher receipts from the other employment taxes. The Federal Insurance Contributions Act showed a sizable increase resulting principally from higher tax rates and a change in collection procedure. The tax rate increased from 1 percent each on employer and employee to 1½ percent effective January 1, 1950. Also effective January 1, 1950, collections of this tax from certain employers are payable on a monthly basis instead of a quarterly basis. This change in the method of collection resulted in receipts in the fiscal year 1950 of more than one year's normal receipts.

Customs.—Customs receipts in the fiscal year 1950 were \$423 million, or 9.9 percent, more than in 1949.

Miscellaneous receipts.—Miscellaneous receipts amounted to \$1,430 million in the fiscal year 1950 and were \$642 million less than in 1949. The decrease reflected the continuing decline in receipts from the sales of surplus property and certain accounting changes which reduced miscellaneous receipts but had no effect on the surplus or deficit.

Refunds of receipts.—Refunds of receipts amounted to \$2,160 million in the fiscal year 1950, a decline of \$678 million from 1949. The 1950 refunds represent a normal figure as compared with the

abnormal refunds in the fiscal year 1949. These abnormal refunds in ... 1949 resulted from the overwithholding of individual income tax. in the first four months of calendar year 1948, caused by the passage of the Revenue Act of 1948.

BUDGET EXPENDITURES

The budget expenditures total of \$40.2 billion in the fiscal year 1950 closely approximated the total in 1949. The 1949 and 1950 level of expenditures represented an increase from the postwar low of \$34 billion in 1948 but was still considerably below the total of over \$60 billion in the demobilization year of 1946. The declines following 1946 were due mostly to curtailments in national defense expenditures. although in 1948 a part was due to decreases in outlavs for international finance and aid and for veterans. The rise which followed in 1949 and 1950 resulted primarily from growing expenditures for special domestic programs and also from expenditures for the European Recovery Program. At the close of the fiscal year 1950, with the beginning of the action in Korea, it was apparent that total expenditures would increase significantly in 1951 and in 1952 under the impact of the expanded defense program. Estimates of expenditures for these years are shown on page 57.

In 1949 and 1950, as in the other postwar years, the combined outlays for national defense, international finance and aid, and veterans accounted by far for the greater share of the total. Although the levels of total expenditures in 1949 and 1950 were similar, in 1950 there were some substantial differences in the amounts expended for several major purposes. These are shown, on the daily Treasury statement basis, in the accompanying tabulation. Details for these and earlier years are given in chart 8 and in tables 2, 3, and 5 in the tables section of this report.

Year	National defense and related activities	Inter- national finance and aid ¹	Interest on the public debt ²	Veterans' Adminis- tration	Other	Total 1
			In billions	s of dollars		
1949 1950	12. 2 12. 4	6. 0 4. 7	5. 3 5. 7	6. 9 6. 5	9. 7 10. 9	40. 1 40. 2

¹ For comparison with other years, transactions in 1949, and also in 1948, relating to the Foreign Economic Cooperation trust fund, established under the Economic Cooperation Act of 1948 (62 Stat. 150), sec. 114 (f), have been consolidated with budget expenditures.

² Beginning Nov. 1, 1949, interest on the public debt is reported as an expenditure when such interest becomes due and payable rather than on the basis of interest payments.

CHART 8.

National defense expenditures of \$12.4 billion in 1950 were only slightly above similar outlays in both 1948 and 1949, following the demobilization. In 1950, expenditures were \$3.5 billion for the Department of the Air Force, \$4.1 billion for the Department of the Army, and \$4.1 billion for the Department of the Navy. Stockpiling of strategic and critical materials accounted for \$439 million of expenditures in 1950.

Expenditures of \$4.7 billion in 1950 for international finance and aid were \$1.4 billion less than in 1949. This was the largest change from 1949 in any major group of expenditures. It occurred mainly in outlays for government and relief in occupied areas, and for the aid provided by the Economic Cooperation Act. The decline reflected in part the recovery made in the economies of the occupied areas since the beginning of the program.

Expenditures for the program of international finance and aid, which became significant for the first time in 1946 with a total of \$727 million, averaged more than \$4.9 billion during the next 4 years. The principal purposes in the first 3 years were the credit of \$3,750 million to the United Kingdom, the provisions under the Bretton Woods Agreements Act, and loans by the Export-Import Bank. Expenditures for government and relief in occupied areas in 1947 amounted to \$514 million, rose to \$1,333 million in 1949, and were \$753 million in 1950. These expenditures, which were made by the Army, were mainly for shipments of goods to prevent disease and unrest. The expenditures in 1949 were augmented by the assumption on the part of the United States of all dollar costs of imports for relief in the bizonal area of Germany. Expenditures under the Economic Cooperation Act totaled more than \$4.0 billion in 1949, and more than \$3.5 billion in 1950.

In this year the United States began to provide military assistance to nations who have joined us in the mutual defense assistance program under the North Atlantic Treaty. Expenditures under this program amounted to \$44 million.

Interest on the public debt of \$5.7 billion in 1950 compared with \$5.3 billion in 1949. Half of this increase, however, was due to a change in the reporting method during the year. Since November 1, 1949, interest has been reported as an expenditure when such interest becomes due and payable, as distinguished from the previous practice of showing the expenditure on the basis of interest paid by the Treasurer of the United States. During the 5 years ended with 1950 interest on the public debt gradually increased from \$4.7 billion to \$5.7 billion.

Veterans' Administration expenditures at \$6.5 billion in 1950 were nearly \$0.4 billion less than in 1949. There was an over-all decrease

of \$0.7 billion which primarily represented the tapering off of the readjustment benefit programs which grew out of World War II. This decrease was partially offset by an increase of \$0.4 billion in transfers to cover the share of the Government in the costs of the national service life insurance fund. The figures shown here, of course, refer only to budget expenditures for veterans, and therefore exclude the payment of dividends and other benefits to veterans out of the national service life insurance fund.

The remaining expenditures, classified as "Other," represented outlays mainly for special domestic programs, and also for the running expenses of the Government. The total was \$10.9 billion in 1950, which was \$1.2 billion more than in 1949. The increase consisted in large part of additional aid to agriculture, public assistance, and mortgage purchases by the Federal National Mortgage Association, which, throughout the year, was an affiliate of the Reconstruction Finance Corporation.

Total expenditures in this classification increased in each succeeding postwar year. In the earlier years of this period, as in 1950, the increase was accounted for almost entirely by expansion of the special domestic programs rather than expenditures for general government. In 1950, expenditures for aid to agriculture amounted to \$3.0 billion (including \$1.7 billion net expenditures of the Commodity Credit Corporation) and constituted more than 27 percent of this total; while social security budget expenditures accounted for a total of \$2.0 billion, which was more than 18 percent of these expenditures. Public works in 1950 accounted for about \$1.6 billion, or 15 percent of the total in this group. Other expenditures in this classification include outlays by the Atomic Energy Commission, aids to education, labor, finance, commerce, industry, housing, and transportation, as well as the expenses of the legislative, executive, and judicial departments of the Government not classified elsewhere.

TRUST ACCOUNTS, ETC., RECEIPTS AND EXPENDITURES

In addition to budget receipts and expenditures of the Government, certain other receipts and expenditures are classified separately in the daily Treasury statement under the title "Trust accounts, etc." The trust account receipts for the most part represent moneys received by the Government for the benefit of individuals or classes of individuals. Moneys held in trust as such are payable to or for the use of beneficiaries only and therefore are not included in the budget expenditures of the Government.

Payments from the general fund to various trust accounts, such as the Government's payment to Federal employees' retirement funds and the national service life insurance fund, are included in budget

expenditures and under the various trust account receipts as transfers from the general fund.

The net transactions in trust accounts, etc., for the fiscal years 1932 through 1950 are summarized in table 1 of this report, and receipts and expenditures for the fiscal years 1942 through 1950 are shown in table 6 by major classifications. Details by months for 1950 and totals for 1949 and 1950 are shown in table 4.

GENERAL FUND

The general fund of the Treasury represents all moneys of the Government deposited with and held by the Treasurer of the United States.

The assets in the general fund are certain gold, silver, currency, coin, and unclassified collection items, and deposits to the credit of the Treasurer of the United States in Federal Reserve Banks, special depositaries, and national, foreign, and other bank depositaries.

The liabilities of the general fund include outstanding Treasurer's checks, deposits of certain Government officers consisting of balances to the credit of the Post Office Department, the Board of Trustees of the Postal Savings System, and postmasters' disbursing accounts, etc., uncollected items, and exchanges.

The difference between total assets and total liabilities is the general fund balance. On the basis of the daily Treasury statement, the general fund cash balance at the close of the fiscal year 1950 amounted to \$5,517 million, an increase of \$2,047 million during the year.

The net change in the balance of the general fund during the fiscal year is accounted for as follows:

Salance June 30, 1949Add:		\$3, 470,	403, 311. 67
Budget receipts, net Trust accounts, etc., receipts Net increase in gross public de		6, 668,	733, 557. 37 734, 224. 25 992, 490. 71
<u> </u>	•	51, 770,	863, 584. 00
Deduct: Budget expenditures, including wholly owned Government corporations Trust accounts, etc., expenditures	40, 166, 835, 914. 82 6, 569, 596, 863. 78

ceipts	482, 656, 886. 25	46, 253,	775, 892. 35
Salance June 30, 1950		5. 517.	087, 691, 65

A comparative analysis of the assets and liabilities of the general fund is shown as of June 30, 1949 and 1950, in table 40.

PUBLIC DEBT OPERATIONS AND OWNERSHIP OF FEDERAL SECURITIES

The public debt amounted to \$257.4 billion on June 30, 1950, which was \$4.6 billion larger than on June 30, 1949.

Most of the net change in the public debt was accounted for by a rise of \$4.7 billion in the nonmarketable interest-bearing debt, chiefly in Treasury savings notes, but also in United States savings bonds. Marketable interest-bearing debt increased by \$162 million, the first net rise in any fiscal year since 1946. This rise was the result of a net increase in bills of \$2.0 billion, which was offset for the most part by unexchanged portions of maturing issues. Nonbank holdings of the debt increased \$3.0 billion during the year, continuing the long-term trend to reach a new high record.

The computed annual interest rate on the interest-bearing debt was 2.200 percent on June 30, 1950, a slight decrease from the rate of 2.236 percent at the beginning of the year. Exchanges of maturing and called securities for new issues bearing lower average interest rates were the principal factor in the decline in the annual rate.

The volume of the public debt and guaranteed obligations outstanding since 1943 is shown in chart 9. The following table shows the public debt by class of security and the guaranteed obligations outstanding at the close of the fiscal years 1949 and 1950, on the basis of the daily Treasury statement. Guaranteed obligations held by the public, a very minor part of the total of the public debt and guaranteed obligations outstanding, amounted on June 30, 1950, to approximately \$20 million, a decrease of nearly \$8 million during the year. Historical detail on the public debt and guaranteed obligations is given in tables 12 through 20.

Class of debt	June 30, 1949	June 30, 1950	Increase, or decrease (-)	
	In billions of dollars

Public debt operations and changes in ownership of the debt for the fiscal year 1950 are given in the two sections which follow.

PUBLIC DEBT OPERATIONS

MARKETABLE ISSUES

The net increase of \$162 million in the marketable interest-bearing debt brought the total to \$155.3 billion on June 30, 1950, compared with \$155.1 billion a year earlier. Net increases occurred, as is shown in the following table, in Treasury notes and in Treasury bills.

Class of security	June 30, 1949	June 30, 1950	Increase, or decrease (-)	
,	In billions of dollars			
Treasury bills Certificates of indebtedness Treasury notes Treasury bonds Other bonds (postal savings, etc.).	11. 5 29. 4 3. 6 110. 4	13. 5 18. 4 20. 4 102. 8	2. 0 -11. 0 16. 8 -7. 6	
Total interest-bearing marketable issues	155.1	155.3	2	

^{*}Less than \$50 million.

Bonds, notes, and certificates of indebtedness.—Treasury bonds, notes, and certificates of indebtedness in the amount of \$40.7 billion matured or were called for redemption during the fiscal year 1950. Of this total, the securities exchanged for new issues amounted to \$38.8 billion, while the small remainders of the matured or called issues turned in for cash redemption rather than exchange aggregated \$1.8 billion. The accompanying tables summarize the financing transactions during the year. Additional details are contained in exhibits 1 through 6 and in tables 22 and 23.

¹ Marketable issues in this table are exclusive of special series of certificates of indebtedness, postal savings bonds, and other debt items. Nonmarketable issues are exclusive of adjusted service bonds; armed forces leave bonds; depositary bonds; excess profits tax refund bonds; special notes of the United States: International Monetary Fund series; United States savings stamps; and guaranteed obligations.

² Includes tax and savings notes in the amount of \$1,039 million surrendered in payment of taxes.

The matured and called securities consisted of five issues of Treasury bonds, eight issues of one-year certificates of indebtedness, and one issue of Treasury notes. These issues were refunded into six issues of Treasury notes and four issues of one-year certificates of indebtedness. The first note issued carried a maturity of 4½ years; four of the notes carried maturities ranging from 13 to 20 months; and one note was for a five-year period.

The refunding of \$7.6 billion of Treasury bonds into these intermediate and short-term securities resulted in the largest decrease in outstanding Treasury bonds in any one year, from \$110.4 billion on June 30, 1949, to \$102.8 billion on June 30, 1950. The decrease was entirely in bank-eligible bonds, bringing the total outstanding at the close of the year to \$53.2 billion from \$60.8 billion a year earlier.

Table 13 shows the amounts outstanding at the end of the fiscal years 1940–50.

The first financing operation of the fiscal year 1950 was anticipated by the Secretary of the Treasury with his announcement on June 16, 1949, that the Treasury would offer to holders of the \$5.8 billion of one-year 1½ percent certificates of indebtedness, Series F-1949, maturing July 1, an issue of one-year 1½ percent certificates in exchange. Subscriptions accepted for the new issue, Series F-1950, totaled \$5.6 billion. This refunding continued the interest rate of 1½ percent per annum which had characterized the certificate issues since October 1, 1948.

This short-term rate was changed, however, in the refundings of September-October 1949 which the Secretary of the Treasury announced on August 22. The announcement stated that the Treasury would offer a new one-year 1½ percent certificate on August 31 to holders of the 2 percent Treasury bonds of September 15, 1949–51, called for redemption on September 15, 1949; a new certificate to refund the certificates maturing October 1, 1949; and a new Treasury note in exchange for the three Treasury bond issues called for redemption on December 15, 1949. Subsequently, one-year 1½ percent certificates, Series G-1950, due September 15, 1950, and Series H-1950, due October 1, 1950, were issued to subscribers in the respective amounts of \$1.2 billion and \$6.2 billion.

An announcement by the Secretary of the Treasury on November 30, 1949, stated that the Treasury note issue to refund the three Treasury bond issues redeemable on December 15 would be offered also in exchange for the 1½ percent certificates maturing December 15. The new notes bear an interest rate of 1½ percent and a maturity of four and one-quarter years. The announcement stated also that an issue of one-year 1½ percent certificates would be offered in exchange

for the certificates maturing January 1. Subscriptions accepted for the 1% percent Treasury notes, dated December 15, 1949, amounted to \$4.7 billion. Exchanges of the certificates maturing January 1 for the new one-year 1% percent certificates, Series A-1951, amounted to \$5.4 billion.

On January 13, 1950, the Secretary of the Treasury announced a new issue of 20-month 1½ percent Treasury notes to refund the one-year 1½ percent certificates maturing February 1. Exchanges amounted to \$1.9 billion.

Three new issues of Treasury notes were announced by the Secretary of the Treasury on February 14, 1950, to refund the four March and April maturities of certificates, Treasury bonds, and Treasury notes. Pursuant to the announcement the following offerings were made. An issue of 16-month 11/4 percent Treasury notes, Series B-1951, was exchanged for the one-year 11/4 percent certificates maturing March 1. Subscriptions accepted amounted to \$2.7 billion. An issue of 5-year 1½ percent notes, Series A-1955, was offered in exchange for the 2 percent Treasury bonds of 1950-52 (dated October 19, 1942). This note issue was reopened in exchange for the 181/2month 1% percent Treasury notes which matured April 1, 1950. Subscriptions accepted for Series A-1955 totaled \$5.4 billion. An issue of 15-month 11/4 percent notes, Series C-1951, was offered to refund the one-year 11/4 percent certificates which matured April 1. Exchanges of the new Treasury notes amounted to nearly \$0.9 billion.

The final financing operation of the year was announced by the Secretary of the Treasury on May 4, 1950, when he stated that the Treasury would offer new issues of 13-month 1½ percent Treasury notes dated June 1 and July 1, in exchange for the one-year 1½ percent certificates of indebtedness maturing on those dates. Subscriptions to the first of these note issues, Series D-1951, dated June 1, 1950, amounted to \$4.8 billion.

Treasury bills.—Weekly offerings of Treasury bills were made in the fiscal year 1950. The three-year record of a substantial net retirement of bills was broken in 1950 when, in contrast, there was a net increase of \$2.0 billion, the first in any fiscal year since 1945. This amount takes account of the minor differences involved between the maturing issues and the new securities when the maturing issues were refunded into new series of Treasury bills. The year's issues consisted of 50 carrying terms of 91 days; one, on August 25, 1949, a term of 92 days; and one, on November 25, 1949, a term of 90 days. The 13 issues outstanding at the end of the fiscal year 1949 totaled \$11,536 million; the 13 issues outstanding at the end of the fiscal year 1950 totaled \$13,533 million.

Of the total increase in bill offerings, \$800 million took place in the six weeks beginning August 4. Each of the offerings of August 4 and 18 exceeded the maturing issue by \$200 million. The other four offerings were \$100 million in excess of each issue maturing. From September 15 through April 6, the offerings were for the amount of the maturities. Between April 13 and June 29, however, offerings exceeded maturities by \$1,200 million, with each offering exceeding the maturing issue by \$100 million.

Average rates on new Treasury bills during the year ranged from a low of 0.923 percent for the July 14, 1949, issue to a high of 1.179 percent for the June 8, 1950, issue. The average rate for the July 7, 1949, issue was 1.052 percent, and for the June 29, 1950, issue, 1.172 percent. There was some fluctuation in the rates in the first half of the fiscal year which ranged from the low of 0.923 percent to 1.115 percent for December 8 and 15. From January 12 to the end of June, there was a gradual rise from 1.076 percent to 1.172 percent. Weekly rates on new bills throughout the year are shown in exhibit 9. Bids on the fixed price basis averaged about \$92 million a week and amounted in the aggregate to about 9 percent of all bids accepted.

Additional information on Treasury bills is contained in exhibits 7 through 10, and in table 23.

NONMARKETABLE ISSUES

Nonmarketable public securities issued during the fiscal year 1950 totaled \$13.2 billion and redemptions, \$8.3 billion. The increase of \$4.7 billion in the nonmarketable interest-bearing securities outstanding was due mainly to the rise of \$3.6 billion in Treasury savings notes and also to the rise of \$1.3 billion in United States savings bonds outstanding. The table following shows the changes in the amounts of the nonmarketable interest-bearing classes of securities outstanding at the end of 1949 and 1950.

Class of security	June 30, 1949	June 30, 1950	Increase, or decrease ()		
	In billions of dollars				
United States savings bonds (unmatured): Series D	1. 9	0. 9	-1.0		
	33. 1	34. 5	1.4		
	21. 2	22. 1	.9

	1. 7	1. 5	2		
Total interest-bearing nonmarketable issues	62. 8	67. 5	4. 7		

United States savings bonds.—Sales of Series E, F, and G savings bonds (including accrued discount) exceeded redemptions during the year by \$2.3 billion. Sales amounted to \$5.7 billion, issue price. On June 30, 1950, the \$57.5 billion of unmatured bonds (Series D-1940 through Series G) outstanding (at current redemption value) were 22.3 percent of the total outstanding public debt and guaranteed obligations, the same proportion as a year earlier. Since 1935, when savings bonds were first sold, the volume of Series A-G bonds issued, including accrued discount, has totaled \$93.7 billion, while redemptions have totaled \$36.0 billion. On June 30, 1950, the redemption value of the bonds outstanding was 62 percent of the amount issued (including accruals).

Redemptions of savings bonds (Series A-G) during the year totaled \$5.4 billion, an increase of \$355 million over those in 1949. The increase resulted from the larger volume of matured bonds in the total, and the increasing amount of accrued discount which reflects the lengthening periods in which the bonds have been outstanding. Series A-D redemptions included \$667 million of matured bonds which were redeemed in the six months ended June 1950, the first period for which the data have been tabulated to show matured redemptions separately from those unmatured. Redemptions of Series A-D bonds in 1950 totaled \$1,081 million compared with \$703 million in 1949. On June 30, 1950, there were \$895 million unmatured Series D bonds outstanding compared with \$1,927 million a year earlier. By the end of April 1951 all Series D bonds will have matured. In May 1951, Series E bonds will begin to mature.

Series E bonds sold in 1950 amounted to almost \$4.0 billion, issue price, a decrease of \$286 million from sales in 1949. Series E sales were 70 percent of all savings bonds sold in 1950. Redemptions of Series E bonds amounted to \$3,521 million in 1950, as compared with \$3,530 million in 1949. The amount outstanding as of June 30, 1950, was \$34.5 billion, an increase of \$1.4 billion during the year.

Sale of the \$10 denomination of Series E bonds was discontinued at the close of business on March 31, 1950, following an announcement by the Treasury Department on March 15. Series E bonds of \$10 maturity value were authorized on June 7, 1944, for issuance exclusively to members of the armed forces.

Sales of Series F and Series G bonds together totaled \$1,680 million, issue price, in 1950. This compared with sales of \$1,737 million, issue price, in 1949, which is exclusive of sales of \$1,126 million in the special offering of Series F and G bonds in July 1-15, 1948, to certain institutional investors who were allowed to purchase these bonds in excess of the \$100,000 annual limitation up to \$1,000,000, issue price,

in the aggregate for the institutions concerned. (See table 29.) Redemptions of \$199 million of Series F bonds during the year compared with \$216 million in 1949. Redemptions of Series G bonds of \$621 million were \$2 million more than in 1949.

The redemption experience of savings bonds by yearly series is summarized in the following table. An analysis of these data by denominations is shown in table 33.

Percent of savings bonds sold in each year redeemed through each yearly period thereafter 1

Note.—The percentages shown in this table are the proportions of the value of the bonds sold in any calendar year which are redeemed before July 1 of the next calendar year, and before July 1 of succeeding calendar years. Both sales and redemptions are taken at maturity value. The average percentages shown above are simple averages of the percentages for the applicable annual series.

Detailed information on savings bonds from March 1935, when this security was first offered, through June 1950 is published in tables 28 through 33.

¹ Percentages by denominations may be found in table 33.

Treasury notes, tax and savings series.—Sales of Treasury savings notes amounted to more than \$6.1 billion (face amount) in the fiscal year 1950, nearly \$2.2 billion more than sales in 1949 and the largest volume sold since 1945. The increase was concentrated in the first two months of the fiscal year. Redemptions, including both tax and savings notes, amounted to over \$2.5 billion during the year. Of the redemptions, \$1.0 billion was applied to payment of taxes and \$1.5 billion was paid in cash. Unmatured savings notes on June 30, 1950, totaled \$8.5 billion compared with \$4.9 billion a year earlier. (See table 34.)

An amendment to the initial terms (dated August 17, 1948) relating to the purchase of Treasury savings notes, Series D, was announced on August 10, 1949. Effective August 11, 1949, these notes are sold at par and accrued interest from the first day of the month in which purchased to the day, inclusive, on which payment is made in cash or other immediately available funds. The amount of accrued interest payable by the purchaser is computed at the rate at which interest accrues on the notes (\$0.80 per month per \$1,000 par amount) for the actual number of days in the month in which the purchase is made. (See exhibit 11.) Previously the notes were dated as of the first day of the month in which payment, at par, was received and credited.

Special short-term certificates of indebtedness.—Special short-term certificates of indebtedness were sold twice during the year to cover overdrafts on Treasury balances at the Federal Reserve Banks in anticipation of the imminent receipt of income taxes. The first instance consisted of an issue of \$108 million on March 15, 1950. The securities were retired in full on March 16. The second was on June 15, when an issue of \$105 million was sold to the Federal Reserve Banks. These certificates were redeemed on the following day. Interest on the issues was paid to the Federal Reserve Banks at the rate of one-fourth of one percent per annum.

Special issues to Government investment accounts.—Outstanding interest-bearing securities issued by the Treasury for the investment of trust and other funds deposited in the Treasury decreased \$420 million during the year. The decrease compared with an increase of nearly \$2.6 billion in 1949. The decline in 1950 was the net result of \$1.9 billion of redemptions of special issues held by the national service life insurance fund in connection with the payment of special dividends, of a decrease of \$0.7 billion in issues to the unemployment trust fund, an increase of \$1.4 billion issued to the Federal old-age and survivors insurance trust fund, and increases totaling \$0.8 billion in the remaining accounts. Special issues outstanding totaled \$32.4 billion on June 30, 1950, compared with \$32.8 billion a year earlier.

CHART 10.

Note.—The wholly tax-exempt Panama Canal bonds of 1961 and the bank-eligible 2½'s of 1967–72 have been omitted from the chart in order to avoid undue complexity. Issues for which an exchange offer has been made or which are due or callable in less than 3 months are also excluded.

All bank-restricted issues are callable and all partially tax-exempt issues are bank-eligible.

INTEREST ON THE PUBLIC DEBT

Interest on the public debt during the year amounted to \$5,750 million, compared with \$5,339 million in 1949, daily Treasury statement basis. Nearly \$225 million of the \$411 million increase was a nonrecurring addition resulting from a change in reporting methods. (See table 36.) Under the new method, which was effective November 1, 1949, interest on the public debt is reported as an expenditure when the interest becomes payable rather than when actually paid. The increase in interest payments reflected also the accelerated accrual of interest on savings bonds as they approach maturity. The increase was due also to the rise in the public debt and the changes in its composition during the year.

The yields on marketable Government securities as of June 30 in 1949 and 1950 are shown in chart 10.

SINKING FUND

Credits accruing to the cumulative sinking fund in 1950 amounted to \$620 million which, added to the unexpended balance of \$6,582 million brought forward from the previous year, made available \$7,201 million. Of this amount, \$2 million was used for the retirement of 4½ percent Treasury bonds of 1947–52, which had been called October 1947. The unexpended balance of \$7,199 million was carried forward to the fiscal year 1950.

Tables 26 and 27 show the transactions on account of this fund since its inception on July 1, 1920.

STATUTORY LIMITATION ON THE PUBLIC DEBT AND GUARANTEED OBLIGATIONS

Section 21 of the Second Liberty Bond Act, as amended (31 U. S. C. 757b), limits the amount of obligations issued under authority of the act to \$275 billion outstanding at any one time. This limitation applies to the public debt and to those obligations of Government corporations and other business-type activities which are fully guaranteed by the United States (except such obligations held by the Treasury).

As of June 30, 1950, the unused borrowing authorization was \$18 billion. An analysis of the public debt and guaranteed obligations outstanding as affected by the debt limitation is shown in table 20.

OWNERSHIP OF FEDERAL SECURITIES 1

Approximately two-thirds of the \$4.6 billion increase in gross Federal debt during the fiscal year 1950 was accounted for by the increase of \$3.0 billion in the holdings of Federal securities by nonbank investors. Because of the large volume of alternative private investments available there was no significant active demand for marketable Federal securities on the part of long-term investors during the year. The increase of \$3.0 billion in nonbank holdings was more than accounted for by the net purchases of savings bonds by individuals and of savings notes and short-term marketable securities by commercial, industrial, and mercantile corporations.

Debt ownership by nonbank investors reached an all-time peak of \$173.5 billion by June 30, 1950, or more than \$10 billion above their holdings at the conclusion of the Victory Loan. In contrast to this upward trend of nonbank investment, there was a decline of almost \$33 billion in the holdings of Federal securities by the banking system—that is, commercial banks and Federal Reserve Banks—between the peak of the debt on February 28, 1946, and the end of the fiscal year 1950. Bank holdings continued to decline after June 30, 1950, as well and during the first part of the fiscal year 1950 they reached a point lower than at any other time in the last 6 years. On June 30, 1950, as was also true a year earlier, the banking system held only 33 percent of the total debt outstanding, as compared with 42 percent at the peak of debt and 39 percent before our entry into World War II.

The figures on bank and nonbank ownership, together with pertinent detail on the holdings of Federal securities by the various investor classes, are shown in the following table.

Gross public debt, and guaranteed obligations of the Federal Government held outside of Treasury.

¹ Gross public debt, and guaranteed obligations of Federal Government held outside of Treasury.

Individuals continued during 1950 to increase their ownership of Federal securities. During the year they added over a billion dollars to their holdings of savings bonds and by June 30, 1950, they owned savings bonds totaling approximately \$50 billion, with \$34½ billion in Series E bonds alone. Individuals' holdings of other securities declined slightly during the year. As is noted in the table above, individuals constitute the largest single investor group in the entire Federal debt ownership structure, reflecting the widespread distribution of the debt throughout the Nation.

Peak of debt.
 Includes partnerships and personal trust accounts.
 Nonprofit institutions and corporate pension trust funds are included under "Miscellaneous investors."
 Exclusive of banks and insurance companies.

Includes savings and loan associations, nonprofit institutions, corporate pension trust funds, dealers and brokers, and investments of foreign balances and international accounts in this country.

Holdings of Federal securities by insurance companies on June 30, 1950, amounted to about \$20 billion. Three-fourths of the total was in the hands of life insurance companies, whose investments are predominantly in long-term securities. Life insurance companies reduced their holdings of Federal securities by a little over \$1 billion during the year, following the trend which began 3 years ago as new private investment opportunities appeared in the form of an increased supply of mortgages and corporate securities. Liquidation of Federal securities was smaller during 1950, however, than it had been during the two preceding years. The decline in life insurance company holdings was offset in part by continued additions to the Federal security portfolios of fire, marine, and casualty insurance companies. In total, therefore, insurance company holdings were down by only \$0.7 billion during the year.

Mutual savings bank holdings of Federal securities totaled \$11.6 billion on June 30, 1950, with \$9.4 billion invested in bank-restricted bonds. Mutual savings banks have also been actively engaged in increasing their mortgage and corporate security portfolios during the last few years, but their holdings of Federal securities on June 30, 1950, were only \$0.6 billion below their all-time peak. Their holdings declined by only \$0.1 billion during the fiscal year 1950.

Corporations, other than banks and insurance companies, showed an increase of over \$3 billion in their holdings of Federal securities during the fiscal year 1950. Their holdings of \$18.3 billion in June 1950 were just about midway between their peak holdings of \$22.9 billion reached 5 years ago and the low point in the postwar period of \$13.5 billion on June 30, 1948. Manufacturing corporations alone accounted for over \$10 billion of holdings of Federal securities as of June 30, 1950, with holdings concentrated in the hands of the producers of automobiles and other heavy industrial products.

Miscellaneous investors held approximately \$10 billion of Federal securities as of June 30, 1950. About one-third of this amount was accounted for by holdings of securities by various international organizations and by the investment of foreign balances in the United States. Private pension trusts accounted for approximately \$2 billion of the total, with the remainder reflecting the holdings of nonprofit institutions, dealers and brokers, savings and loan associations, and certain smaller groups. There was very little change in the holdings of miscellaneous investors in the aggregate during the year, with more than the entire increase of \$0.3 billion accounted for by expanded investments of foreign balances.

Holdings of Federal securities by State and local governments as of June 30, 1950, amounted to \$8.2 billion, with very little change being reported by these investors during the year. State and local pension funds held approximately a third of the \$8.2 billion, with sinking funds holding a little over \$1 billion; the balance was accounted for by various operating and special funds. State governments alone accounted for \$5.6 billion of the total, with local government funds currently holding about \$2.6 billion.

Federal Government investment accounts held \$37.8 billion of Federal securities on June 30, 1950, of which \$32.4 billion were in special issues. Total holdings of Federal Government investment accounts declined by half a billion dollars during the year, in contrast to the usual increases which have characterized each year prior to 1950. There was a continued increase in the investments of the old-age and survivors insurance trust fund, railroad retirement account, Government employees' retirement funds, and several other funds, but these were more than offset by the effect on trust fund investments of (1) the payment of \$2.6 billion in dividends to veterans out of the national service life insurance trust fund during the last half of the fiscal year, and (2) the increased payment of unemployment benefits out of the unemployment trust fund during the year.

Commercial banks held \$65.6 billion of Federal securities at the end of the fiscal year 1950. About \$40 billion of this total was invested in bank-eligible bonds, over 75 percent of which were due or callable within 5 years. Commercial banks also held \$22 billion of bills, certificates, and notes. The average length to first call or maturity of their total holdings of marketable debt amounted to slightly over 3 years as of June 30, 1950, reflecting the policy of maintaining the Government portion of bank portfolios in a relatively liquid position. Commercial bank holdings rose by \$2.6 billion during the year, a large part of which was accounted for by the release of \$1.8 billion in reserves when reserve requirements were reduced during the early part of the period. As a matter of fact, commercial bank holdings of Federal securities actually declined by \$1.2 billion from December 1949 through June 1950. Federal Reserve Bank holdings of Government securities also declined both for the entire year (a decrease of \$1.0 billion) and for the last 6 months of the period (a decrease of \$0.6 billion).

An analysis of the estimated changes in bank versus nonbank ownership of Federal securities during the fiscal year 1950 is shown in the following table by type of issue.

Estimated changes in bank versus nonbank ownership of Federal securities by type of issue, fiscal year 1950 1

[In billions of dollars]

Special issues to Government investment ac- counts. Notes to International Bank and Monetary Fund	4	4 .2				
Other Total nonmarketable, etc	1 4.4	4.5	1 1	1		
Total chauge		3.0	1. 5	2.6	-1.	

For marketable securities as a whole the total increase during the year was only \$0.2 billion, consisting of an increase of \$2.0 billion in bills outstanding and a net decline of \$1.8 billion because of the unexchanged portions of maturing issues in the other three categories. Despite the fact that nonbank investors (principally nonfinancial corporations) absorbed three-fourths of the new bill offerings during the year, their holdings of marketable securities continued to decline, reflecting in large part the liquidation of securities by life insurance companies. Long-term investors bought most of the \$1½ billion of long-term bonds which were sold in the market during the year by the Federal Reserve Banks. However, these long-term investors had a large volume of alternative investments available in the form of new mortgages and corporate securities. As a result, their purchases of long-term bonds from the Federal Reserve Banks did not result in any net acquisition of Federal securities over the period, since they in turn sold shorter-term obligations to pay for the long-term securities.

The dominant factor in the increase of \$4.4 billion in nonmarketable securities during the year was the net sale of \$3.6 billion of savings notes, primarily to corporations other than banks and insurance companies. Savings bonds increased by \$1.3 billion during the year, largely absorbed by individuals.

907795---51-----4

^{*}Less than \$50 million.

Gross public debt, and guaranteed obligations of Federal Government held outside of Treasury.

The decline of \$22 billion in Federal debt from the February 1946 peak through June 1950 compares with an increase of over \$80 billion in all of the private debt of the country combined during the same period (debt of individuals, corporations, and State and local governments). Nevertheless, Federal securities still account for one-half of the total debt of the United States, more than double the ratio a decade ago. Furthermore, Federal securities continue to dominate the investment portfolio of the large financial institutional groups throughout the country and account for significant portions of the liquid assets of individuals and the current assets of corporations.

Nonbank investment in Federal securities of \$3 billion during the fiscal year accounted for about half of the total increase in liquid assets of nonbank investors during the year. Savings accounts in commercial banks increased by \$0.4 billion during 1950, while checking accounts increased by \$3.2 billion and currency holdings were unchanged. Both the Federal Government deficit of \$3.1 billion during the year and the fact that private credit extended by commercial banks increased by over \$5 billion resulted in a larger net increase in liquid assets this year than in the fiscal years 1948 and 1949.

CORPORATIONS AND CERTAIN OTHER BUSINESS-TYPE ACTIVITIES OF THE GOVERNMENT

In accordance with the President's recommendation in his 1948 Budget Message and certain provisions of law, the Treasury during the fiscal year 1950 continued to adjust the interest rates on advances to Government corporations and certain agencies to keep such rates closely in line with the interest cost to the Treasury on its borrowings. Generally, the interest rates now charged the corporations and agencies are based upon the average rate on outstanding marketable obligations of the United States, and in actual practice are stated in terms of the nearest one-eighth of 1 percent under such average rate. On June 30, 1950, the computed average interest rate on outstanding marketable obligations of the United States was 1.958 percent, resulting in a rate of 1% percent for the corporations and agencies involved. Where the advances by the Treasury are of a short-term character or involve special considerations, lower rates have been established to coordinate these rates with the interest cost to the Treasury of its short-term borrowings.

During the fiscal year 1950, there were several significant legislative changes affecting the borrowing authority of Government corporations. Under the provisions of Public Law 579, 81st Congress, approved June 28, 1950, the borrowing authority of the Commodity

¹ Table 106 presents data on the relationship between Federal fiscal operations and the Nation's financial structure for the 10-year period 1941-50.

Credit Corporation was increased by \$2 billion, making its total borrowing authority \$6,750 million. The Federal home loan banks and the Federal Savings and Loan Insurance Corporation in accordance with Public Law 576, 81st Congress, approved June 27, 1950, were authorized to borrow from the Secretary of the Treasury amounts limited by the provision that the aggregates outstanding at any one time may not exceed \$1 billion and \$750 million, respectively.

The National Housing Act of June 27, 1934, as amended (12 U. S. C. 1701-1748g), was further amended during the year, thereby increasing by \$4,050 million the amount of mortgages that could be insured. The increases under the various acts enacted during the year are as follows:

Title	Acts enacted during 81st Congress	lncrease (inmillions)
National Housing Act, as amended:		
Title I, section 8	Public Law 475, approved Apr. 20, 1950	1 \$100
Title II	Public Law 171, approved July 15, 1949, and letter of the President dated July 25, 1949.	200
	Public Law 278, approved Aug. 30, 1949, and letter of the President dated Aug. 30, 1949.	500
•	Public Law 387, approved Oct. 25, 1949, and letter of the President dated Nov. 18, 1949.	750
	Public Law 475, approved Apr. 20, 1950	2 1,000
Title VI	Public Law 387, approved Oct. 25, 1949, and letter of the President dated Nov. 18, 1949.	200
	Public Law 387, approved Oct. 25, 1949, and letter of the President dated Feb. 23, 1950.	300
	Public Law 475, approved Apr. 20, 1950	500
Title VIII	Public Law 211, approved Aug. 8, 1949	3 500
		4,050

¹ Could be increased by \$150 million upon approval of the President.

² A further increase of \$1,250 million could be made upon approval of the President. A partial increase of \$650 million was authorized by letter from the President dated July 18, 1950.

³ Could be increased by \$500 million upon approval of the President.

In addition, the Housing Act of 1950 (Public Law 475, 81st Congress, approved April 20, 1950) extended to July 1, 1955, the Federal Housing Administration authorization (title 1) to insure lenders against losses on home modernization and repair loans. The total amount of such outstanding insured loans shall not exceed \$1,250 million at any one time. The unused mortgage insurance authorizations at the end of the fiscal year 1950 amounted to \$317 million.

The amount of borrowing power of each Government corporation and agency and the total amounts of obligations outstanding as of June 30, 1950, segregated as to Treasury holdings and securities held by others, are shown in table 63.

Balance sheets received from corporations and certain business-type activities of the Government are published quarterly in the daily Treasury statement. These balance sheets show the amount and classification of assets, liabilities, and capital of the various corpora-

tions and activities, together with the capital owned by the United States and that privately owned. The balance sheets as of June 30, 1950, will be found in table 68 of this report.

Table 67 shows the combined net investment of the United States in such corporations and other business-type activities for the fiscal years 1941-50; and table 69 shows the income and expense of individual corporations and activities for the fiscal year 1950. The source and application of funds for the fiscal year 1950 are shown in table 70.

SECURITIES OWNED BY THE UNITED STATES GOVERNMENT

On June 30, 1950, the United States owned securities consisting of capital stock, bonds, and notes of Government corporations; securities representing loans made to railroads, farmers, home owners, foreign governments, etc.; and receipts evidencing United States subscriptions to the International Bank for Reconstruction and Development and to the International Monetary Fund. The net face value of these securities amounted to \$18,321 million; and the principal amount of obligations of foreign governments arising out of World War I amounted to \$12,660 million. A statement of the securities owned at the end of the fiscal year 1950, exclusive of World War I foreign government obligations, is shown in table 73, together with an explanation of each increase or decrease during the year.

TAXATION DEVELOPMENTS

No major revenue legislation was enacted during the fiscal year 1950. A tax revision bill (H. R. 8920) was passed by the House on June 29, 1950, but developments in Korea led to substantial changes in the bill and the Revenue Act of 1950 was not approved finally until September 23, 1950. Section I which follows summarizes the suggestions for the 1950 tax program made to the Congress by the President and the Secretary of the Treasury and describes the major provisions of the Revenue Act of 1950. Section II summarizes the Social Security Act Amendments of 1950 which were approved on August 28, 1950. Miscellaneous revenue legislation taking effect during the fiscal year is listed in exhibit 24.

I. REVENUE ACT OF 1950

A. THE PRESIDENT'S REVENUE PROGRAMS

The President's special tax message to the Congress on January 23, 1950, included two major recommendations: (1) That excise taxes be reduced to the extent, and only to the extent, that the resulting loss in revenue could be replaced by closing loopholes in the present tax

laws, and (2) that additional revenues of \$1 billion be provided by revising and improving the corporation income tax and the estate and gift tax. In addition, he recommended certain revisions with respect to taxation of income derived from foreign investments which were designed to facilitate the extension of financial and technical assistance to underdeveloped regions of the world under the Point Four Program. (See exhibit 19.)

Secretary Snyder appeared before the House Committee on Ways and Means on February 3, 1950, to discuss the details of the President's program. He emphasized the necessity for limiting the amount of excise tax reduction and specified as most urgently in need of reduction the excises on transportation of property and persons, long distance telephone and telegraph communications, and the retail excises. In the interest of tax equity, he recommended that the manufacturers' excise tax on radios be extended to television. He discussed in detail the loopholes which should be closed to provide replacement revenues for excise tax reduction. (See exhibit 20.)

Recommendations regarding corporate income tax revision included an increase in the general corporate rate from 38 to 42 percent, elimination of the "notch rate," and extension of the period for carrying over losses through provision of a five-year carry-forward and a one-year carry-back in place of the two-year carry-forward and two-year carry-back.

With respect to revision and strengthening of estate and gift taxes, the Secretary suggested correction of four major weaknesses: (1) The overly favorable treatment of property placed in trust for several generations, (2) the opportunity to escape the higher estate tax rates by making gifts subject to lower tax rates, (3) the large exemptions, and (4) the ineffectiveness of the present rate schedule.

On June 29, 1950, the House passed the tax revision bill, H. R. 8920, which provided excise tax reduction on a substantial list of commodities and services. Replacement revenues were to be obtained from closing tax loopholes and from an increase in the corporation income tax. Provision was made also for extension of income tax withholding to dividends at a flat 10 percent rate and for a gradual speed-up of corporate tax payments over a five-year period.

The Senate Committee on Finance began hearings on H. R. 8920 on July 5, 1950, with the understanding that action on the bill could be halted if international developments indicated it would be unwise to proceed with the legislation. The Secretary appeared before the Committee on the opening day to discuss the House bill on the basis of this understanding. (See exhibit 21.) A few days later, July 11, the Secretary recommended to the Chairman of the Committee that action on H. R. 8920 be suspended.

On July 25, 1950, the President in a letter to the Chairman of the Senate Committee on Finance recommended that, as an interim revenue measure, action should be taken immediately to revise and enact the tax bill so as to increase tax collections substantially for the taxable year 1950. (See exhibit 22.) The President's recommendations for interim tax legislation were discussed in the Secretary's statement of August 2, 1950, before the Senate Finance Committee. (See exhibit 23.)

It was suggested that H. R. 8920 serve as the basis for the legislation with the following adjustments: (1) Eliminate the excise tax reductions and other revenue-losing sections in the bill but retain the provisions for closing loopholes, withholding of dividends, and life insurance company taxation, (2) increase the corporation income tax rates in the bill, effective for 1950 incomes by an additional four percentage points, making the top rate 45 instead of 41 percent, as provided in the bill, and (3) increase individual income taxes, effective October 1, 1950, by removing for 1950 incomes one-quarter of the reductions made by the Revenue Acts of 1945 and 1948 and by eliminating such reductions entirely, beginning with the year 1951.

The Senate Finance Committee began work on the proposals in executive sessions on August 3 and reported a bill on August 22, With few major changes, this bill became the Revenue Act of 1950.

B. PROVISIONS OF THE ACT

The Revenue Act of 1950 increased individual and corporation income tax rates and made a number of other revisions in the income tax, estate tax, and excise tax provisions.

1. Individual income tax

a. Rates.—The act increased individual income tax rates at all income levels by eliminating the percentage reductions from "tentative tax" which were in effect during 1948 and 1949. The combined normal and surtax rate was thus increased from 16.6 to 20 percent in the first taxable income bracket and from 82.1 to 91 percent in the top bracket. The maximum effective rate limitation was increased from 77 to 87 percent. (See exhibit 26 for detail of rates.) The income-splitting provisions and the increase in exemptions enacted in 1948 were retained. Tax liabilities and effective rates under the Revenue Acts of 1948 and 1950 are compared in exhibit 25.

The full increase in rates applies to incomes in 1951 and subsequent years. Approximately one-quarter of the increases were applicable to calendar year 1950 incomes. The withholding rate applicable to wages and salaries in excess of personal exemptions was increased from

15 to 18 percent, beginning with October 1, 1950, in order to keep collections on a current basis for those subject to withholding.

The increase in tax liabilities of individuals under the act is estimated at \$700 million on 1950 incomes and \$2.9 billion on 1951 incomes.

b. Exclusion for members of the armed forces.—The act provided special income tax treatment for members of the armed forces while serving in combat zones. All pay of enlisted men and warrant officers and the first \$200 per month paid to commissioned officers is excluded from taxable income. The President is authorized to designate as a combat zone any area in which armed forces of the United States engage in combat in the period from June 24, 1950, to December 31, 1951.

2. Corporation income tax

a. Rates.—The act made an important change in the structure of corporation income tax rates. Under prior law, a "notch rate" of 53 percent was provided to bridge the gap between the lower rates applicable to incomes under \$25,000 and the general rate on incomes of \$50,000 or more. Under the 1950 act, rates were increased and the "notch rate" was entirely eliminated by the adoption of a simple dual rate system as follows: a normal tax of 25 percent applicable to the profits of all corporations, and a surtax rate of 20 percent applicable to profits in excess of an exemption of \$25,000. Thus, the rates became 25 percent on incomes below \$25,000 and 45 percent on amounts of incomes in excess of \$25,000.

The combined effect of the higher rates and the elimination of the "notch" was a relatively small increase in tax for corporations with net incomes under \$31,250, incidental reductions for corporations with net incomes between \$31,250 and \$71,400, and a general increase ranging up to 7 percentage points for larger corporations.

The new rates apply in full to taxable years beginning after June 30, 1950. A transition schedule was provided for the calendar year 1950 consisting of a normal tax of 23 percent applicable to entire profits and a surtax of 19 percent on incomes above \$25,000. For fiscal years beginning before July 1, 1950, and ending after June 30, 1950, the old rates applied to income allocated to the period prior to July 1, 1950, and the new rates to income allocated to the period after June 30, 1950.

It is estimated that the increase in rates added about \$1.5 billion of revenue on an annual basis, at calendar year 1950 income levels, after taking account of the reduction in individual income taxes resulting from the estimated reduction in dividend payments.

b. Acceleration of tax payments of corporations.—The act also provided for acceleration of tax payments of corporations. Beginning with taxable years ending on or after December 31, 1950, corporations are to speed up payments gradually over a 5-year period until they are on a two-installment (instead of the present four-installment) basis. When the two-installment system is fully effective, one-half the corporation income tax will be collected 6 months earlier than under prior law.

While the speed-up of corporation tax payments does not increase corporation tax liabilities, it will increase collections of the Federal Government in the fiscal years 1951–55. It is estimated that fiscal year 1951 tax receipts will be increased by \$856 million; receipts in each of the four succeeding fiscal years will increase by a somewhat larger amount.

- c. Carry-forward of business losses.—The provisions respecting carry-overs and carry-backs of net operating losses were amended to provide for a system of one-year carry-back and a five-year carry-forward instead of the former two-year carry-back and two-year carry-forward. The effect of this change is to extend the period over which business income may be averaged from 5 to 7 years.
- d. Life insurance company taxation.—The formula used in determining the income taxes of life insurance companies was revised for the years 1949 and 1950. This new formula, which is the same as that contained in House Joint Resolution 371, 81st Congress, second session, was designed as a stopgap to provide a tax contribution by life insurance companies pending the development of a permanent solution to this problem. (The operation and effect of this formula are explained in detail in Senate Report No. 1434, 81st Congress, second session, accompanying House Joint Resolution 371.)
- e. Amortization of emergency facilities.—The act provides special amortization with respect to emergency facilities completed after December 31, 1949, which are certified as essential to national defense by the certifying authority designated by the President. Taxpayers erecting new defense facilities will be allowed to write off, over a period of five years, the portion of the cost of such facilities which is certified as attributable to defense purposes.

Gains from sale of emergency facilities will be subject to tax at ordinary rates, rather than at capital gains rates, to the extent that they represent the difference between the special amortization deductions and ordinary depreciation.

f. Excess profits tax resolution.—The Joint Committee on Internal Revenue Taxation was directed to make a full and complete study of the problems involved in the taxation of excess profits. The House

Committee on Ways and Means and the Senate Committee on Finance were also directed to report out an excess profits tax bill (retroactive either to July 1 or October 1, 1950) as soon as practicable after November 15, 1950.

3. Tax-exempt organizations and charitable trusts

The act provides, under carefully specified conditions, for the imposition of income taxes on business income of educational, charitable, and certain other tax-exempt organizations, foundations, and trusts. Restrictions were placed on the accumulation or investment of income by certain exempt organizations or trusts and also on the transactions of these entities with donors or founders. As a corollary, deductions for income, estate, and gift tax purposes are denied to donors to organizations which engage in prohibited transactions.

The act makes subject to income tax business income, in excess of \$1,000, of certain tax-exempt organizations, largely so-called charitable and educational organizations, if the business is not substantially related to the performance of the functions upon which the organization's exemption is based. Certain rental income, generally that accruing from so-called purchase and leaseback transactions, is included in unrelated income.

Paralleling the changes for charitable and educational organizations is the provision that the unlimited charitable deduction allowed to trusts may no longer be taken with respect to income from any regularly carried on trade or business and certain rental income.

The act also makes explicit that charitable and similar organizations will not be exempt if they engage in specified financial transactions favoring substantial contributors or founders, their families, or corporations controlled by them. In addition, a trust engaging in the prohibited transactions is not allowed the unlimited charitable deduction but is limited to a deduction of 15 percent of net income. Denial of exemption from income tax or of the unlimited charitable deduction is also provided if accumulations of income are unreasonable in amount and duration, are used to a substantial degree for other than exempt purposes, or are invested in a manner to jeopardize the performance of the exempt function. As a corollary, when exemption is denied or the unlimited charitable deduction is not permitted, gifts or bequests will not be allowed as a charitable deduction to the donor or to the decedent's estate for income, estate, or gift tax purposes.

Provision was made also for the filing of information returns showing such items as income, expenses, and charitable disbursements, in the case of foundations and certain other charitable organizations, and trusts claiming unlimited charitable deductions. The returns are to be available for public inspection.

4. Capital gains and losses

Several changes were made in the provisions relating to capital gains and losses, most of which were directed at loopholes which permit conversion of ordinary income into capital gains, or short-term gains into long-term gains. One amendment provided in effect that the income realized by amateur artists and authors by the sale of their work will be taxed at ordinary income tax rates instead of receiving capital gains treatment.

Rules were provided as to the tax consequences of certain short sales of property. Where a sale of substantially identical property is made, and thereafter simultaneous "long" and "short" positions are maintained so as to give an actual short-term transaction the appearance of a long-term transaction, any resulting gain will be treated for tax purposes as short-term gain.

Provisions were added which were designed to close the loophole resulting from use of the device of the "collapsible" corporation to convert ordinary income into long-term capital gain. Gains from the sale or exchange (including liquidation) of stock in "collapsible" corporations will be taxed as ordinary income if (a) the stockholder owns 10 percent or more of the stock, (b) more than 70 percent of the gain on the stock is attributable to the property produced by the corporations, and (c) the gain is realized within three years after the property is produced.

Capital gains of nonresident aliens not engaged in trade or business in the United States will be subject to tax, at a 30 percent rate, if they are in this country temporarily. Those present in the United States for less than 90 days in the year will be taxed only on gains realized during this period. Those present for more than 90 days will be taxed on all their gains from transactions in this country during the taxable year.

5. Estate tax

Transfers by gift made more than three years before death will not be subject to tax as a transfer in contemplation of death. In the case of a transfer made less than three years before death, the burden of proof that it was not made in contemplation of death rests on the estate.

The deduction for support of a decedent's dependents during settlement of the estate was eliminated.

Proceeds of insurance purchased by a decedent upon his own life with premiums paid before January 10, 1941, will not be included in his gross estate by reason of his retention of a reversionary interest after that date unless this interest arose by the express terms of the life insurance policy or other instrument, and at some time after

January 10, 1941, had a value in excess of 5 percent of the value of the policy.

6. Excise taxes

The act includes a number of excise tax amendments, the most important of which are provisions for extending the 10 percent manufacturers' tax on radios to television sets and the 10 percent manufacturers' tax on refrigerators to deep freeze units. The annual occupational tax on coin-operated gaming devices was increased from \$100 to \$150.

The taxes on transportation of property and persons were extended to cover payments made outside the United States for travel which begins and ends in the United States or for the transportation of property from one point in the United States to another.

To avoid discrimination against regular retail sales outlets, sales of fur and jewelry at auction on behalf of a person not engaged in the business of selling these articles were made subject to the retail taxes. However, an exemption was granted for the first \$100 for fur and jewelry sold at auction at the home of a person on whose behalf the sale takes place.

Articles sold at retail by the United States or by any of its instrumentalities or agencies, such as post exchanges and ships' service stores, were made subject to the retail taxes.

7. Miscellaneous income tax amendments

The act also made a number of amendments to the income tax provisions of the Internal Revenue Code.

Dealers in tax-exempt securities will be required to amortize premiums paid with respect to "short-term municipal bonds" which are held more than 30 days and have a maturity or call date not more than 5 years from the date of acquisition.

The privilege of amortizing a bond premium will be denied where the premium is attributable to a conversion feature of the bond.

Newspapers and periodicals will be permitted to deduct as ordinary expenses all expenditures incurred in connection with building up circulation except expenditures for the purchase of land or depreciable property or for the acquisition of circulation through the purchase of other newspapers or periodicals.

Filing and payment dates for fiduciaries of estates and trusts are changed.

Tax withheld at source on the income of nonresident aliens and foreign corporations will be paid on or before March 15 instead of June 15.

The act restores, with respect to certain corporate distributions made pursuant to liquidations during 1951, the provisions relating to election by stockholders as to recognition of gain.

Gross income from mineral properties, which is the basis for computing percentage depletion, may include transportation expenses to plants in which ordinary treatment processes are applied, if the plants are not more than 50 miles from the mine. Transportation for a greater distance may be allowed under a determination by the Secretary of the Treasury that it is necessary to transport the mineral a greater distance to the plant.

Rules are provided for the treatment as taxable dividends of certain corporate distributions by a subsidiary corporation to its stockholders in payment for stock in its parent corporation.

Corporate distributions in redemption of stock included in a decedent's gross estate, if made for the purpose of paying death taxes, will not be treated as taxable dividends.

A new section is added to liberalize the tax treatment of the income realized by an individual as a result of the exercise of certain types of stock options granted by his employer corporation.

A number of amendments were made with respect to the application of the income tax to citizens and aliens resident in Puerto Rico.

Regulated investment companies will be permitted to treat as dividend distributions during the taxable year certain dividends declared after the close of the year.

II. Social Security Act Amendments of 1950

The Social Security Act Amendments of 1950 which were approved on August 28, 1950, had been under consideration in Congress since early in 1949. The President in his Message on the State of the Union on January 5, 1949, recommended to the Congress that the social security program be expanded both as to size of benefits and extent of coverage. Following extensive public hearings on the Administration's social security program before the House Committee on Ways and Means, Chairman Doughton introduced H. R. 6000. The House passed the measure on October 5, 1949. The Senate Committee on Finance held public hearings on the bill early in 1950. An amended bill was passed by the Senate on June 20, the conference committee filed its report on August 1, and the act was finally approved on August 28, 1950 (Public Law 734, 81st Congress).

The most important changes made by the law relate to the oldage and survivors insurance system and to the public assistance and child welfare provisions of the Social Security Act. Coverage under old-age and survivors insurance was extended to about 10 million additional persons. The new categories include nonfarm self-employed, domestic workers, regularly employed farm workers, employees of nonprofit organizations (voluntary coverage), employees of State and local governments (voluntary coverage except for a small number of transit workers who would be compulsorily covered), Federal civilian employees not under a retirement system, employees outside the United States, employees in Puerto Rico and the Virgin Islands, and certain other groups, such as salesmen and industrial home workers, which were specifically included in the new definition of "employee," The new coverage provisions are effective January 1, 1951.

Benefits were increased for those currently receiving benefits by about 77½ percent on the average. Increases ranged from about 50 percent for the highest benefit group to about 100 percent for the low benefit groups. The average primary benefit of approximately \$26 per month for a retired insured worker was increased to about \$46. Ben efit increases became effective September 1950.

A new benefit formula for persons retiring in the future was adopted. Benefits based on the new formula were to be paid first in May 1952. Persons coming on the rolls before that time would have their benefits computed under the present formula, together with the increases provided for those now receiving benefits. Average benefit amounts in the next decade would be about 110 percent higher than under existing law.

Eligibility requirements for insurance benefits were revised so that many persons now 65 or over would be able to draw retirement benefits immediately and the aged in the newly covered groups would be able to qualify more quickly for benefits.

Major revisions were made in the financing provisions of old-age and survivors insurance. The maximum amount of annual earnings subject to tax was increased from \$3,000 to \$3,600, beginning January 1, 1951. The payroll taxes on employers and employees would remain at the present 1½ percent rate on each until January 1, 1954. The rates on each thereafter would be: 1954–59, 2 percent; 1960–64, 2½ percent; 1965–69, 3 percent; 1970 and thereafter, 3½ percent. The rate for self-employed would be 1½ times the above rates or ¾ of the combined employee-employer rates.

A number of amendments were made to the public assistance and child welfare programs. Federal aid to the States for these programs would be increased by about \$180 million to \$200 million annually.

The provisions for Federal loans to State unemployment insurance agencies was extended for the two years 1950 and 1951.

INTERNATIONAL FINANCIAL AND MONETARY DEVELOPMENTS

In the course of the fiscal year under review many countries, particularly in Europe, made substantial progress in restoring their economies. The physical volume of production generally increased, and important steps were taken toward bringing the world economy into better balance. The devaluation of currencies taking place in September 1949 was the most conspicuous of these steps. The course of steady adjustment in the postwar world continued through most of the year, and progress was made toward greater balance in international trade and payments. Shortly before the close of the fiscal year the invasion of the Republic of Korea presented the countries of the free world with a new range of problems. It made clear the necessity for more extended defense measures, which are having important repercussions on international monetary and financial affairs.

United States Economic Assistance Programs

United States economic assistance, from all sources, to countries participating in the European Recovery Program in the fiscal year 1950 aggregated \$4.0 billion, compared with \$5.0 billion utilized in 1949. As originally expected, the need for extraordinary assistance from the United States was greatest in the initial period of the program when the European economies lacked essential foodstuffs and raw materials to keep their economies in operation and to restore their standards of living. Consequently, a tapering off of United States assistance, contemplated from the beginning, was carried into effect in the course of the fiscal year.

An important change in the form of United States assistance to Europe was the increasing proportion made available in grants. In the first appropriation made under the Economic Cooperation Act, \$4.0 billion was provided to be used as loans or grants by the Administrator in consultation with the National Advisory Council. The act also made available a sum of \$1.0 billion derived from public debt transactions which could be used only for making loans and guaranties.\(^1\) The laws governing operations in the fiscal year 1950 provided \$150 million restricted to loans. The legislation continuing the program for 1951 eliminated a mandatory requirement of loans as part of the European Recovery Program. In the fiscal year 1950 assistance utilized by the participating countries under the program amounted to \$3.4 billion. Of this sum, \$2.7 billion was in the form of grants, about \$586 million in the form of conditional aid, and \$132 million in the form of loans.

Of this amount \$300 million was made available for guaranties of exchange convertibility of income and repatriation of American private capital investments in ERP countries.

In addition to assistance voted to the European countries by the Congress, appropriations were made for economic assistance to non-European countries, principally in Asia. There was a special program for economic recovery in Korea administered by the Economic Cooperation Administration for which appropriations for the fiscal year were \$120 million. There were other programs of assistance to Asiatic countries, principally Japan and the Philippines. The total assistance utilized by all Asiatic countries totaled \$614 million in grants and \$94 million in credits.

TECHNICAL ASSISTANCE

The President's Point Four Program has the objectives of extending technical assistance and encouraging capital investment in the underdeveloped areas of the world. In June 1949 the President, in a message to the Congress, recommended enactment of legislation to authorize the program, and implementing bills were introduced in the Congress. Extensive hearings were held during 1949, but Congress adjourned before action was taken on the proposed legislation. During 1950 the technical assistance program was considered by the Congress and included in title IV of the Foreign Economic Assistance Act of 1950 as the Act for International Development. The Congress authorized \$35.0 million for the purpose of the Point Four Program.

Under the technical assistance program the United States will, in some cases, provide funds to the United Nations and other international agencies, and in other cases will make cooperative agreements with particular countries. These programs will thus be, in part, an extension of activities already in effect. Certain existing technical assistance programs with special objectives, such as those under the Economic Cooperation Administration, will not be included under the new authority.

EUROPEAN RECOVERY

The countries participating in the European Recovery Program as a whole continued to raise their levels of production. By June 1950, in most instances, industrial production had exceeded prewar levels. Agricultural production also had increased considerably over the preceding years. This recovery in industrial and agricultural production was reflected, in part, by changes in the commodity composition of United States assistance to the European countries which, to an increasing degree, was directed toward supplying industrial equipment to replace worn out or obsolete capital goods and facilitating a rise in the per capita standards of living. It also brought into clearer focus the basic problem of trade, both within Europe and between

Europe and the United States and other parts of the world. With more production, the possibilities of economically desirable and profitable trade increased. But the expansion of trade did not keep pace with the increase in production. It was for this reason that particular importance attaches to the currency readjustments and to other measures designed to increase the flow of trade. In the course of the year several of the participating countries made further progress toward internal financial stability as indicated by relatively stable price levels. In the second half of the year they also were able to reduce their trade deficits with the dollar area without impairing their levels of production and standards of living.

To deal with the problem of trade in Europe, the countries participating in the European Recovery Program reached an Agreement on Intra-European Payments and Compensations in October 1948. This agreement was projected to deal with the problem of intra-European trade under prevailing conditions of currency inconvertibility and inadequate monetary reserves. This arrangement was made at a time when the recovery; and hence the trade, of the European countries had developed at uneven rates. The mechanism established provided for the settlement of balances arising in the trade of European countries with each other by the extension of socalled "drawing rights," which the countries with a surplus would make available to countries with a deficit on their current account The United States supported this device by making transactions. part of its assistance available to the participating countries in the form of "conditional aid," i. e., the grants to some countries were made on condition that they provide drawing rights for others. While this method did not increase the total of United States assistance, it facilitated the operation of the payments mechanism. agreement, however, did not provide for any specific reduction of the trade restrictions already in existence.

The European Payments Union, which came into effect in 1950, represents a more advanced attempt to deal with the problem of European trade and to further European integration. Under the new plan the countries participating agreed to undertake successive reductions in their trade barriers, while at the same time balances arising could be settled multilaterally through the payments mechanism established. The Congress, in the Foreign Economic Assistance Act of 1950, authorized the Administrator for Economic Cooperation "to transfer funds directly to any central institution . . . to be used on terms and conditions specified by the Administrator to facilitate the development of transferability of European currencies, or to promote the liberalization of trade by participating countries with one another and with other countries."

EXCHANGE RATE ADJUSTMENTS

The rates of exchange for the currencies of the world had been set. for the most part, during the war and the period immediately following With changes in price levels, production, and trade, these rates. had become increasingly less satisfactory as means of bringing about equilibrium in the balances of payments of the countries of the world with each other and with the United States economy. International Monetary Fund provided a mechanism for the orderly adjustment of exchange rates, most countries had been reluctant to change their rates until such time as they could bring about better control of their internal finances and until increased levels of production would enable them more easily to expand foreign trade. pressure for exchange rate adjustment had, accordingly, increased in the postwar period and the need became greater with the slump in international commodity trade in the course of 1949. The devaluation of the pound sterling in September 1949 by 30.5 percent was followed by the devaluations of many other currencies. The extent of the adjustment varied from country to country as shown by the reports of the National Advisory Council. (See exhibit 27, infra p. 309.) The revaluation of currencies in relation to the dollar made possible the adjustment of trade with the Western Hemisphere and so contributed to the reduction in the current dollar deficits of other countries. By the close of the fiscal year trade had begun to increase again and, in some instances, countries had increased their monetary reserves.

United States Participation in the International Monetary Fund and the International Bank for Reconstruction and Development

The National Advisory Council, established by the Bretton Woods Agreements Act, continued to exercise its function of coordinating the activities of the United States representatives on these international bodies with the activities of the financial agencies of the United States Government. In accordance with law, the Council submitted its semiannual reports and its Second Special Report (biennial) on the Fund and the Bank (see exhibits 27, 28, and 29).

The International Monetary Fund has as one of its purposes "to assist in the establishment of a multilateral system of payments in respect of current transactions between members and in the elimination of foreign exchange restrictions which hamper the growth of world trade." The Articles of Agreement provide, however, for an initial transitional period during which restrictions already in effect can be continued. After 1952 the Fund must be consulted on the

907795---51-----5

retention of restrictions on current account transactions. As one of the steps in carrying out its responsibilities, the Fund presented its first annual report on exchange restrictions (March 1, 1950) in accordance with the requirements of its Articles. While this report regretfully notes the relatively slight progress made since the war in eliminating such restrictions, the Fund's comprehensive study of the regulations in force is a step toward the realization of one of the Fund's basic objectives.

The International Monetary Fund has continued to play an important role in advising its members on international exchange and monetary problems. At the request of its members, it has sent missions to them and consulted with the governments in the adjustment of exchange rates, currency controls, and exchange practices. The exchange adjustments which took place in 1949 were made in accordance with the Fund's Articles and in agreement with the Fund, after extensive studies of the problem by the member countries, as well as the Fund. In view of the conditions which prevailed through this period, the Fund's exchange transactions were relatively small. The importance of its activities, however, should not be measured in terms of the amount of currency sold, but rather in terms of the Fund's influence on the development of a code of fair practice in the field of international currency and exchange arrangements.

As shown in greater detail in the reports of the National Advisory Council, the International Bank for Reconstruction and Development expanded its loans in the course of the year, especially for economic development programs, e. g., India, Mexico, Brazil, El Salvador, and Iraq. In the course of the fiscal year new loans aggregating \$166.3 million (less cancellations of \$7.4 million) were made by the Bank. These loans were financed in large part from the United States subscription. The Bank has also floated its securities on the United States market and in January 1950 refunded an earlier issue of \$100 million of its bonds and so reduced the cost of funds borrowed in our markets. In the course of the year the Bank further expanded its technical assistance activities in the member countries by sending missions to assist them in formulating development programs and to supply technical assistance in other related financial matters.

THE EXPORT-IMPORT BANK OF WASHINGTON

The Export-Import Bank of Washington, as the agency of the United States Government established to make foreign loans, has consulted with the Council on proposed credits. During the fiscal year the Export-Import Bank authorized new credits totaling approximately \$405.5 million, principally loans to Latin American countries

and Indonesia. The Bank also continued to administer the loans under the Foreign Assistance Act of 1948, as amended, on behalf of the Economic Cooperation Administration.

THE UNITED STATES-MEXICAN STABILIZATION AGREEMENT

In 1947 the Secretary of the Treasury made an agreement for the stabilization of the Mexican peso-dollar exchange rate whereby inter alia the Treasury undertook to purchase, on request, pesos up to the equivalent of \$50 million. In 1948 Mexico ceased to support the par value of the peso. In June 1949, following the acceptance by the International Monetary Fund of a new par value of 8.65 pesos to the dollar, the Secretary entered into a Supplemental Stabilization Agreement which added \$12 million to the \$13 million remaining unutilized under the original agreement. Mexico did not find it necessary to sell pesos to the Stabilization Fund under this supplemental agreement. The experience of Mexico under the new rate has been notably successful as indicated by the substantial increase in its monetary reserves. On January 2, 1950, Mexico repurchased pesos from the United States Stabilization Fund in an amount equivalent to \$22 million, and, after the close of the fiscal year, an additional sum of pesos equivalent to \$15 million. all of the pesos previously purchased by the Stabilization Fund have been repurchased by Mexico. The Stabilization Agreement continues in effect until July 1, 1951.

GOLD POLICY AND TRANSACTIONS

During the year the Treasury maintained without change its policy of standing ready to buy gold at the official price of \$35 per fine troy ounce from all legal holders and also to sell gold freely, at the official price, to foreign governments and central banks for all legitimate monetary purposes. A handling charge of % of 1 percent is applied to both types of transactions. The Treasury also continued to sell gold for industrial, professional, and artistic purposes.

Concrete evidence of the improvement in the international financial positions of other countries as a whole appeared during the fiscal year in the monetary gold transactions of the Treasury. In the fiscal years 1947, 1948, and 1949, net sales of monetary gold by foreign countries to the United States Treasury totaled \$1.8 billion, \$2.5 billion, and \$1.0 billion, respectively. Net sales at such rates could not have been kept up for very long. In the fiscal year 1950, gross sales of gold to the United States decreased to \$422.7 million, and gross purchases of gold from the United States by foreign governments and central banks increased to \$706.8 million, leaving a net

movement to other countries of \$284.1 million. The turning point from a net movement of gold to the United States to a net movement from the United States coincided with the currency devaluations in September 1949, but the change at that time was a continuation of trends toward increasing foreign purchases of gold from the United States and decreasing foreign sales of gold to the United States, which were already clearly in evidence.

The gold and short-term dollar assets of foreign countries (exclusive of the Soviet Union and international organizations) dropped from \$19.9 billion on June 30, 1945, to \$14.7 billion on June 30, 1949, and then rose to \$16.6 billion by June 30, 1950. Thus, in the last year there has been some reconstruction of reserves on the part of some countries, but it has not as yet progressed to the point where most countries have reestablished reserves equal to those formerly maintained. The gold stock of the United States on June 30, 1950, was \$24.2 billion.

ESTIMATES OF RECEIPTS

(On the basis of existing legislation)

The Secretary of the Treasury is required each year to prepare and submit in his annual report to the Congress estimates of the public revenue for the current fiscal year and for the fiscal year next ensuing (Public No. 129, 59th Congress, February 26, 1907). The estimates of receipts from taxes and customs are now made by the Treasury Department each year on the basis of legislation existing at the time of making the estimates. The estimates of miscellaneous receipts are prepared in general by the agency depositing the receipts in the Treasury.

The details of estimated and actual receipts are shown in table 116, which includes receipts under proposed legislation. The term "net budget receipts" as used in this report has the same significance as the term "budget receipts" used in the Budget document.

TOTAL AND NET BUDGET RECEIPTS

Net budget receipts are estimated to be \$44,511.9 million in the fiscal year 1951 and \$55,138.4 million in the fiscal year 1952. The amount estimated to be received in 1952 represents the all-time peak in receipts and is \$10,376.8 million greater than the previous record of \$44,761.6 million received in 1945. The estimated increases in receipts in 1951 and 1952 result primarily from the estimated large increases in receipts from the corporation income and excess profits taxes and the individual income tax.

Total receipts (daily Treasury statement basis), before deductions for refunds and appropriation to the Federal old-age and survivors

insurance trust fund, are estimated in the amounts of \$49,807.5 million in 1951 and \$61,664.3 million in 1952. Both estimates represent substantial increases over actual total receipts of \$41,310.6 million in 1950.

As shown in the following table of percentage distribution, the individual income tax and corporation income and excess profits taxes continue to be by far the two most important sources of receipts. The corporation tax remains the lesser of the two but shows a decided gain in the fiscal year 1952. As a result of the large increases in receipts from individuals and corporations, miscellaneous internal revenue shows a decline percentagewise in both the fiscal years 1951 and 1952, although increasing in absolute amount for both years. Employment taxes show a steady increase from 1949 principally as a result of increases in the tax rates and coverage. Customs receipts, although increasing in absolute amounts, are estimated to decline as a percentage of total receipts in 1952. Miscellaneous receipts are expected to decline percentagewise in both 1951 and 1952.

FISCAL YEAR 1951

Actual receipts in the fiscal year 1950 and estimated receipts in 1951 are compared by major sources in the following table.

Source ·	Actual, 1950	Estimated, 1951	Increase, or decrease (-)		
	In millions of dollars				
Individual income tax Corporation income and excess profits taxes. Miscellaneous internal revenue. Employment taxes 1 Customs. Miscellaneous receipts.	17, 408. 3 10, 854. 4 8, 303. 1 2, 892. 0 422. 7 1, 430. 2	21, 599. 0 13, 560. 0 8, 950. 0 3, 773. 8 600. 0 1, 324. 7	4, 190. 7 2, 705. 6 646. 9 881. 8 177. 3 —105. 5		
Total receipts	41, 310. 6	49, 807. 5	8, 496. 9		
Appropriation to Federal old-age and survivors insurance trust fund. Refunds of receipts.	2, 106. 4 2, 159. 5	2, 960. 0 2, 335. 5	853. 6 176. 0		
Net budget receipts	37, 044. 7	44, 511. 9	7, 467. 2		

Includes Railroad Unemployment Insurance Act receipts.

Net budget receipts in the fiscal year 1951 are estimated to amount to \$44,511.9 million, an increase of \$7,467.2 million over actual net budget receipts in 1950. All major tax sources of receipts contribute to the increase. The largest estimated increases are in the individual income tax and corporation income and excess profits taxes.

Individual income taxes.—The details of the yield of the individual income tax are shown in the following table.

Source	Actual, 1950	Estimated, 1951	Increase		
	In millions of dollars				
Withheld	10, 073. 2 7, 335. 1	13, 202. 0 8, 397. 0	3, 128. 8 1, 061. 9		
Total individual income tax	17, 408. 3	21, 599. 0	4, 190. 7		

Receipts from income tax withheld are estimated to increase sharply as a result of an estimated increase in salaries and wages and the increased withholding tax rates enacted by the Revenue Act of 1950 which were increased effective October 1, 1950. Receipts from income tax not withheld are estimated to increase as a result of expected higher levels of income and the increased tax rates effective on calendar year 1950 incomes under the Revenue Act of 1950.

The Revenue Act of 1950 increased individual income tax liabilities substantially for the calendar year 1951 and increased calendar year 1950 liabilities by approximately one-quarter of this amount. Individual income tax receipts not withheld for the fiscal year 1951 represent principally calendar year 1950 liabilities and therefore do not reflect the full effect of the Revenue Act of 1950.

Corporation income and excess profits taxes.—Corporation taxes in the fiscal year 1950 reflect incomes of the calendar years 1948 and 1949, while receipts in the fiscal year 1951 reflect incomes of the calendar years 1949 and 1950.

The substantial increase of \$2,705.6 million in receipts estimated for the fiscal year 1951 over actual collections of \$10,854.4 million in 1950 is attributable to several factors. Corporation incomes in the calendar year 1950 were at a very high level. In addition, several changes in the laws affecting income and excess profits taxes on corporations will result in increased collections from this source.

The Revenue Act of 1950 increases tax rates on incomes for the taxable year 1950 up to four percentage points. It also provides for an acceleration in corporation tax payments, which will result in a larger proportion of the 1950 tax liability being collected in the fiscal year 1951. A second revenue measure, the Excess Profits Tax

Act of 1950, approved January 3, 1951, reinstituted an excess profits tax, which will affect approximately one-half of the 1950 income.

Miscellaneous internal revenue.—Collections from this source by major groups are listed in the following table.

Source	Actual, 1950	Estimated, 1951	Increase, or decrease (—)	
	In millions of dollars			
Estate and gift taxes Liquor taxes Tobacco taxes Stamp taxes Manufacturers' excise taxes Retailers' excise taxes Miscellaneous taxes Adjustment to daily Treasury statement basis	706. 2 2; 219. 2 1, 328. 5 84. 6 1, 826. 7 409. 1 1, 721. 2 +7. 5	710. 0 2, 396. 0 1, 365. 0 107. 0 2, 088. 0 455. 0 1, 829. 0	3. 8 176. 8 36. 5 22. 4 261. 3 45. 9 107. 8 7. 5	
Total miscellaneous internal revenue	8, 303. 1	8, 950. 0	646. 9	

Estate and gift tax collections are estimated to increase slightly in the fiscal year 1951. The large increase in estimated receipts from the excise taxes in 1951 over actual receipts in 1950 reflects anticipated higher levels of income. Contributing to the increase are the war-scare purchases at the outbreak of the Korean conflict, especially in the manufacturers' excise taxes and liquor taxes. Collections from the other excise taxes reflect current consumption trends.

Employment taxes.—Receipts from the various employment taxes are summarized in the following table.

Source	Actual, 1950	Estimated, 1951	Increase		
	In millions of dollars				
Federal Insurance Contributions Act Federal Unemployment Tax Act Railroad Retirement Tax Act Railroad Unemployment Insurance Act 1	2, 106. 4 226. 3 550. 2 9. 1	2, 960. 0 239. 0 565. 0 9. 8	853. 6 12. 7 14. 8		
Total employment taxes. Deduct: Appropriation to Federal old-age and survivors insurance trust fund.	2, 892. 0 2, 106. 4	3, 773. 8 2, 960. 0	881. 8 853. 6		
Net employment taxes.	785. 6	813. 8	28. 2		

¹ Not classified as an employment tax under the Internal Revenue Code,

The estimated increase in employment tax receipts in the fiscal year 1951 is attributable primarily to the increase in receipts under the Federal Insurance Contributions Act. Receipts from this tax reflect the full-year effect of the increase in the tax rate from 1 percent to 1½ percent each on employer and employee, effective January 1, 1950; and, in addition, collections in the latter part of the fiscal year 1951 will be affected by two important changes effective January 1, 1951. These are an increase in the tax base limitation from \$3,000 to \$3,600 and a significant extension of coverage. Receipts from all

employment taxes are expected to increase because of anticipated higher salaries and wages.

Customs.—Customs receipts are estimated to amount to \$600.0 million in the fiscal year 1951, an increase of \$177.3 million over actual receipts of \$422.7 million in 1950.

Miscellaneous receipts.—Miscellaneous receipts are estimated to be \$1,324.7 million in the fiscal year 1951, a decrease of \$105.5 million from 1950.

Refunds of receipts.—Refunds of receipts are estimated to be \$2,335.5 million in the fiscal year 1951 as compared with \$2,159.5 million in 1950.

FISCAL YEAR 1952

Estimated receipts in the fiscal years 1951 and 1952 are compared by major sources in the following table.

Source	Estimated, 1951	Estimated, 1952	Increase		
	In millions of dollars				
Individual income tax. Corporation income and excess profits taxes. Miscellaneous internal revenue. Employment taxes 1 Customs. Net budget receipts	44, 511. 9	55, 138. 4	10, 626. 5		

¹ Includes Railroad Unemployment Insurance Act receipts.

Net budget receipts in the fiscal year 1952 are estimated to amount to \$55,138.4 million, an increase of \$10,626.5 million over 1951 and \$10,376.8 million greater than the previous peak year of 1945. All major sources of receipts contribute to the increase, with the largest increases appearing in corporation income and excess profits taxes and individual income taxes.

Individual income taxes.—The detail of the yield of the individual income tax is shown in the following table.

Source	Estimated,	Estimated, 1952	Increase
	In millions of dollars		
Individual income tax: Withheld. Not withheld.	13, 202. 0 8, 397. 0	16, 358. 0 9, 667. 0	3, 156. 0 1, 270. 0
Total individual income tax	21, 599. 0	26, 025. 0	4, 426. 0

Receipts from income tax withheld are estimated to increase by \$3,156.0 million in 1952, principally because of an estimated increase in the level of salaries and wages for 1952. In addition, the fiscal year 1952 reflects a whole year of withholdings at the increased rates of the Revenue Act of 1950 which are effective for approximately three quarters of the fiscal year 1951. Income tax not withheld increases as a result of the higher level of income and the higher rates imposed by the Revenue Act of 1950, which are fully effective on the incomes reflected in fiscal year 1952 receipts.

Corporation income and excess profits taxes.—Corporation income and excess profits taxes are estimated to amount to \$20,000.0 million in the fiscal year 1952, an increase of \$6,440.0 million over 1951. The large increase in estimated receipts arises from the higher level of corporate profits and from the progressively greater effects of changes embodied in the Revenue Act of 1950 and the Excess Profits Tax Act of 1950.

The Revenue Act of 1950 increases the combined normal and surtax rates on calendar year corporations from 42 percent of 1950 net income to 45 percent of 1951 net income. The Excess Profits Tax Act of 1950 increases the corporation surtax rate by an additional 2 percent for taxable years beginning on or after July 1, 1950.

The impact of the excess profits tax will also become progressively greater on calendar year 1951 incomes. In the calendar year 1950 the tax is proportionate to the part of the taxable year after June 30, 1950, whereas all income for the calendar year 1951 is taxable.

Collections from both the income tax and the excess profits tax in the fiscal year 1952 will also be increased by the continued acceleration of installment payments provided in the Revenue Act of 1950.

Miscellaneous internal revenue.—Collections from this source by major groups of taxes are shown in the table following.

Source	Estimated, 1951	Estimated, 1952	Increase, or decrease (—)	
	In millions of dollars			
Estate and gift taxes. Liquor taxes. Tobacco taxes. Stamp taxes. Manufacturers' excise taxes. Retailers' excise taxes. Miscellaneous taxes.	710. 0 2, 396. 0 1, 365. 0 107. 0 2, 088. 0 455. 0 1, 829. 0	755. 0 2, 569. 0 1, 391. 0 107. 0 1, 757. 0 497. 0 1, 901. 0	45.0 173.0 26.0 —331.0 42.0 72.0	
Total miscellaneous internal revenue	8, 950. 0	8, 977. 0	27.0	

All major groups except manufacturers' excise taxes and stamp taxes contribute to the increase in estimated receipts from miscellaneous internal revenue for the fiscal year 1952. Manufacturers' excise taxes are estimated to decline sharply as a result of expected material shortages. Other excise tax groups increase generally as a result of an anticipated increase in levels of income. Estate and gift tax collections are estimated to continue to increase.

Employment taxes.—The yields of the various employment taxes under existing legislation are shown in the following table.

Source	Estimated, 1951	Estimated, 1952	Increase
	. In r	nillions of do	llars
Federal Insurance Contributions Act. Federal Unemployment Tax Act. Rållroad Retirement Tax Act. Railroad Unemployment Insurance Act ¹ .	2, 960. 0 239. 0 565. 0 9. 8	3, 823. 0 263. 0 613. 0 10. 0	863. 0 24. 0 48. 0
Total employment taxes. Deduct: Appropriation to Federal old-age and survivors insurance trust fund.	3, 773. 8 2, 960. 0	4, 709. 0 3, 823. 0	935. 2 863. 0
Net employment taxes	813.8	886. 0	72. 2

¹ Not classified as an employment tax under the Internal Revenue Code.

Receipts from employment taxes in the fiscal year 1952 are estimated to increase over fiscal year 1951 receipts as a result of higher levels of salaries and wages, of the full-year effect of the increase in the tax base limitation from \$3,000 to \$3,600, and of the extended coverage under the Federal Insurance Contributions Act effective January 1, 1951. An additional factor is that receipts in the fiscal year 1952 will reflect for the first time collections from the self-employed category of the new coverage.

Customs.—Customs receipts are estimated to be \$620.0 million in the fiscal year 1952, an increase of \$20.0 million over 1951.

Miscellaneous receipts.—Miscellaneous receipts are estimated at \$1,333.3 million in the fiscal year 1952, approximately the same as 1951.

Refunds of receipts.—Refunds of receipts in the fiscal year 1952 are estimated to increase to \$2,702.9 million from \$2,335.5 million in 1951 as a result of the higher level of withholding tax receipts in the calendar year 1951.

ESTIMATES OF EXPENDITURES

Actual expenditures for the fiscal year 1950 and estimated expenditures for the fiscal years 1951 and 1952 are summarized in the following table. Further details will be found in table 116. The estimates are based upon figures submitted to the Congress in the Budget for 1952.

years 1951 and 1952.

The Federal National Mortgage Association was transferred from the Reconstruction Finance Corporation to the Housing and Home Finance Agency, effective Sept. 7, 1950.

ADMINISTRATIVE REPORTS

59

ADMINISTRATIVE MANAGÉMENT

The importance of improving the administration of the Government was reaffirmed on July 29, 1949, when the President issued Executive Order 10072, calling for aggressive, systematic appraisal and improvement of operations. Shortly after, on August 9, the Secretary of the Treasury assigned to the Treasury Department Management Committee responsibility for advising and assisting him in carrying out the directives of the Executive order and accelerating the Department management program established in 1946. Supporting the work of this Committee are the management committees of the several offices. The Department program has been directed toward reducing costs, improving efficiency, and giving better service to the public. While many diverse, technical changes in management and operating procedures are involved, they amount in the aggregate to substantial savings in terms of dollars. In many instances these savings are recurring and cumulative.

Summarized here are some of the management developments in the Treasury Department which have occurred during the year. These will indicate the progress made during 1950 on the foundation described in the 1949 annual report on pages 35 through 58. The administrative reports of the individual organizations of the Department integrate management improvements with their operations

(pages 65 through 136).

Of Government-wide scope is the continuing work on the program to improve Federal accounting and financial reporting. This project was announced jointly in January 1949 by the Secretary of the Treasury, the Comptroller General of the United States, and the Director of the Bureau of the Budget, who are directing the undertaking. In addition to establishing in all departments and agencies accounting and reporting principles and standards suited to the Government's requirements, objectives include the strengthening of the facilities in the Treasury as the center for current accounting and over-all financial reports; making available for executive and legislative purposes more informative financial data at lower accounting costs; improving budgetary processes; and improving audit and control.

Legislation to provide a modern budget, accounting, and audit law was introduced and considered by the Congress during the fiscal year. The measure did not become law, however, until September 12, 1950. This law, the Budget and Accounting Procedures Act of 1950 (see exhibit 36), was cited by the President as the most important piece of legislation in its field since the Budget and Accounting Act, 1921, was enacted almost thirty years before. The new law assigns important responsibilities to the General Accounting Office, Bureau of the Budget, Treasury Department, and every other executive department and agency in the related fields of budgeting, accounting, financial reporting, and auditing. While the law makes a clear division of responsibilities and duties, it provides for their exercise in proper relationship and in harmony with the common objectives

of achieving an integrated system for the Government. features of the legislation are the following: (1) Recognition is given to the joint accounting program of the General Accounting Office, Treasury Department, and Bureau of the Budget as a permanent function, (2) a performance type of Budget is called for with considerable latitude for the President to determine the form in which the Budget shall be presented, (3) the prescribing of accounting requirements by the Comptroller General is to be largely on the basis of principles, standards, and related matters of fundamental importance rather than detailed procedures, (4) the responsibility for establishing and maintaining systems of accounting and internal control, which will fulfill certain specified needs, is placed directly with each executive agency, (5) responsibility is placed on the Secretary of the Treasury to furnish over-all reports on the results of the financial operations of the Government and to organize the Treasury Department's accounting and reporting in a manner to provide an operating center for that purpose, (6) authority is given the Secretary of the Treasury and Comptroller General jointly to modify procedures which involve the issuance and countersignature of warrants for the receipt, retention, and disbursement of public moneys and trust funds, in the interest of simplification and economy, (7) authority is given the Comptroller General to discontinue in the General Accounting Office appropriation, expenditure, limitation, receipt, and personal ledger accounts, (8) authority is given the Comptroller General to make comprehensive audits at the site of operations and leave documents supporting financial transactions with the agencies whose accounts are audited, and (9) authority is given to the heads of executive agencies to decide where the administrative examination of fiscal officers' accounts will be performed and for the Comptroller General, in appropriate circumstances, to waive the requirement for such examinations.

Within the Treasury Department, revisions of fiscal and accounting systems in accord with this program were under way in several large organizations. In the Bureau of Engraving and Printing the industrial nature of the operations makes them ideally suited to business-type procedures and to a working-capital method of financing. Substantive legislation for this purpose was obtained by the passage of Public Law 656, Eighty-First Congress, approved August 4, 1950. Although this law does not take effect until July 1, 1951, the new system of accounting and budgeting required will be installed during the fiscal year commencing July 1, 1950. Under the new system the Bureau of Engraving and Printing will recover all its costs of operation from the agencies which it services in producing currencies,

securities, stamps, and other classes of engraved work.

A modern accounting system was established in the Coast Guard Headquarters on October 1, 1949, and a pilot installation was made in the 5th Coast Guard District (Norfolk) on March 1, 1950. Based on the results of this experiment, installations were scheduled in five other districts on July 1, 1950, in five more on September 1, 1950, and in the last (Honolulu) on January 1, 1951. A commercial-type accounting system was being installed at the Coast Guard Yard at Curtis Bay, Maryland, on July 1, 1950. This system is designed to

charge against work orders performed the direct costs and the proportionate share of overhead expenses including depreciation and military personnel. Completion of the new system at the Yard was

expected by March 1951.

The entire accounting program in the Coast Guard has been conducted with the active cooperation and assistance of representatives of the joint program for improvement of accounting in the Federal Government. Full time staff representatives have been provided by the Accounting Systems Division of the General Accounting Office and the Bureau of Accounts of the Treasury Department. Many innovations have been effected which required approval of the Secretary of the Treasury and the Comptroller General. Certain of these are being tested in the Coast Guard with a view to general adoption throughout the Federal Government.

The 1949 annual report explained that the survey of a private management engineering firm, completed in January 1948, was made the nucleus of a Customs management improvement program. For the purpose of implementing the firm's recommendations in the accounting and auditing field, a complete review of the accounting system of the Bureau of Customs was made from the standpoint of the joint accounting program which is being carried forward under the leadership of the General Accounting Office, Treasury Department, and Bureau of the Budget. This review was completed in January 1949 and resulted in a recommendation for a somewhat revised system of accounting and internal control with respect to the revenue collecting activities of the Bureau of Customs. The proposed new system is being carefully analyzed and considered by the Bureau of Customs from the management standpoint.

In line with the beginning made in the 1951 Budget in developing a "performance budget" for the entire Government, a program was undertaken in the Treasury Department to install this type of budget in its bureaus, offices, and divisions. This budget analyzes the cost of each activity in relation to its essential purpose and its relative importance. As one means of attaining such a budget, several bureaus have established a performance reporting system which makes

available appropriate management data.

In the Bureau of Internal Revenue the audit control program was instituted in 1950. This program, designed to increase compliance with the revenue laws, employs a sampling technique to determine the over-all pattern of error in tax returns. During 1950, the program was confined to individual income tax returns for the year 1948, but in 1951 it will be directed to business-income and certain excise returns for 1949. The study of samples of the 1948 individual income tax returns revealed that (a) errors in tax liability, excluding those of less than two dollars, were found in 14 million out of 52 million returns; (b) 91 percent of the "errors" were against the Government; (c) understatements in individual income tax aggregated \$1.3 billion, overstatements \$90 million; and (d) the major sources of errors in the 14 million defective returns were income reported incorrectly, 54.9 percent, personal deductions reported incorrectly, 23.4 percent, exemptions claimed improperly, 16 percent, and mathematical errors, only 5.6 percent.

Continuing from last year's activities, procedures throughout the

907795---51-----6

Treasury Department were further improved and simplified during

1950 with some of them crossing bureau and agency lines.

During 1950, the Fiscal Service, working through the Fiscal Service Management Committee, effected management savings totaling more than \$6 million, including savings resulting from improvements initiated during the period 1947–49. Among the improvements adopted by the Fiscal Service were several in the Bureau of Accounts. One of these, a change in the form in which check accounting material is prepared by the Division of Disbursement, has expedited the reconciliation by the General Accounting Office of checking accounts of the Chief Disbursing Officer and Regional Disbursing Officers. The securing of lists of outstanding checks at an earlier date facilitates the handling of check inquiries. The more current reconciliation has reduced the number of requests for stopping payment, to the benefit of the Division of Disbursement, the General Accounting Office, and the Federal Reserve Banks. Earlier advice as to differences in the depositary account is now available and necessary adjustments are thereby accelerated.

In the Bureau of the Public Debt the reduction of five regional offices to three resulted in an annual saving of \$250,000. In the Office of the Treasurer of the United States the payment of Government checks is the operation having the greatest personnel requirements. Cost and production analyses of this operation resulted in reductions in the unit salary costs for processing paper checks and card checks paid in Washington, D. C., of 3 percent and 10 percent, respectively, and 9 percent on card checks paid through the Federal Reserve Banks.

Effective January 1, 1950, the depositary receipt procedure was extended by the Bureau of Internal Revenue, in cooperation with the Fiscal Service, to cover employment taxes, as well as income taxes. Provision was made for payment to the Federal Reserve Banks either directly or through commercial banks. This change makes these funds available on a more current basis for investment by the Federal old-age and survivors insurance trust fund. Before the new procedure was established, commercial banks were compensated for accepting deposits and issuing receipts for withheld taxes. For the half year the new procedure was in operation, savings from elimination of compensation to the commercial banks amounted to \$500,000. In addition the Bureau of Internal Revenue was able to reduce costs through the use of one combined form and one audit for the two kinds of taxes.

Customs procedures likewise were simplified during the year. On an international basis, technical discussions were held of customs procedures and laws affecting trade among 11 countries. A meeting of customs and foreign trade experts of Britain, Canada, and the United States was held from October 31 through November 8, 1949. Subsequently, similar discussions were held with representatives of eight additional countries. Information was exchanged on customs practices, and techniques were explored for classification and valuation of merchandise, assessment of penalties, marking requirements, accounting and auditing, sample-weighing and testing, and treatment of currency exchange practices. The elimination of consular invoice requirements for a substantial portion of imports was announced by the Commissioner of Customs on March 24, 1950, and a new customs

duty bond to expedite clearance of merchandise was provided, to go into effect July 15, 1950.

Legislation was drafted and introduced in Congress to modernize and simplify United States customs requirements beyond the present

limits of administrative action.

Mechanization of operations throughout the Department was continued, with a resulting saving of time and money. The use of electronic devices was expanded. Microfilming in the offices of the Collectors of Internal Revenue of 163 million income tax index cards and 3.8 million tax returns released for other use large numbers of filing cabinets as well as floor space having a substantial annual rental value. The modernization of the intaglio presses in the Bureau of Engraving and Printing ultimately will increase the output of currency by approximately 30 percent. Savings are estimated at over \$1 million a year. Modern machines installed in the Mints have effected great savings in hand labor and in costs.

Decentralization of certain activities of the Bureau of Internal Revenue and certain delegation of authority have resulted in a substantial reduction in the number of employees in Washington. In the field, on the other hand, by temporary centralization the clerical facilities of one office were used for a mass mailing for seven large collection districts. This procedure is to be expanded to handle

forms for 37 collection districts and 42 million taxpayers.

A number of bureaus have initiated higher recruiting standards and comprehensive training programs. The Treasury Department's incentive program, designed to increase efficiency by stimulating employee participation in management, is twofold. Cash awards are paid to employees for operating improvements which result in monetary savings. This new program was established by authority of Public Law 429, 81st Congress, approved October 28, 1949. Second, honorary recognition is granted for exceptional or meritorious service. Provisions for these awards are contained in Treasury Department Order No. 79, dated March 28, 1950.

As the fiscal year closed one of the new awards was granted to a group of 54 employees in the Division of Disbursement, Bureau of Accounts, for efficiency in the tremendous job of issuing checks for the national service life insurance dividends. An estimated savings of \$158,000 were attributed to the work of this group and cash awards totaled \$1,500. In addition, there were twenty individual awards during the year throughout the Department for superior accomplishment. Six employees received exceptional civilian service medals and emblems. Under the cash awards program, there were 2,939 employee suggestions during the year. Of the number acted upon, 915 merited adoption. Of those adopted, 783 were considered eligible for cash awards totaling \$16,355. Savings accruing to the Department from the suggestions adopted were estimated at \$252,000.

BUREAU OF THE COMPTROLLER OF THE CURRENCY 1

The Bureau of the Comptroller of the Currency is responsible for the execution of laws relating to the supervision of national banking associations. Duties of the office include those incident to the forma-

¹ More detailed information concerning the Bureau of the Comptroller of the Currency is contained in the annual report of the Comptroller.

tion and chartering of new national banking associations, the establishment of branch banks, the consolidation of banks, the conversion of State banks into national banks, the issuance and retirement of preferred stock, and the issuance of Federal Reserve notes.

CHANGES IN THE CONDITION OF ACTIVE NATIONAL BANKS

The total assets of the 4,977 active national banks in the United States and possessions on June 30, 1950, amounted to \$89,937 million, as compared with the total assets of 4,993 banks amounting to \$85,099 million on June 30, 1949, an increase of \$4,837 million during the year. The deposits of the banks in 1950 totaled \$82,660 million, which was \$4,208 million more than in 1949. The loans and securities totaled \$68,917 million, an increase of \$5,209 million during the year. Capital funds of \$6,195 million were \$367 million more than in the preceding year.

The assets and liabilities of the active national banks are shown in

the following statement.

Summary of Changes in Number and Capital Stock of National Banks

The authorized capital stock of the 4,979 national banks in existence on June 30, 1950 (including 2 banks that had discontinued business although not in formal liquidation as of that date), consisted of common stock aggregating \$1,964 million, an increase during the year of \$78 million; and preferred stock aggregating \$17 million, a decrease during the year of \$6 million. The total net increase of capital stock was \$72 million. During the year charters were issued to 15 national banks having an aggregate capital of \$3 million of common stock only. There was a net decrease of 15 in the number of national banks in the system by reason of voluntary liquidations and statutory consolidations.

More detailed information regarding the changes in the number and capital stock of national banks in the fiscal year 1950 is given in the following table.

Organizations, capital stock changes, and liquidations of national banks, fiscal year 1950

	Number	Capital stock		
of banks		Common	Preferred	
Charters in force June 30, 1949, and authorized capital	4, 994	\$1, 885, 615, 492	\$22, 566, 975	
Increases: Charters issued Capital stock:	15	2, 875, 000		
130 cases by statutory sale		40, 014, 850 37, 032, 070		
tion 10 cases by statutory consolidation 2 cases by increase in par value of stock		1, 887, 375 1, 818, 500	156, 500 616, 000	
Total increases	15	83, 627, 795	772, 500	
Decreases: Voluntary liquidations	26 4	5, 530, 000	280, 000	
S2 cases by retirement 2 cases by statutory reduction		82,000	6, 492, 282	
Total decreases	30	5, 612, 000	6, 772, 282	
Net change	-15	78, 015, 795	-5, 999, 782	
Charters in force June 30, 1950, and authorized capital stock 1.	4, 979	1, 963, 631, 287	16, 567, 193	

¹ These figures differ from those shown in the preceding table. June 30, 1949, figures include 1 bank with common stock, that was chartered but not open for business on that date. June 30, 1950, figures include 2 banks that had discontinued business but were not in formal liquidation on that date.

BUREAU OF CUSTOMS

The principal functions of the Bureau of Customs are to enter and clear vessels; supervise the discharge of cargo; ascertain the quantities of imported merchandise, appraise and classify such merchandise, and assess and collect the duties thereon; control the customs warehousing of imports; inspect international traffic by vessel, highway, railway, and air; review protests against the payment of duties; determine and certify for payment the amount of drawback due upon the exportation of articles produced from duty-paid or tax-paid imports; prevent smuggling, undervaluations, and frauds on the customs revenue; issue documents and signal letters to vessels and prepare publications and reports in connection therewith; apprehend violators of the customs and navigation laws; enforce the Antidumping and Export Control Acts; and perform certain duties under the Foreign Trade Zones Act.

Management Program

Management improvement efforts in the Bureau were again directed into the five areas covered by the program in 1948 and 1949, and the savings in 1950, both monetary and manpower, were used to cope with the continuing increase in Customs business.

Trade agreement activities.—The Bureau participated in the Annecy Trade Agreement conference which extended the General Agreement on Tariffs and Trade to ten new countries; and, in cooperation with the Department of State, reviewed the proclamations issued in connection with the Annecy and other trade agreements. The Bureau cooperated with the Tariff Commission also in the preparation of a schedule of all United States import duty rates in force on July 1, 1950, for publication by the Commission.

Aids to trade.—Following the Tripartite economic conference, the Bureau carried on discussions of procedural problems affecting trade with representatives of the United States, Great Britain, and Canada, and subsequently with representatives of eight other foreign countries who had similar problems. These discussions pointed up the difficulties experienced by exporters to the United States, and it is believed were of great benefit to the United States and to the participating foreign governments in their efforts to facilitate world commerce.

Procedure simplification.—The use of scientific control weighing and testing procedures, which were adopted in 1949 for sugar, wool, and tobacco, was extended to other products in 1950, and resulted in savings of more than twice the amount which had been estimated.

The system of joint Customs-Immigration preliminary questioning of pedestrian and vehicular traffic at land border ports was extended during 1950 and now is installed on both Canadian and Mexican With a single Government official performing these duties for both the Customs and Immigration Services, substantial savings to each organization resulted, as well as better service to the traveling

A modification in customs regulations relieves importers in many cases from the necessity of supplying certified consular invoices on

several significant categories of importations.

A new customs duty bond and new bonding procedures for import transactions, promulgated late in the fiscal year 1950, will simplify the methods for payment of duties found owing to the Government after the merchandise has left Customs custody and will permit speedier release from Customs custody of packages retained for examination.

In line with the over-all training program of the Bureau, indoctrination of supervisors in work simplification techniques was completed

during 1950.

Public educational aids.—The pamphlet, Customs Information for Exporters to the United States, was completed during 1950 and its initial distribution received widespread approval. As in the case of Customs Hints, every effort is being made to widen its distribution. It has already been translated into 5 foreign languages.

Public response to Customs invitation to visit its local offices in

order to present and discuss problems far exceeded expectations.

Other management control measures.—During 1950, additional authority and responsibility were delegated to the field offices with respect to fiscal and budgetary operations and in connection with the functions directly related to the processing of imported merchandise.

A scientific analysis to determine the number of bales of wool which would have to be sampled in order to accurately gauge the clean content resulted in a reduction in the required number of such bales to be sampled.

Preparatory work was completed during 1950 on the legislative changes required to place in effect many management improvement recommendations, and the Customs Simplification Act of 1950 was introduced in Congress in May 1950. As of the close of the fiscal year, no action had been taken on the bill.

Proposed legislation to revise, consolidate, and codify the navigation laws administered by Customs will be submitted to Congress in the near future. This legislation is designed to facilitate the administration of these laws and to eliminate requirements which burden ship-

ping interests without serving any essential official need.

REVENUE COLLECTIONS

The total revenue collected by Customs in the fiscal year 1950 was \$560,565,350 as compared with \$515,241,518 in 1949, an increase of These totals include items collected for other governmental agencies such as internal revenue taxes for the Bureau of Internal Revenue and head taxes for the Immigration Service. Actual collections from duties, navigation fines, violations of the customs laws, etc., amounted to \$428,891,788, an increase of more than 10 percent from the previous year's total of \$388,470,747. The bulk of customs collections consists of duties paid by importers at the time of the entry of merchandise and when withdrawn from warehouse for consumption. The types of collections for the past two years are shown in table 8.

The increase in collections during the fiscal year 1950 reflected a generally higher level of foreign trade than prevailed during 1949 which more than offset the decrease in rates of duty provided by the Annecy Protocol some of which became effective January 1, 1950, with other subsequent changes in rates of duty as additional signatory nations came under the terms of the Agreement. These changes in rates of duty, however, were less drastic and less numerous than those resulting from the General Agreement on Tariffs and Trade, much of which became effective January 1, 1948.

Customs collections, which had declined almost continuously during the last 10 months of the fiscal year 1949, began to rise very early in the fiscal year 1950. Collections during each of the last 9 months of 1950 were larger than for each of the corresponding months of the previous fiscal year. This trend paralleled the trend in the quantity and value of imported merchandise but was not affected by any increase in prices since the index of the unit cost of imported articles was slightly lower than during the previous year.

The chief source of customs revenue, raw wool, yielded approximately \$50 million, an increase of 30 percent over the revenue from this source during the fiscal year 1949. Importations of wool which yielded \$150 million of revenue in 1946 declined sharply during the following three years. The increased revenue from wool imports in 1950 as compared with the previous year marked the first change in trend since the end of World War II.

Imports of cane sugar, another important source of customs revenue, were almost 700 million pounds smaller in 1950 than during the previous year and yielded only \$34 million in duties as compared with *\$38 million in 1949. Importations of free sugar from the Philippine Islands were practically the same as during the previous year.

Another important source of customs revenue, distilled liquors, showed very little increase. The volume imported increased from 13,522,000 gallons in 1949 to 13,980,000 gallons in 1950, while the revenues increased from \$20,050,000 to \$20,603,000.

The many changes in commodity classifications and the rates of duty resulting from the General Agreement on Tariffs and Trade made it impossible until recently to compute duty collections by tariff schedules and countries for many months of the fiscal years 1948 and 1949. Therefore, tables 84 and 87, showing duty collections by tariff schedules and by countries, which were omitted in the 1949 annual report, are published in this report for the fiscal years 1948, 1949, and 1950. Table 86, duty collections by tariff schedules, shows the months for which computations were not available when

the 1949 report was being prepared.

The largest amount of revenue continued to be collected at New York City where almost \$174 million, or 41 percent of the total customs collections for all districts, was turned over to the Treasury. This constitutes a small increase of \$9 million over the total collected in New York in 1949. Customs collections at the Atlantic and Pacific Coast customs districts were generally at a higher level than in 1949, only Maine, North Carolina, and Oregon showing reduced collections. Collections along the land border were far from uniform. Five of the Canadian border districts reported increased revenues, while an equal number collected a smaller amount than in 1949. Two of the five Mexican border districts showed increased collections, but none of the districts on the Gulf of Mexico collected more than during the

At Boston, where approximately three-fourths of all customs collections are the result of importations of unmanufactured wool, the increased importations of that commodity resulted in an increase in collections of almost 39 percent. At Philadelphia, another important wool importing district, there was an increase of 21 percent in collections. Customs collections by customs districts are shown in table 83.

The increase in customs collections was accompanied by an increase in the value of dutiable imports of from '\$2,849 million in 1949 to \$3,060 million in 1950. This increase in value appears to be due entirely to an increased volume of imported commodities since the unit cost was slightly lower in 1950 than in the previous year.

MOVEMENT OF PERSONS BY VESSELS, TRAINS, AIRPLANES, AND AUTOMOTIVE VEHICLES

The increase in passenger travel evidenced since the end of the war continued during the fiscal year 1950. Almost 87 million persons arrived at this country's seaports and crossed the land borders during 1950, an increase of more than 3 million over the preceding year. For the first time in many years travel by aircraft was slightly lower than for the previous year. Sixteen hundred fewer planes arrived

Revised.

from abroad and 3 thousand fewer passengers used this means of transportation. Almost half of the planes and more than half of the airplane passengers arrived at the airports in New York City and Miami, Fla. The number of passengers arriving at New York, for the first time since the establishment of LaGuardia and Idlewild fields, exceeded those arriving at the Miami fields. Tables 89 and 90 show the volume of traffic into the United States in 1949 and 1950.

During the year Annex 9 to the Convention on International Civil Aviation became effective. This annex contains international customs, immigration, public health, and agricultural quarantine procedures applicable to air traffic. As far as customs is concerned the United States has been among the foremost in bringing its customs procedures into agreement with those adopted by the International Civil Aviation Organization.

Entries of Merchandise

Commercial importations as represented by consumption entries, warehouse entries, and warehouse withdrawals showed a substantial increase over the previous year. The continued increase in tourist travel was reflected in an increase of 7 percent in the number of baggage entries filed, although the amount collected on baggage entries declined as a result of the increase in the exemptions granted to returning travelers. The number of mail entries continued to decline, although collections on such entries were larger than in 1949. Informal entries remained at practically the same level as in the previous year. Table 88 shows the number of important types of entries for the fiscal years 1949 and 1950.

DRAWBACK TRANSACTIONS

Drawback, amounting to 99 percent of the customs duties paid at the time the goods were entered, is allowed on the export of merchandise manufactured from imported materials. The drawback allowed in 1950 was \$8,442,133 as compared with \$9,378,768 in 1949, a decrease of 10 percent. More than 90 percent of the drawback allowed in each year was due to the export of products manufactured from imported raw materials. The more important raw materials used in manufacturing the exported products in 1950 were sugar, wool, tobacco, crude petroleum, and several of the metals. Tables 91 and 92 show the drawback transactions for 1949 and 1950.

PROTESTS AND APPEALS

There was a sharp increase in the number of protests filed by importers against the rate and amount of duty assessed and other actions by the collectors as compared with 1949. Appeals for reappraisement filed by importers who did not agree with the appraiser as to the value of merchandise were also much more numerous than during the previous year. Both increases were presumably due to the continuation of the use of dual currency in many countries with resulting confusion as to the true value of merchandise for customs

purposes. The following table shows the number of protests and appeals filed and acted upon in 1949 and 1950:

Protests and appeals	1949	1950	Percentage increase
Protests: Filed with collectors by importers Allowed by collectors Denied by collectors and forwarded to customs court. Appeals for reappraisement filed with collectors.	10, 635	17, 759	67. 0
	579	3, 104	436. 1
	9, 563	13, 029	36. 2
	11, 114	16, 495	48. 4

Appraisement of Merchandise

The continued increase in the importation of foreign merchandise, both in volume and variety of commodities, is indicated by the examination of 543,772 packages at the public stores during the fiscal year 1950, as compared with 484,760 packages examined during the previous year. The imports in 1950 required the processing of 1,197,539 accompanying invoices as compared with 1,105,646 invoices in 1949.

The handling of foreign mail at Los Angeles, Calif., has been transferred to the building occupied by the appraiser of merchandise. This works to the mutual advantage of the post office and customs and has released needed space to the post office.

Customs Information Exchange

Under a system which has been in effect for many years, appraising officers are required to report to the Customs Information Exchange at New York, N. Y., a cross section of importations of merchandise received at their ports. This serves as a spot check on the classification and valuation of merchandise at the various ports, and makes possible greater uniformity of action by all appraising officers. The number of reports increased during 1950 as the result of increased importations. The following table is indicative of the work of this office.

Activity	1949	1950	Percentage increase, or decrease ()
Appraisers' reports of value or classification received	31, 936	38, 615	20. 9
	2, 819	2, 940	4. 3
	3, 805	3, 357	-11. 8
	628	634	1. 0

LABORATORIES

The ten customs laboratories, maintained for the purpose of testing representative samples of imported merchandise to aid in the correct assessment of duties, tested 83,429 samples, an increase of 14 percent over the total tested in the previous year. The number of samples of ores, metals, and wool increased while those of sugar declined. Samples of ores, sugar, and wool constituted more than 50 percent of the total number analyzed.

The operation of the laboratory at Honolulu, which was discontinued after the attack on Pearl Harbor, was resumed during 1950. Plans for the installation of a new customs laboratory at San Juan, Puerto Rico, were initiated and considerable progress was made toward its completion.

Most of the samples tested in the laboratories were taken from regular imports in 1950; however, there were 369 samples taken from

export shipments and 2,032 samples from customs seizures.

In cooperation with other activities the customs laboratories assisted in determining whether samples of Government stockpile purchases of strategic materials complied with contract specifications. The laboratories provided technical supervision, equipment, and space for the analysis.

LAW ENFORCEMENT ACTIVITIES

The law enforcement activities of the Customs Service consist of the seizure of merchandise which has been fraudulently declared or illegally introduced into this country and of the investigation of violations discovered after the entry of merchandise. Fewer seizures were made in 1950 than in 1949, but the value of such seizures was almost as large as during the previous year. Practically the same number of automobiles and trucks were seized as in 1949, but the value of these seizures was considerably less than in the previous year. Five more boats were seized than in 1949 and the total value of such seizures was over a million dollars greater than in the previous year. Liquor seizures increased slightly in number, gallonage, and value, but the number of prohibited articles seized in 1950 was considerably less than the previous year. Seizures of ordinary merchandise were also less

numerous and of considerably less value than in 1949.

There were 210 fewer seizures of narcotics and the reported value of such seizures was less than the year before. As compared with 1,735 ounces of raw opium seized in 1949, only 645 ounces were seized during 1950. The quantity of morphine, heroin, and cocaine seized also declined sharply from the preceding year. The decrease in the quantity of seizures of cocaine was the result of the breaking up of an extensive ring operating between Peru and the United States as a consequence of the joint investigation by customs and narcotics Seizures of smoking opium, however, were made in greater quantity in 1950 than in the previous year, 1,038 ounces being seized during 1950 and 855 ounces in 1949. Marihuana seizures continued extremely heavy, amounting to 33,291 ounces as compared with 38,086 ounces in 1949, most of these being made on the Mexican There were also numerous seizures, in small quantities, of marihuana in the form prepared in India, Turkey, Tunisia, and South A notable feature of the marihuana seizures along the Mexican border during the past two years has been the large quantity contained in single seizures, in some cases as much as 100 pounds in a

Seizures for violations of customs laws are shown in tables 93

and 94.

INVESTIGATIVE ACTIVITIES

The investigative arm of the Customs Service, the Customs Agency Service, investigates all important criminal cases covering the violations of the customs laws and also conducts many other examinations where expert investigative ability is needed. Probably the most important case of the use of false invoices and entries involved the importation of Swiss watches which resulted in a claim against the importer for more than \$6.8 million. Several attempts to smuggle diamonds and jewelry were discovered during the year and in two cases the amounts involved exceeded \$100 thousand each. One unusual smuggling attempt at San Ysidro involved 40 live parrots, 20 of which were in a wire mesh cage underneath the seat of a truck and 20 more in cardboard cartons on top of the motor. Since the importation of live parrots is prohibited, the truck was seized, the driver jailed, and the parrots destroyed.

In the enforcement of the export control regulations a number of planes were seized which were apparently destined for the east European area. A number of shipments of gold, one of which was concealed in an electric refrigerator, and a private yacht, which was being used to transport merchandise for pay, were also seized. Investigations of the violation of the Neutrality Act involved a number of

seizures of firearms and ammunition.

A steamship which was wrecked at an isolated spot on the coast of the Seattle district was looted by local residents, crews of passing fishing vessels, and Indians from a nearby reservation. Most of the fishing vessels involved were seized and 60 cases are pending against other looters. The cargo of lumber will probably never be salvaged completely since some of it broke loose and drifted out to sea. About one-half million feet, however, were landed and seized at various ports in the Washington district.

In the course of their regular duties customs personnel often discover violations of other than customs laws. During 1950, 11,670 seizures were made for other governmental agencies, 11,584 of which were for the Department of Agriculture. In addition, 50 persons were apprehended, of whom 33 were for the Immigration and Natural-

ization Service.

Table 95 summarizes the investigative activities during the last two years.

FOREIGN TRADE ZONES

During the thirteenth year of its operation, Foreign Trade Zone No. 1 on Staten Island handled a somewhat smaller volume of business than during the preceding year, although there was an increase in duties collected on goods entering customs territory from the zone. The decline in volume was due to the fact that the storage space in the zone was fully occupied since a large part of the merchandise remained in the zone for longer periods than formerly. Up to the end of the year the space formerly within zone territory had not yet been restored by the Army for zone use. In addition the number of manipulations (such as fumigating, sorting, sampling, marking, labeling, repacking, etc.) performed in zone territory increased considerably over previous years.

Operations in Foreign Trade Zone No. 2 at New Orleans continued at a high level but involved a large volume of goods exported after manipulation so that the dutiable merchandise entering customs territory was comparatively small.

For the second full year of its operations Foreign Trade Zone No. 3 at San Francisco handled approximately the same tonnage as in 1949 but the value of the goods entering the zone was more than double

that received during the first year of its operation.

Foreign Trade Zone No. 4 at Los Angeles was opened for business on September 9, 1949, and Foreign Trade Zone No. 5 at Seattle on September 1 of the same year. Both zones received a wide variety of products and appear to have made a successful start.

Foreign Trade Zone No. 6 has been authorized at San Antonio, Tex., and will be the first inland foreign trade zone, the first zone operated at an airport, and the first zone operated by a private concern.

The following is a brief summary of the foreign trade zone operations:

	Trade zone	Number of	Received in zone		Duties col-
* .	Trade zone	entries	Long tons	Value	lected
New York New Orlea San Franci Los Angele Seattle	isco	4, 571	(1) 29, 223 10, 021 5, 957 2, 957	(1) \$13, 627, 729 7, 231, 346 2, 238, 350 1, 623, 118	\$3, 679, 312 174, 024 1, 069, 710 (1) 233, 519

¹ Not reported.

LEGAL PROBLEMS AND PROCEEDINGS

Considerable attention was given during the year to problems in connection with the establishment of new foreign trade zones. Questions arising in connection with the conversion of foreign currency for which two or more rates of exchange have been certified by the Federal Reserve Bank of New York continued to require considerable time. General regulations, prepared for the conversion of all currencies for which multiple rates are certified, have expedited the conversion of such rates and obviated the necessity for the issuance of special instructions for each such currency.

Although the bulk of the large number of overtime cases pending in the Court of Claims has been disposed of on the basis of rulings in the cases of Myers v. United States (320 U. S. 561; 321 U. S. 750) and O'Rourke v. United States (109 Ct. Cls. 33), a considerable amount of work continued throughout the year on special problems in connection with the cases not previously settled and on other questions arising in

connection with the overtime laws.

Miscellaneous

Changes in customs ports and stations.—The customs port at Guayanilla, Puerto Rico, and stations at Port Orchard and Bremerton, Wash., Manistee, Mich., Boquillas and Dolores, Tex., were abolished and a port established at Neah Bay, Washington. The name of the port of Senoyta, Ariz., was changed to Lukeville, Ariz.

Cost of administration.—During the fiscal year 1950 the Customs Service incurred expenses of \$35,689,921 for collecting the revenue and for printing, excluding expenses of enforcing the renewed export control regulations. This was \$700,236 more than during the previous year. The increase in expenditures was due to the raise in pay authorized by the Eighty-First Congress and to the automatic within-grade raises provided by the Meade-Ramspeck law. The expenses, moreover, do not include salaries paid to customs personnel for overtime and other services authorized by law for which reimbursement was made to the appropriation by parties interested. The increased collections more than offset the increase in expenditures, so that the cost of collecting \$100 of revenue declined from \$6.79 in 1949 to \$6.37 in 1950. A summary of the collections and expenditures for 1950 will be found in table 82.

BUREAU OF ENGRAVING AND PRINTING

The Bureau of Engraving and Printing designs, engraves, and prints currency, bonds, certificates, stamps and various other official documents and forms. Deliveries of finished work during the fiscal year 1950 totaled 729,297,594 sheets, a decrease of 16,901,967 sheets, or approximately 2.3 percent, as compared with the quantity delivered during the previous year.

A comparative statement of deliveries of finished work in the fiscal years 1949 and 1950 follows:

Class	She	Sheets		
Olass 	1949	1950	1950	
Currency:

Under the management program, comprehensive modernization of the Bureau, begun during the previous fiscal year, was continued

during 1950.

The installation of auxiliary polishers and semi-automatic feed-boards on 251 of the old style intaglio plate printing presses, used for printing currency and other engraved work, was completed during the year. As a result of this conversion the output of these presses ultimately will be increased approximately 30 percent, thereby effecting estimated annual savings of over \$1 million.

The five modern offset presses installed during the year print revenue stamps in 800-subject sheets, thereby doubling the output of the old-type presses; and the three new typographic presses for overprinting revenue stamps and checks have a productive capacity about 25 percent greater than the obsolete presses which they replaced.

An improved method of packing sheets of postage stamps for delivery was adopted during the year. In lieu of the previous practice of wrapping the packages in kraft paper, the stamps are shipped in cardboard cartons which are sealed by a stapling machine. The new method facilitates the packing operation and affords greater protection

to the stamps while in transit.

In accordance with the general policies and objectives of the joint program for improving accounting procedures in the Federal Government, representatives of the General Accounting Office, the Bureau of the Budget, and the Bureau of Accounts of the Treasury Department have worked in close collaboration during the year with the accounting staff of this Bureau in a survey of its fiscal activities. As stated in the report "Administrative Management," conclusions of the survey were that the industrial nature of this Bureau's operations and its relationships with other agencies make it especially adaptable to business-type procedures and to a working-capital fund method of financing. An illustrative budget was prepared on this basis and was submitted to the Appropriations Committees of Congress, together with a request for legislation authorizing this Bureau to operate on a wholly reimbursable basis beginning with the fiscal year 1952. Work is progressing satisfactorily to effect the necessary

907795---51----7

changes required in the existing financing and accounting procedures in accordance with the plan, of action recommended by the joint

committee assigned to this project.

The Classification Act of 1949, Public Law 429, 81st Congress, approved October 28, 1949, exempted those Bureau employees formerly in the clerical-mechanical service and specified that the compensation of such employees shall be fixed and adjusted from time to time as nearly as is consistent with the public interest in accordance with prevailing rates. In conformity with this provision of the law, wage surveys were conducted by the Bureau and rates of pay comparable to those paid by the Government Printing Office for similar work were recommended to the Treasury Wage Board. In April 1950 the rates of pay for these positions were approved by the Administrative Assistant to the Secretary. The new rates, which were made effective on April 30, 1950, affected approximately 4,000 employees and resulted in a salary increase for a majority of these employees. The total annual cost of these wage increases will be approximately \$1,115,000.

In order to develop a more effective personnel program, the functions of the industrial relations office and the activities of the personnel division have been consolidated and are now administered

under a newly created industrial relations division.

The total personnel at the beginning of the fiscal year comprised 6,070 employees. There were 1,353 appointments and 1,176 separations, leaving a total of 6,247 employees on the rolls at the end of the year.

Expenditures amounted to \$25,081,019.73 which is a decrease of \$1,767,392.50 or approximately 7 percent less than the total expended during the previous fiscal year. The following tabulation shows the appropriations, reimbursements, and expenditures for the fiscal years 1949 and 1950.

	1949	1950	Increase, or decrease (-)
Appropriation: Salaries and expenses. Reimbursements to appropriation from other	\$15, 660, 000. 00	\$15, 825, 000. 00	\$165, 000. 00
bureaus for work completed: 1 Salaries and expenses	11, 223, 848. 44	9, 299, 243, 81	-1, 924, 604. 63

Salaries and expenses	26, 848, 412. 23	25, 081, 019. 73	-1, 767, 392. 50
Unexpended balance	35, 436. 21	43, 224. 08	7, 787. 87

¹ Additional amounts of \$1,555.65 for 1949 and \$7,316.25 for 1950 were received from employees for recoveries of Government property lost or damaged, refunds of terminal leave compensation, recoveries for jury service, and collections to correct discrepancies in the paper accounts; and from firms for empty drums returned by Bureau, recoveries of excess cost over contract price, repayments of lapsed appropriations, settlement of claim for damage to property, and proceeds from sale of offset printing presses.

FISCAL SERVICE—BUREAU OF ACCOUNTS

Receipts and expenditures.—The Government's central accounts for revenues, appropriations, and expenditures of departments and establishments are maintained, under existing provisions of law, in the Bureau of Accounts. Under the act of July 31, 1894 (5 U. S. C. 264), this Bureau prepares annually for the Secretary a report to the

Congress, classifying receipts wherever practicable by districts, States, and ports of collection, and the expenditures under each separate head of appropriation. Receipts and expenditures of the Government for the fiscal year 1950 are shown in the summary of Federal fiscal operations appearing on page 3 of this report, while a more detailed

statement is included as table 1.

Accounting improvements.—In the report "Administrative Management," beginning on page 61, reference was made to the program to improve the Government's accounting under the joint leadership of the Comptroller General of the United States, the Secretary of the Treasury, and the Director of the Bureau of the Budget. The accounting staff of the Bureau of Accounts from the standpoint of the Treasury Department has carried on the work under this program at the joint working level with the General Accounting Office and the Bureau of the Budget. This accounting staff also during the year rendered technical advice and assistance to the various bureaus and offices of the Treasury Department, principally the United States Coast Guard, the Bureau of Engraving and Printing, and the Bureau of Customs. Substantial progress was made under the joint accounting program as set forth on page 135 of the annual report of 1949. Under the new Budget and Accounting Procedures Act of 1950 the accounting staff of the Bureau of Accounts will be actively engaged in the work of organizing the accounting and reporting activities of the Treasury Department for the purpose of implementing that act (see exhibit 36).

Management improvement.—Under the improvement program in the Bureau of Accounts further changes in procedures were adopted during the year and increased mechanization of operations was effected. Certain of these developments are described in the report "Administrative Management," pages 61 to 65. These included the extension of the withholding tax procedure to employment taxes; the preparation of check accounting material in a form to facilitate earlier reconciliation and settlement of Treasury checking accounts; and the efficient preparation and delivery of the 15 million dividend checks to veterans of World War II who held national service life insurance

policies.

A wide variety of other procedural improvements were instituted during the year. These are described in the following paragraphs.

A new form of Government check has been designed which will show the amount at one place on the check instead of two places. This change will not only facilitate payments of the checks but will effect savings in the preparation of addressograph plates and in modifications

of these plates.

Procedure has been placed in operation to effect benefit payments in local currencies of foreign countries for the Veterans' Administration, Social Security Administration, Civil Service Commission, and Railroad Retirement Board. Payments in Poland, Czechoslovakia, and Hungary are made through the United States Disbursing Officers of the Department of State.

Payments in certain foreign countries were further facilitated by a new procedure effective May 1, 1950, permitting the drawing of checks on the Treasurer of the United States by the United States Disbursing Officers of the Department of State in lieu of making drafts on the

Secretary of State. This plan will be extended to other countries as

rapidly as possible.

To facilitate the issuance of Philippine peso checks and to provide a more economical operation, account No. 3 of the Chief Disbursing Officer was established with the Manila Branch of the National City Bank of New York. This account, operated from Washington, D. C., is to pay certain beneficiaries of the Veterans' Administration and for other purposes.

To establish a better control and to simplify the accounting and disposition of Philippine pesos reclaimed by the Treasurer of the United States on peso checks negotiated on forged endorsements, there was established special deposit account No. 4 to which amounts reclaimed in Philippine pesos are credited and from which payments are made. The account is administered by the Division of Invest-

ments, Bureau of Accounts.

Daily Statement of the United States Treasury.—Commencing November 1, 1949, interest on the public debt is reported in the daily Treasury statement as an expenditure when such interest becomes due and payable, as distinguished from the previous practice of showing the expenditure on the basis of interest paid by the Treasurer of the United States.

During the year procedures were installed on an experimental basis whereby expenditures of the Departments of the Air Force and the Army were reported to the Treasury through the use of teletype facilities. Commencing in July 1950, the expenditures of these Departments are included in the daily Treasury statement on the basis of teletype reports. This moves in the direction of the change commencing July 1, 1948, when the expenditures of the departments and establishments of the Government serviced by the Division of Disbursement were first reported in the daily Treasury statement as of the day on which checks are issued in payment of Government obligations rather than the day the reports of checks paid were received by mail in Washington, D. C.

Disbursement activities.—The Division of Disbursement maintains 27 regional disbursing offices in the continental United States and Territories and other disbursing facilities in foreign countries, serving all executive departments and agencies except the Post Office Department, United States Marshals, the Panama Canal, the Department of Defense, and certain Government corporations. The number of payments, collections, and savings bonds issued by the Division of Dis-

bursement during the fiscal years 1949 and 1950 are as follows:

	Number	
Classification	Fiscal year 1949	Fiscal year 1950
Payments (checks and cash): Social security. Veterans' benefits. Special dividend program Tax refunds. Other Collection items. Savings bonds issued to Federal employees in payroll savings plan.	28, 822, 250 80, 137, 417 38, 407, 651 28, 368, 258 5, 787, 078 2, 402, 927	33, 878, 237 80, 264, 384 14, 731, 388 29, 412, 534 31, 450, 038 5, 875, 718 2, 485, 644
Total	183, 925, 581	198, 097, 940

The improvements in disbursing practices and procedures during

the year are summarized on pages 64 and 65 of this report.

National service life insurance special dividend program.—Commencing in January 1950 the Division of Disbursement issued for the Veterans' Administration 14,731,388 dividend checks totaling \$2.6 billion to veterans of World War II who held national service life insurance policies. To accomplish this task within the shortest period of time possible, a branch of the Washington Regional Office was established and staffed with the best qualified supervisory personnel available. The operation was geared to produce 200,000 checks a day. In view of the magnitude of the program, many innovations and precautionary measures were introduced to provide every safeguard and to facilitate efficient preparation and prompt delivery of the check to the veteran. The transfer posting process of preparing checks was used. This method, having proved expedient on previous tax refund programs, reduced the overall cost of the operation to a unit figure of 3½ cents, which was considerably less than the original estimate. As a result, the Secretary of the Treasury presented cash awards to those supervisory employees of the Division of Disbursement who were instrumental in effecting the economies. The savings realized resulted from the comprehensive training of the employees assigned to responsible functions and from the adoption of the production line principle which prevented duplication of effort and minimized the possibility of error. See also the report "Administrative Management."

Withheld foreign checks.—Regulations of the Treasury Department relating to the delivery of Government checks to payees residing in foreign countries were amended to allow delivery in all places in the world except the Russian Zone of Occupation of Germany; the Russian Sector of Occupation of Berlin, Germany; and in Albania and Bulgaria. A copy of the amendment appears as exhibit 37.

Government losses in shipment.—The value of shipments reported by Government departments and agencies during the year under coverage of the Government Losses in Shipment Act, as amended (5 U. S. C. 134–134h), amounted to \$418,044,811,084, as compared with \$405,111,163,200 for the fiscal year 1949. Claims totaling \$105,917.65, which includes \$102,890.20 on account of United States savings bonds and armed forces leave bonds redemption cases, were paid out of the revolving fund during the year, and recoveries during the year amounting to \$100,094.59 were deposited to the credit of the fund, leaving a net expenditure of \$5,823.06 for losses. The cumulative amount of estimated insurance premium savings to the Government from the inception of the act in 1937, based on rates in effect at that time, totaled \$31,537,726.30. Information concerning the operation of this self-insurance plan by the Government will be found in tables 98 to 102.

Bonding of Government employees.—During the year the Treasury Department was requested to report on legislation introduced in the Congress to provide for the purchase of blanket position schedule bonds, from funds made available for administrative expenses, to cover officers and employees of the Government. The Treasury was in favor of the proposed legislation to relieve employees of the personal

expense of providing surety bonds and to reduce administrative ex-

penses of handling the individual bonds.

Authorized surety companies.—A list of the surety companies authorized to write bonds in favor of the United States is published by the Treasury semiannually. During the year certificates of authority were issued to 13 additional companies qualifying them as sole sureties on bonds in favor of the United States. A total of 47,124 bonds and consent agreements were approved by the Treasury as to corporate surety during the year.

Depositaries of public moneys.—The Division of Deposits handles the administrative work relating to the designation of depositaries of public moneys. Cash balances held by the various classes of

depositaries are shown in the table on page 99.

The Division completed arrangements with approximately 1,000 additional commercial banks during the year to furnish drafts to officers of the Farmers' Home Administration, the Public Housing Administration, and other agencies for transmitting their collections of Government funds to Federal Reserve Banks for account of the Treasury. The extension of this program facilitates the transmittal and deposit of Government funds at certain points where volume is small.

Effective January 1, 1950, the Bureau of Internal Revenue, in cooperation with the Fiscal Service, adopted a procedure whereby tax returns covering withheld taxes and social security taxes are combined. Under this new procedure employers deposit withheld taxes with Federal Reserve Banks either directly or through commercial banks. The commercial banks, through which deposits of withheld taxes are made, render such services as a convenience to their customers without cost to the Government. Prior to the new procedure commercial banks were compensated for accepting deposits and issuing receipts for withheld income taxes.

Investments of trust funds.—Under various provisions of law, the Secretary of the Treasury is responsible for investing certain trust funds. A summary of the various investment accounts for which he

is responsible is shown as table 41.

The revision effective January 1, 1950, in the procedure followed by the Treasury Department in collecting and accounting for deposits of social security taxes provides a basis for earlier collection of employment taxes and for appropriating on a current basis from the general fund of the Treasury to the Federal old-age and survivors insurance trust fund amounts equal to funds received. In view of this change, the practice of making investments for the fund was changed from a quarterly to a monthly basis. Under this change, the earlier use of tax collections accrues to the benefit of the trust fund.

Interest payments to trust funds.—The Treasury Department and the Bureau of the Budget have been giving consideration to interest payments by the Government on securities issued to trust funds and not available to the public. In some cases Congress has provided specific guides as to the rate of interest to be paid on public debt securities issued to trust funds, but in other cases specific guides have not been provided. The Secretary of the Treasury has taken the position that, in the absence of specific guides or directives by the Congress to the contrary, the rate of interest paid on such securities

should be the average interest rate paid on all interest-bearing public issues of the public debt outstanding at any one time (see exhibit 35).

Transfer of Canal Zone and Alaska Railroad retirement funds to civil service retirement and disability fund.—Pursuant to Public Law 180, 81st Congress, approved July 21, 1949, which provided for consolidation of the accounts for the Canal Zone and Alaska Railroad retirement funds with the civil service retirement and disability fund, the Treasury transferred assets from the abolished accounts amounting to \$294,123.83 in cash and \$17,539,500 in special issues

of securities to the civil service retirement and disability fund.

Collections under section 16 of Federal Reserve Act, as amended (12) U. S. C. 414).—During the fiscal year 1950 there was deposited in the Treasury as miscellaneous receipts by the Federal Reserve Banks the sum of \$191,875,030.82, representing interest levied by the Board of Governors of the Federal Reserve System on basis of the amount of Federal Reserve notes in circulation. Such deposits are made quarterly and the above amount covers the last three quarters of the calendar year 1949 and the first quarter of the calendar year 1950. Comparative figures of amounts deposited by each Federal. Reserve Bank for the fiscal years 1948 through 1950 appear in table 9.

Loans and capital subscriptions.—In supplying funds required by Government corporations and agencies which are authorized to borrow money for operations, the Treasury made cash advances aggregating \$7,203,723,545.91 in 1950. The Treasury received repayments of \$5,631,828,343.55, resulting in net advances of \$1,571,895,202.36. statement showing obligations of Government corporations and other agencies held by the Treasury as of June 30, 1950, appears as table 66. Cancellations by the Treasury of obligations of Government cor-

porations and agencies amounted to \$73,202,146.01 in 1950, of which \$73,000,000 applied to capital stock.

The Treasury's holdings of capital stock in Government corporations decreased by \$236,270,800 during the year as a result of cash payments in the amount of \$163,270,800 and the cancellations of \$73,000,000. Dividends, interest, and like payments received by the Treasury from Government corporations and other enterprises in which the Government has a financial interest aggregated \$144,922,557.29. Certain transactions of particular interest are described below, and a tabulation showing dividends, interest, and like payments received from Government corporations and other enterprises in which the Government has a financial interest appears as table 76.

Loans to Administrator for Economic Cooperation.—Pursuant to provisions in the act of April 19, 1949 (63 Stat. 50), and Public Law 327, 81st Congress, approved October 6, 1949, which further amended the Economic Cooperation Act of 1948 (22 U.S. C. 1501–1522), the Treasury accepted additional notes of the Administrator for Economic Cooperation in the amount of \$122,300,000 for the purpose of guaranteeing investments in private enterprises undertaken in foreign countries and \$150,000,000 for the purpose of loans to participating countries. As of June 30, 1950, the Treasury had accepted \$150,-000,000 face amount of guaranty notes and \$1,122,300,000 face amount of loan notes.

The agreement between the Administrator and the Secretary of the Treasury provides that the notes constitute allocations against which the Export-Import Bank of Washington may draw as funds are required. By June 30, 1950, the Bank had drawn \$444,373.08 against the guaranty notes and \$963,979,000 against the loan notes, leaving undisbursed balances of \$149,555,626.92 and \$158,321,000, respectively. Of the \$444,373.08 drawn against the guaranty notes, \$12,389.33 was repaid to the Treasury, leaving \$431,983.75 unpaid as of June 30, 1950.

The Foreign Economic Assistance Act of 1950 (Public Law 535, 81st Congress, approved June 5, 1950) authorized an additional \$50,000,000 for guaranty purposes. As of the end of the year the Administrator had not presented any notes to the Treasury for

purchase against this authorization.

Loans to District of Columbia for expansion of the water system.—Public Law 533, 81st Congress, approved June 2, 1950, authorized the Commissioners of the District of Columbia to accept, and the Secretary of the Treasury to make, loans not exceeding \$23,000,000 to finance the expansion and improvement of the District of Columbia water system when sufficient sums are not available from the District of Columbia water fund. Any advances must be repaid to the Secretary of the Treasury in the period 1961–80 in such annual amounts as the Congress shall hereafter direct, and interest shall accrue as of the dates the advances are credited to the water fund. No advances under

this authority were made during the fiscal year 1950.

Loans to Housing and Home Finance Administrator.—Pursuant to the Housing Act of 1949, Public Law 171, 81st Congress, approved July 15, 1949, the Treasury agreed to purchase notes of the Administrator of the Housing and Home Finance Agency for the purpose of providing funds for carrying out the provisions of title I of the act for slum clearance and community development and redevelopment. As of June 30, 1950, the Treasury had purchased one note of the Administrator in the amount of \$500,000. The agreement between the Administrator and the Secretary of the Treasury provides for payment of interest to the Treasury at the average rate on outstanding interest-bearing marketable public debt securities of the United States subject to a provision that the rate during each fiscal year will be adjusted to the average rate which pertains as of the close of the preceding fiscal year.

In accordance with title IV of the Housing Act of 1950, Public Law 475, 81st Congress, approved April 20, 1950, the Administrator may assist educational institutions in providing housing for their students and faculties by making loans of funds to such institutions for the construction of such housing. To obtain funds for loans under this title, the Administrator may issue and have outstanding at any one time notes and obligations for purchase by the Secretary of the Treasury in an amount not to exceed \$300,000,000. As of June 30, 1950, the Administrator had not issued any notes or obligations under

this title.

Production credit corporations.—Production credit corporations, through the Department of Agriculture, returned to the Treasury \$4,000,000 during the fiscal year 1950, which together with \$30,000,000 repaid in the fiscal year 1949 reduced the capital stock owned by the Government as of June 30, 1950, to \$42,235,000.

Commodity Credit Corporation.—The appraised value of the liabilities

and capital of the Commodity Credit Corporation as of June 30, 1949, as determined by the Secretary of the Treasury under the act of March 8, 1938, as amended (15 U. S. C. 713a-1), exceeded the value of the assets by \$66,698,457.34. An amendment to the general appropriations bill, 1951 (H. R. 7786), authorized the Secretary of the Treasury to discharge this indebtedness of the Corporation by canceling notes in the amount of \$66,698,457.00. A statement showing the results of annual appraisals appears in table 71.

The acts of December 17, 1947 (61 Stat. 934), and December 23, 1947 (61 Stat. 941), required the Secretary of the Treasury to cancel notes of the Corporation in the amount of the losses incurred by the Corporation through the sale of commodities in connection with the foreign-aid program. No notes were canceled during 1950. Notes canceled under this provision previous to 1950 amounted to

\$56,239,432.11.

Interest on capital stock, Commodity Credit Corporation.—Pursuant to the Commodity Credit Corporation Charter Act of June 29, 1948 (62 Stat. 1072), the Corporation paid to the Treasury \$2,000,000 as interest on its capital stock. The interest rate of 2 percent was determined by the Secretary of the Treasury on the basis of the average interest rate on outstanding interest-bearing marketable public debt securities of the United States on June 30, 1949.

Dividends received from the Reconstruction Finance Corporation.— Under the act of May 25, 1948 (62 Stat. 261), which requires an annual payment, between July 1 and December 31, of the amount, if any, by which the accumulated net income of the Reconstruction Finance Corporation exceeds \$250,000,000, the Corporation paid into the Treasury on December 31, 1949, as miscellaneous receipts, a dividend

of \$1,345,185.29 on its capital stock.

Cancellations of notes, Reconstruction Finance Corporation.—In accordance with the act of June 30, 1948 (62 Stat. 1187), the Secretary of the Treasury in 1950 canceled notes of the Reconstruction Finance Corporation in the amount of \$202,146.01, which equaled the costs incurred by the Corporation subsequent to June 30, 1947, for handling, storing, processing, and transporting critical materials to stock piles.

As also required by the act, the Corporation deposited in the

As also required by the act, the Corporation deposited in the Treasury as miscellaneous receipts the recoveries less related expenses, made subsequent to June 30, 1947, of national defense, war, and reconversion costs, which in 1950 amounted to \$25,022,694.56.

A statement showing all cancellations and recoveries by the Treasury in connection with Reconstruction Finance Corporation notes is

shown in table 72.

Dividends on and repayments of capital stock of Federal home loan banks.—Dividends amounting to \$1,260,268.75 on capital stock holdings of the Treasury in Federal home loan banks were deposited in the Treasury as miscellaneous receipts. The banks also made repayments totaling \$27,270,800 on capital stock, of which \$3,723,300 was required under section 6 (g) of the Federal Home Loan Bank Act, as amended (12 U. S. C. 1426 (g)), and \$23,547,500 was voluntary. A statement showing dividends and stock repayments by banks appears as table 74.

Dividends on capital stock of the Federal Farm Mortgage Corporation.—The Federal Farm Mortgage Corporation paid to the Treasury during the fiscal year 1950 as dividends \$17,000,000, in accordance with the act of June 29, 1949 (63 Stat. 347). This sum was deposited

as miscellaneous receipts.

Federal intermediate credit banks.—The Agricultural Credits Act of 1923, as amended (12 U. S. C. 1072), requires each credit bank, at the end of each fiscal year, after all necessary expenses and costs of operation for the year have been provided or paid for, to apply its remaining net earnings to (1) making up any losses in excess of reserves, (2) eliminating capital impairment, (3) creating reserves against unforeseen losses, and (4) paying 25 percent of the amount then remaining to the United States as a franchise tax. During the fiscal year 1950, \$260,665.80 was deposited into the Treasury.

Panama Railroad Company.—During the year the Panama Railroad Company paid to the Treasury \$1,000,000 as dividends on capital

stock owned by the Government.

Smaller War Plants Corporation.—During the fiscal year the Reconstruction Finance Corporation, as liquidation agency, paid to the Treasury \$10,000,000 for retirement of capital stock of the Smaller War Plants Corporation, reducing the June 30, 1950, holding of the stock by the Treasury to \$44,400,000.

Home Owners' Loan Corporation (in liquidation).—The Treasury received during the year final payment on \$125,000,000 face amount of Home Owners' Loan Corporation bonds and interest. Repayments of capital stock reduced the Treasury holdings of \$200,000,000 to

\$74,000,000 on June 30, 1950.

Federal Savings and Loan Insurance Corporation.—The Treasury received from the Federal Savings and Loan Insurance Corporation \$28,981,112.27 representing interest on its capital stock at 2 percent from June 27, 1934, to June 30, 1950, less dividends previously paid by the Corporation to the Home Owners' Loan Corporation. The payment was made pursuant to Public Law 576, 81st Congress, approved June 27, 1950, which also contains provisions for future payments to the Treasury of interest on its capital stock at a rate to be determined by the Secretary of the Treasury, and for the retirement of capital stock annually in amounts equal to 50 percent of net income for the fiscal year.

Federal savings and loan associations.—During the fiscal year 1950 the Treasury received \$136,600.00 which completes the repayments on \$49,300,000 of shares of Federal savings and loan associations acquired under the act of June 13, 1933, as amended (12 U. S. C. 1464 g-j). Dividends received during the year amounted to \$1,670.50, which brings the total amount of dividends through June 30, 1950, to

\$10,563,393.85.

Federal Crop Insurance Corporation.—Pursuant to Public Law 268, 81st Congress, approved August 25, 1949, which amended the Federal Crop Insurance Act (7 U. S. C. 1501–1519), the Treasury canceled, without any payment being made by the Corporation, outstanding receipts for payments of \$73,000,000 of capital stock of the Federal Crop Insurance Corporation, thus reducing the stock of the Corporation held by the Treasury to \$27,000,000.

Obligations of foreign governments.—The indebtedness to the United States from foreign governments arising from World War I amounted to \$16,134,787,078.95 as of November 15, 1950, including \$11,-434,794,809.51 on account of principal and \$4,699,992,269.44 on

account of interest. The principal figure does not include the World War I indebtedness of Germany amounting to \$1,225,023,750 (3,037,500,000 reichsmarks). Tables 110 and 111 show the status of the indebtedness of foreign governments to the United States arising

from World War I.

The indebtedness of foreign governments arising from World War II, representing amounts receivable on lend-lease settlement agreements, collections on which are being handled by the Treasury, surplus-property sales agreements, and other lend-lease accounts, totaled \$2,394,002,510.82, details concerning which are shown in table 112. This amount includes \$291,215,172.64 due the United States for the value of silver transferred to foreign governments under the lend-lease program which is to be repaid in kind. Final settlement agreements have not been reached with all foreign governments.

Payments by Finland on World War I indebtedness.—During the fiscal year 1950 the Treasury received \$424,041.98 in payment of Finland's indebtedness under the funding agreement of May 1, 1923, and the moratorium agreements of May 1, 1941, and October 14, 1943. Public Law 265, 81st Congress, approved August 24, 1949, provides that the amounts paid by Finland after August 24, 1949, shall be placed in a special deposit account which shall be available to the Department of State to finance educational and technical instruction and training in the United States for citizens of Finland, American books and technical equipment for institutions of higher education in Finland, and participation of United States citizens in academic and scientific enterprises in Finland. In accordance with the act, the amount received was made available to the Department of State.

Lend-lease and surplus-property fiscal operations.—The billing and collecting from foreign governments for reimbursable supplies and services furnished under lend-lease and reciprocal aid agreements and surplus-property sales agreements negotiated by the Department of State were continued. Collections made by the Treasury on these accounts during the fiscal year 1950 amounted to \$34,484,200.82,

bringing the total collections to \$545,340,889.32.

Articles and services furnished under agreements as authorized by the Lend-Lease Act were reported in the amount of \$13,904,353.38, bringing the total defense aid provided to \$50,242,673,031.59 between March 11, 1941, and June 30, 1950. The increase in the total defense aid provided was the net result of the receipt of heretofore unreported charges affecting both reimbursable and nonreimbursable accounts. Reverse lend-lease, consisting of articles and services furnished by foreign governments to the United States up to September 2, 1945, amounted to \$7,819,322,790.90. Between March 11, 1941, and June 30, 1950, funds received from foreign governments amounted to \$1,766,243,220.78. Of this amount \$1,281,178,939.71 has been covered into the United States Treasury as miscellaneous receipts, \$221,517,703.91 net has been allocated to the procuring agencies under the cash reimbursement program, \$171,035,317.10 has been returned to foreign governments, \$88,299,000.00 was reappropriated to the President by the act of June 30, 1944 (58 Stat. 627), \$1,578,-332.85 was reimbursed to other agencies, and the remainder of \$2,633,927.21 is being held in the Treasury pending settlement of accounts.

Foreign currencies.—During the fiscal year the Treasury continued the operation of central facilities for receipt and utilization by the United States of foreign currencies received under surplus property and lend-lease agreements, and excess foreign currencies acquired by sales of surplus property and lend-lease goods, Economic Cooperation Administration counterpart and guaranty funds, and other operations in foreign countries. These currencies are sold to various Government agencies as required. In accordance with provisions for educational exchange programs conducted between the United States and certain countries as authorized in section 32 (b) (2) of the Surplus Property Act of 1944, as amended (50 U. S. C. 1641 (2)), the currencies in the following statement were delivered in the fiscal year 1950 to the Department of State without receipt of the equivalent amount in United States dollars:

Country	Foreign currency	Equivalent dollar value
Italy Netherlands New Zealand	7,037,062.50 francs 1,615,500 rupees. 68,000,000,000 gold yuan 1 5,033,820 pounds. 279,905,000 francs 213,238 pounds. 5,004,200,000 drachmas 142,794 rupees. 550,000 rials. 354,400,000 lire. 1,513,212.50 guilders 41,039 pounds.	150, 000. 00 400, 000. 00 29, 000. 00 14, 500. 00 810, 000. 00 350, 000. 00 33, 750. 00 13, 750. 00 557, 232. 70 500, 000. 00
Total		4, 376, 762, 70

¹ Currency delivered during fiscal year 1949.

The amounts of foreign currencies held by the Treasury on June 30, 1949, transactions during the fiscal year, and balances on June 30, 1950, in foreign currencies and approximate United States dollar values are shown in table 109.

Liquidation of Institute of Inter-American Transportation.—On August 21, 1946, a certificate of dissolution of this Corporation was filed with the Secretary of the State of Delaware. Liquidation was completed under the direction of the Department of State as of August 21, 1949. Since that date various small collections have been

deposited in the Treasury as miscellaneous receipts.

Liquidation of other war agencies.—Public Law 446, 81st Congress, approved February 9, 1950, relieved certifying officers of terminated war agencies in liquidation by the Treasury Department of liability for bona fide payments which had been suspended or disallowed by the General Accounting Office. These suspensions and disallowances have been removed from the accounts of the certifying officers. As of June 30, 1950, the liquidation of the residual fiscal affairs of certain war agencies was completed, except the final disposition of the remaining fiscal documents and the processing of a few miscellaneous claims that are received from time to time. The terminated war agencies include the Division of Central Administrative Services of the Office for Emergency Management, Office of Civilian Defense, War Refugee

Board, Office of Censorship, Office of War Information, Committee

on Fair Employment Practices, and Price Decontrol Board.

Liquidation of railroad obligations.—The Treasury received \$528,950.75 during the year on account of securities acquired by the United States in connection with loans which were made to railroads under sections 207 and 210 of the Transportation Act of 1920 (41 Stat. 462 and 468). Of this amount \$524,550.75 was collected as interest and dividends on securities of the Seaboard Air Line Railway Company, which are administered by the Reconstruction Finance Corporation pursuant to Executive order, and \$4,400.00 represents earnings on railroad securities owned by the Treasury, other than those held by the Reconstruction Finance Corporation. A statement concerning the liquidation of railroad obligations appears as table 75.

Bonds of the Republic of the Philippines.—An additional \$1,700,000 was paid by the Republic of the Philippines to the Government of the United States for deposit to the special trust account which was established in the Treasury for the purpose of paying principal and interest on pre-1934 Philippine Government bonds. The money was invested in accordance with the act of August 7, 1939 (53 Stat. 1229). The amounts of cash and investments in the special trust account as

of June 30, 1950, are shown in table 107.

Deposits of the Republic of the Philippines.—Under authority of the act of June 11, 1934, as amended by the act of August 7, 1946 (22 U. S. C. 1333), and agreements with the Republic of the Philippines, the Treasury maintains two interest-bearing time deposit accounts for public moneys of the Republic. The authority to maintain the accounts will expire July 1, 1951. As of June 30, 1950, the accounts consisted of deposits of \$55,000,000 at 2 percent interest and \$70,000,

000 at 1 percent interest.

Settlement of prewar Philippine depositary account.—In connection with the reconstruction of the account of the Treasurer of the United States with the Treasury of the Philippine Islands at the time of the Japanese invasion, a balance of \$525,705.09 was computed from records available to the Treasury Department. Additional information, based on records of the Philippine Treasury as audited by the General Auditing Office of the Philippine Government, indicated a balance of \$422,674.11. After taking into consideration certain transactions which were known to the United States Treasury, a balance of \$433,060.57 was determined to be due the Philippine Treasury. The Comptroller General approved a settlement with the Philippine Government on that basis. Settlement was made with the Philippine Government on December 7, 1949, by the transfer of \$433,060.57 to the demand deposit account of the Central Bank of the Philippines.

A residual balance of \$157,689.70 representing the net excess of unidentified credits over unidentified payments was placed in a special deposit account of the Secretary of the Treasury, where these funds were held until such time as the General Accounting Office had completed the audit and reconciliation through December 31, 1941, of the accounts of those disbursing officers who customarily used the Philippine Treasury as a depositary. Under date of May 8, 1950, the Comptroller General advised the Secretary of the Treasury that all of the checking accounts involved had been reconciled through December 31, 1941, and there appeared to be no objection to clearing

the special deposit account. Accordingly, the balance of \$157,689.70 in the account was deposited in the general fund of the United States Treasury in June 1950. This completed all necessary action on the settlement of the account of the Treasurer of the United States with

the Philippine Treasury.

American-Mexican Claims Commission.—The Treasury received from the Government of the United States of Mexico \$2,500,000 in November 1949 as an installment on the \$40,000,000 which Mexico, in the Convention of November 19, 1941, agreed to pay in full settlement of the claims of American nationals as adjudicated by the American-Mexican Claims Commission. The amount enabled a further distribution of 6.2 percent on the unpaid principal amount of each award, making a total distribution of 65.1 percent. A statement of the Mexican claims fund appears as table 103.

Mixed Claims Commission, United States and Germany.—No further funds were received by the Treasury from the Department of Justice for distribution on the awards of the Mixed Claims Commission in accordance with the Settlement of War Claims Act of 1928, as amended (50 App. U. S. C. 9). A statement showing the payments by classes

and status of the accounts to date is shown as table 104.

International Claims Settlement Act of 1949.—Public Law 455, 81st Congress, approved March 10, 1950, provides for the settlement of certain claims of the Government of the United States, on its own behalf and on behalf of American nationals against foreign governments, arising out of World War II. An International Claims Commission has been established in the Department of State to receive claims, conduct hearings, and adjudicate and render final decisions with respect to such claims. Awards of the Commission will be certified to the Secretary of the Treasury for payment to awardees or their successors or assigns in accordance with the provisions of the act.

FISCAL SERVICE—BUREAU OF THE PUBLIC DEBT

The Bureau of the Public Debt performs the administrative work in connection with the management of the public debt, including the preparation of offering circulars and regulations, the issuance of securities and processing of transactions relating thereto, the final audit and custody of securities retired, the keeping of accounts for registered securities, and the drawing of interest checks. Two principal offices are maintained—one in Washington, D. C., for all functions relating to the issuing, servicing, and retiring of public debt securities except those relating to savings bonds following their issue to the public, and the other in Chicago, Ill., where the functions consist of transactions relating to savings bonds after their issue to the public. In addition to these offices, three field regional offices, located in New York, Chicago, and Cincinnati, are maintained for the purpose of decentralizing the auditing of redeemed savings bonds.

Management improvement.—The Bureau continued its program aimed at the reduction of the cost of all functions wherever such reductions could be effected without sacrificing any of the security controls. The improvements made during the year will produce annual savings of nearly \$500,000. In addition, savings resulting from improvements installed in the period 1947–49 amounted to \$2.5

million in 1950.

The regional offices of the Register of the Treasury in St. Louis and Los Angeles were abolished and their functions transferred to the Chicago and Cincinnati regional offices. This action substantially reduced administrative costs without impairment of operating

efficiency.

The issuance of duplicate savings bonds resulting from claims cases was transferred from the Bureau of the Public Debt in Washington, D. C., to the Federal Reserve Bank of Chicago. There this function was consolidated with other bond issue activities of the Bank. The cost of issuing duplicate bonds was thus reduced and delivery of the bonds to their owners was expedited.

A summary of public debt operations handled by the Bureau appears on pages 14 to 26 of this report, and a series of statistical tables dealing with the public debt will be found in tables 11 to 27

and 35 to 39.

The public debt of the United States falls into two broad categories: (1) public issues, and (2) special issues. The public issues are classified as to marketable obligations, consisting of Treasury bills, certificates of indebtedness, Treasury notes, and Treasury bonds; and nonmarketable obligations, consisting mainly of United States savings

bonds and Treasury savings notes.

During the fiscal year 1950 the gross public debt increased by \$4,586,992,491 and the guaranteed obligations held outside the Treasury declined by \$7,772,374. Total public debt issues, including issues in exchange for other securities, amounted to \$125,610,332,406 during 1950, and retirements amounted to \$121,023,339,916. summary showing the effect of Government operations on the public debt will be found on page 3 of this report.

On June 30, 1950, there were 4,670 employees on the rolls of the Bureau of the Public Debt, as compared with 5,848 on June 30, 1949. The decrease of 1,178 employees was made possible through a reduced

work load and improved operating procedures.

United States savings bonds.—In terms of volume of work, the issue and redemption of United States savings bonds represent by far the largest administrative problem of the Bureau. Since these bonds are in registered form and in the hands of millions of American people, the task of maintaining both alphabetical and numerical records of over 1.3 billion of these bonds, the replacement of lost or stolen bonds, and the handling of erroneous redemptions by financial institutions throughout the country on forged signatures involves a major admin-

istrative task.

Receipts from the sales of savings bonds during the year were \$5,672,735,862 and accrued discount, charged to the interest account and credited to the savings bonds principal account, amounted to \$1,045,108,870, making a total of \$6,717,844,732. Expenditures for redeeming savings bonds, including matured bonds, amounted to \$5,422,086,571. The amount of savings bonds of all series outstanding on June 30, 1950, including accrued discount, was \$57,628,-701,716, an increase of \$1,295,758,161 over the amount outstanding on June 30, 1949. Detailed information regarding savings bonds will be found in tables 28 to 33.

During the fiscal year 1950 approximately 67.8 million stubs representing issued savings bonds of Series E were received for

registration, making a total of 1,314.8 million, including reissues, received through June 30, 1950. These stubs are sorted alphabetically by name of owner and microfilmed, and then are sorted in numerical sequence of their bond serial numbers and microfilmed, after which the original stubs are destroyed. The microfilms serve as permanent registration records. Of the 1,314.8 million Series E bond stubs received as of June 30, 1950, 1,254.9 million have been completely processed and 1,218.1 of the latter have been destroyed.

The great backlogs in these operations which resulted from the manpower shortage during World War II have been almost entirely eliminated, as indicated in the following table which shows the processing, at various stages, of the registration stubs of Series E savings bonds.

	Stubs	of issued S	eries E sav (in million			o office
Period	Stubs	Numeri-	Alphabetically sorted		Alpha-	Destroyed
	received	cally filmed	Restricted basis sort 1	Fine sort prior to filming 2	betically filmed	after filming

¹ Not complete alphabetical arrangement but sorted to a degree whereby individual stubs can be located. Includes those stubs fine sorted.

² Completely sorted.

The registration records of stubs of issued savings bonds of Series F and G are maintained in Chicago.

The audit of retired savings bonds is conducted in the regional offices of the Register of the Treasury. There were 84.4 million retired savings bonds of all series received in the regional offices during the year. Retired bonds are audited and then microfilmed, after which the bonds may be destroyed. Destruction of bonds commenced in the fiscal year 1950 when 317.2 million were destroyed. The bonds of all series received in these offices have been audited, microfilmed, and destroyed to the extent indicated in the following table.

	Retired savings bonds of all series in regional offices (in millions of pieces)						
Period	Bonds received in regional offices	Audited	Micro- filmed	Balance unau- dited	Balance unfilmed	De- stroyed	
Cumulative through June 30, 1946 Fiscal year:	27.9	19. 2		8. 7	27. 9		
1947	113.3	118, 4		3.6	141, 2	1	
1948	95.1	94.6	51.7	4. ĭ	184. 6		
1949	85.7	86. 8	171. 4	3.0	98. 9		
1950	84.4	83. 0	153.3	4.4	29. 9	317. 2	
Total	406. 4	402.0	376. 5	4.4	29, 9	, 317. 2	

After the retired bonds have been audited in the regional offices, a listing of the serial numbers is transmitted to the Chicago departmental office where the serial numbers are posted to numerical registers, and the postings verified. The following statement shows the status of the posting of all series of retired savings bonds.

Period	Retired s		ds of all se tillions of p	ries in the Clieces)	nicago office
	Number of retired		Statu	s of posting	
• .	bonds reported	Posted	Verified	Unposted	Unverified
Cumulative through June 30, 1946	454. 2	384. 0	313. 5	70. 2	70. 5
1947	137.9	195. 7	256. 5	12.4	9.7
1948	99.5	105. 2	110.8	6. 7	4.1
1949	92.5	96.8	94. 9	2. 4	6.0
1950	82.6	81.2	82. 2	3.8	- 5.0
Total	866. 7	862. 9	857. 9	3.8	5.0

Of the 78.8 million Series A-E savings bonds redeemed prior to release of registration and received in the regional offices during the year, 76.9 million, or 97.6 percent, were redeemed by over 16,000 paying agents, who were reimbursed for this service, in each quarter year, at the rate of 15 cents each for the first 1,000 bonds paid and 10 cents each for all over the first 1,000. The total amount paid to agents on this account during the year was \$9,558,666, which was at an average rate of 12.44 cents per bond.

The following table shows the number of issuing and paying agents

for Series A-E savings bonds, by classes.

June 30	Post offices	Banks	Building andfsav- ings and loan	Credit unions	Companies operating payroll plans	All others	,Total
			Is	suing agen	its

During the fiscal year, 8,728,509 Series G bond interest checks were issued with a value of \$446,579,998. This is an increase of about 145,000 checks over the number issued during 1949.

There were 37,213 applications during the year for the issue of duplicates of lost, stolen, or destroyed savings bonds, in addition to

907795---51-----8

2,710 cases on hand at the beginning of the year, making a total of 39,923 cases, of which 9,179 were credit cases referred to Washington for settlement. In 8,518 cases the bonds were recovered, and in 20,142 cases the issuance of duplicate securities was authorized. On June 30, 1950, only 2,084 cases remained unsettled.

Registered accounts for other than savings bonds.—During the year 14,000 individual accounts covering publicly held registered securities other than savings bonds were opened and 38,000 were closed, leaving a total of 358,000 such accounts open on June 30, 1950, covering registered securities in the principal amount of \$14.5 billion. There were 715,000 interest checks issued to owners of record during the

year, which was a decrease of 43,000 from 1949.

Armed forces leave bonds.—Through June 30, 1950, armed forces leave bonds aggregating \$2,088,672,000 in face value had been issued and \$1,783,447,000 had been retired, leaving a balance of \$305,225,000 outstanding on that date. The issues and retirements of armed forces leave bonds monthly during 1950, on the daily Treasury statement basis, are shown in table 21, and the accumulated issues and retirements of the issues outstanding on June 30, 1950, on the Public Debt accounts basis, are shown in table 17. The following statement shows the issues, retirements, and outstanding for selected periods:

Period	Issued	Retired	Outstand- ing at end of period
	In th	ousands of d	ollars
October 1, 1946, to April 30, 1947 May 1, 1947, to August 31, 1947 September 1, 1947 to October 31, 1947 November 1, 1947, to June 30, 1948 June 1, 1948, to June 30, 1949 June 1, 1949, to June 30, 1950	1, 721, 045 205, 557 90, 568 63, 866 7, 490 147	38, 151 23, 457 11,047,022 408, 252 171,054 95, 511	1, 682, 893 1, 864, 993 908, 540 564, 153 400, 589 305, 225

¹ Redemption on and after September 1, 1947, at owner's option, was provided in amendment to Armed Forces Leave Act, approved July 26, 1947.

The total number of armed forces leave bonds issued, including reissues, through June 30, 1950, was 10,113,171 and the number retired was 8,693,772. Of the total bonds issued, 6,927,881 were issued by the Army, 2,611,757 by the Navy, 415,354 by the Marine Corps, 157,540 by the Coast Guard, and 639 by the Division of Loans and Currency. This Division is now the only agency which issues these bonds.

Redeemed currency.—On July 1, 1949, the Division of Loans and Currency (Washington) had on hand 22,248 unaudited bundles (4,000 half-notes each) of United States currency that had been retired from circulation as unfit. During the year 333,634 bundles were received, an increase of 12,119 bundles over 1949; and 331,945 bundles were audited, leaving a balance of 23,937 unaudited bundles on hand on June 30, 1950.

The Destruction Committee supervised the incineration of redeemed canceled currency during the year as follows:

FISCAL SERVICE—OFFICE OF THE TREASURER OF THE UNITED STATES

The Office of the Treasurer of the United States is essentially a banking facility of the Government. The responsibilities of the Treasurer include the receipt of all public moneys; custody, issue, and redemption of United States currency and coin; payment of Government checks; custody of securities deposited in the Treasury as collateral or for safekeeping; and payment of principal and interest on the public debt. The Office of the Treasurer of the United States prepares the Daily Statement of the United States Treasury, which recapitulates all transactions in the accounts of the Treasurer, and issues monthly statements of the public debt and of currency outstanding.

Management improvement.—The Office of the Treasurer continued its program of improving operations and effecting economies. The major activity of the Office from the standpoint of personnel required is the payment of Government checks. Studies and reviews of this activity, facilitated by means of a system of cost and production reports, resulted in reductions in the unit salary costs for processing paper checks and card checks paid in Washington, 3 percent and 10 percent respectively, and 9 percent on card checks paid through

the Federal Reserve Banks.

Constant effort is directed toward the streamlining of procedures, one result of which was the discontinuance of the audit of paid interest coupons prior to their transmittal to the Register of the Treasury for final audit. This will result in annual savings of approximately

\$80,000 in the Office of the Treasurer.

Money received and disbursed by the Treasurer.—Moneys collected by Government officers are deposited with the Treasurer at Washington, D. C., and in Federal Reserve Banks and designated Government depositaries for credit of the account of the Treasurer of the United States, and all payments are charged against this account. Total receipts and payments for 1949 and 1950 are shown in the following table on the basis of the daily Treasury statement.

See table 1, footnote 7.

Assets and liabilities of Treasurer's accounts.—The assets of the Treasurer consist of gold and silver bullion, coin and paper currency. and deposits in Federal Reserve Banks and commercial banks designated as Government depositaries.

A summary of the assets and liabilities in the Treasurer's account at the close of the fiscal years 1949 and 1950 is shown in table 40.

Gold.—Gold receipts during 1950 amounted to \$484.7 million and disbursements totaled \$720 million, a net decrease of \$235.3 million. This decrease reduced the total gold assets to \$24,230.6 million on June 30, 1950. Liabilities against these assets were \$23,022.9 million of gold certificates and credits payable in gold certificates and \$156.0 million for gold reserve against currency. The million, was in the general fund on June 30, 1950. The balance, \$1,051.6

Credits during the year to the gold increment account, as a result of the revaluation of gold in relation to the dollar, amounted to This makes a total dollar increment from 1934 through \$82,444.84.

the fiscal year 1950 of \$2,819,221,746.09.

Silver.—During the year 26.5 million ounces of silver bullion, which had been carried in the general fund at a cost value of \$23.2 million, was monetized at a monetary value of \$34.3 million. million increase in silver assets was offset by a decrease of \$6.3 million in holdings of silver dollars, making a net increase of \$28.0 million in assets during the year. As of June 30, 1950, the silver assets of the Treasurer (exclusive of subsidiary coin and bullion held in the general fund at cost and recoinage value) amounted to \$2,342.9 million.

Liabilities against silver at the end of the year amounted to \$2,324.6 million for silver certificates outstanding and \$1.1 million for Treasury notes of 1890 outstanding, leaving a net balance of \$17.2 million in the

The silver bullion held in the general fund at cost value (exclusive of the \$17.2 million at monetary value) increased from \$88.3 million on

Paper currency.—Under the laws of the United States the Treasurer is the agent for the issue and redemption of United States currency and coin.

Table 81 shows by class and denomination the value of paper currency issued and redeemed during 1950, and the amounts outstanding at the end of the fiscal year.

A comparison of the amounts of paper currency of all classes issued, redeemed, and outstanding, follows:

	Fiscal 3	year 1949	Fiscal year 1950		
	Pieces	Amount	Pieces	Amount	
Outstanding at beginning of year Issues during year Redemptions during year Outstanding at end of year	2, 825, 197, 185 1, 724, 113, 091 1, 748, 990, 571 2, 800, 319, 705	\$30, 446, 577, 581 7, 246, 488, 000 7, 757, 292, 946 29, 935, 772, 635	2, 800, 319, 705 1, 761, 917, 277 1, 799, 873, 896 2, 762, 363, 086	\$29, 935, 772, 635 7, 440, 477, 100 7, 870, 101, 672 29, 506, 148, 063	

For further details on stock and circulation of money in the United States, see tables 77 to 81

States, see tables 77 to 81.

Depositaries.—The following table shows the number of each class of depositaries and balances at the end of the year:

Class	Number of facilities ¹	Deposits to the credit of the Treasurer, U. S., June 30, 1950
Federal Reserve Banks and branches. Other banks in continental United States: General depositaries. Special depositaries, Treasury tax and loan accounts. Insular and territorial depositaries. Foreign depositaries.	36 1, 214 11, 106 32 20	\$1, 093, 218, 624. 22 245, 447, 845. 91 3, 267, 784, 040. 29 24, 545, 455. 08 33, 211, 716. 82
Total	12, 408	4, 664, 207, 682. 32

¹ Does not include limited depositaries which have been designated for the sole purpose of receiving deposits made by Government officers for credit in their official checking accounts with such depositaries and which are not authorized to accept deposits for credit of the Treasurer of the U.S.

For details on the administrative work relating to designation of

depositaries, see page 84.

Checking accounts of disbursing officers and agencies.—During the year the Treasurer maintained 4.567 checking accounts of disbursing officers and Federal agencies, including those maintained at the Federal Reserve Banks as fiscal agents of the United States. The number of disbursing officers' accounts by classes and the number of checks paid during the fiscal year were as follows:

	19	49	1950		
Disbursing officers	Number of disbursing officers' accounts	Number of checks paid	Number of disbursing officers' accounts	Number of checks paid	
Treasury Army Navy Air Force Other	767 887 1, 395 140 1, 276	177, 886, 692 25, 136, 684 25, 193, 254 4, 191, 637 23, 992, 604	1, 295 854 1, 275 270 873	191, 475, 220 25, 024, 62 22, 842, 11 4, 979, 38 24, 999, 30	
Total	4, 465	256, 400, 871	4, 567	269, 320, 65	

Of the 269,320,659 checks paid in the fiscal year 1950, 223,366,186 were in the form of card checks. There were 204,696,414 checks paid by the Federal Reserve Banks acting as fiscal agents of the Treasurer and the remaining 64,624,245 were paid by the Treasurer in Washington.

The amount to the credit of checking accounts of disbursing officers and agencies on the books of the Treasurer of the United States on June 30, 1950, was \$7,627,516,906.60 as compared with \$7,135,391,447.41

on June 30, 1949.

Check claims.—During the year the Treasurer of the United States issued 25,239 checks totaling \$1,838,315.03 in settlement of claims for the proceeds of checks which had been paid bearing forged or unauthorized endorsements. The Chief Disbursing Officer issued 40,225 substitute checks totaling \$8,570,897.75 to replace unpaid checks which, it was claimed, had not been received, or were lost, destroyed, etc. Many additional claims were received but not honored because they were not well founded. Cases involving forgeries are investigated by the United States Secret Service. For information on check forgeries see the report of the United States Secret Service, page 134.

Treasurer's Cash Room.—The commercial checks, drafts, postal express money orders, etc., deposited by Government officers with the Treasurer's Cash Room in Washington for collection aggregated 3,501,748 items for the fiscal year 1950, as compared with 3,327,236

items for the fiscal year 1949.

Treasurer's Securities Division.—The public debt securities and interest coupons examined by the Division of Securities of the Treasurer's Office are as follows:

			Pie	ces
<i>i</i>			1949	1950

BUREAU OF INTERNAL REVENUE

The Bureau of Internal Revenue is responsible for the collection of the internal revenue and for the enforcement of the laws relating thereto. These laws include such statutes as the Federal Alcohol Administration Act (49 Stat., 977), as amended (27 U. S. C. and Sup. 201–212); the Liquor Enforcement Act of 1936 (49 Stat., 1928, 27 U. S. C., 211–228); and the Federal Firearms Act (52 Stat., 1250, 15 U. S. C., 901–909), which are regulatory in purpose and do not impose taxes.

Some of the major aspects of the Bureau's operations are discussed herein. A more detailed account will be found in the Annual Report of the Commissioner of Internal Revenue for 1950.

Collections

Internal revenue collections for the fiscal year 1950 totaled \$38,-957,125,591, a decrease of 3.7 percent from the total for the preceding year. Decreases occurred principally in the collections of income and profits taxes and miscellaneous internal revenue. increase was in the collection of employment taxes. The principal

Collections by tax sources for the fiscal years 1929-50 are shown in table 7 in the tables section of this report. A comparison of collections from the principal sources of tax revenue for the fiscal years

1949 and 1950 follows.

Source	Fiscal year 1949	Fiscal year 1950	Percent increase, or de-
	In thousand	ds of dollars	crease (-)

ENFORCEMENT ACTIVITIES

The campaign that was started in 1946 to strengthen the Bureau's enforcement program was vigorously pursued in the fiscal year 1950. The recruitment and training during the year of additional deputy collectors, auditors, revenue agents and special agents raised the enforcement personnel strength of the Bureau to a total approaching the number on the rolls prior to the personnel reductions made at the beginning of the fiscal year 1948. However, the benefits from the recruitment and training of additional enforcement personnel are cumulative, rather than highly fruitful for the first year or two. Consequently, they are not reflected to any substantial degree in the results of the Bureau's enforcement activities during the fiscal year 1950.

Additional assessments resulting from enforcement operations in 1950 totaled \$1.7 billion, as compared with approximately \$1.9 billion the preceding year. Distraint warrant collections, however, showed a 6 percent increase, reaching a total of \$368 million for the year. A comparison of the 1950 totals with earlier years is as follows:

Fiscal year	Additional assessments	Distraint warrant collections 1	Fiscal year	Additional assessments	Distraint warrant collections 1
	In thousan	ds of dollars		In thousand	ds of dollars
1942 1943 1944 1945 1946	438, 441 566, 058 730, 974 922, 428 1, 280, 218	62, 572 73, 127 83, 339 166, 488 198, 731	1947 1948 1949 1950	1, 928, 610 1, 897, 015 1, 891, 679 1, 747, 592	209, 455 280, 184 346, 509 368, 386

¹ Distraint warrant collections represent primarily collections of undisputed amounts which taxpayers have failed to pay when due. Occasionally, it becomes necessary to collect additional assessments by distraint warrant, but these cases represent only a small portion of the total distraint warrant collections.

Audits and investigations of income and profits tax cases accounted for 89 percent of the additional assessments made in 1950. These assessments resulted primarily from errors and omissions discovered in the routine audit of returns. Not counting special fraud investigations, 3,545,169 returns of all kinds—including 2,980,534 individual income tax returns and 190,778 corporation income and profits tax returns—were examined or investigated through direct contact, either personally or by correspondence, with taxpayers. The number of returns subjected to these enforcement activities was 15.4 percent greater than in the preceding year. There remains a large backlog of returns for the tax year 1947, which require prompt examination in order that assessment of the taxes properly due may not be prevented by statutory limitations. In addition, there are the many millions of returns for the tax years 1948 and 1949, which have a high potentiality of additional revenue upon audit.

In addition to the foregoing examinations, 3,120 fraud investigations were made, resulting in criminal prosecution recommendations against 1,048 individuals. Cash penalties of a civil nature were assessed in many cases which did not warrant criminal prosecution. Numerous investigations were made also under various regulatory statutes, especially the Federal Alcohol Administration Act (49 Stat.,

977), as amended (27 U.S. C. and Sup., 201-212).

The effectiveness of enforcement efforts is further indicated by the increasing number of persons convicted on tax evasion charges. The record of convictions, beginning with the fiscal year 1945, is as follows:

Fiscal year	Individuals convicted
5	
6	
8	 3
90	- š

WORK-LOAD

More than half of the total man-hours available to the Bureau during the year were spent in providing necessary facilities and services for the millions of taxpayers who settle their tax accounts voluntarily. Tax returns and directly related information documents aggregating 220 million were received, controlled, and filed. The taxes reported were assessed and accounting operations were performed in connection with the amounts paid in. In addition, the income tax liability of the more than 16 million taxpayers filing returns on Form 1040-A was computed for them, and income tax refunds and credits were scheduled for more than 29 million individuals whose prepayments exceeded their liabilities.

The total number of returns of all types available for enforcement action during the year was 160,383,997, consisting of 78,999,820 returns on hand at the beginning of the year and 81,384,177 returns filed or reopened during the year. The number of returns disposed of was 96,313,237, leaving a backlog of 64,070,760 returns awaiting action at the close of the year—a decrease of 18.9 percent as compared with the number at the beginning of the year. Of the number disposed of during the year, 3,545,169 returns were subjected to audit as described in the "Enforcement Activities" section of this report. There were 92,768,068 returns disposed of without audit or investigation. The wide variance in the amount of attention tax returns require; the fact that expenditure of investigative resources would be uneconomical in many cases; and the lack of enforcement personnel necessary for wider audit coverage are the primary reasons for disposing of such a large number of returns after only superficial examination.

In addition to the processing of an enormous quantity of returns and related information documents, the Bureau's work-load includes the disposition of many thousands of claims for adjustments based on section 722 and the various "carry-back" provisions of the Internal Revenue Code. Under the provisions of section 722, which allows relief from excess profits tax for corporations under certain circumstances, there had been filed as of the close of the year more than 54,482 applications for excess profits tax reductions totaling more than \$6 billion. There were 15,302 claims totaling \$4.5 billion still pending on June 30, 1950. "Carry-back" allowances of more than \$265 million were made during the year under the "quick refund" provisions of the Tax Adjustment Act of 1945.

Although much less numerous than the returns to be processed, the complexity and importance of these so-called "section 722 claims", and the carry-back adjustments, require the full-time attention of a large percentage of the best-qualified technicians in the Bureau.

Management Improvement Program

The Bureau continued in 1950 to place major emphasis upon management improvement. Notable progress was made in the utilization of time-saving operating equipment and in the development of more efficient procedures. Management savings during the year were estimated at 480 man years, exclusive of recurring savings from improvements made in prior years.

The use of punch card tabulating machines was extended to one more collector's office, and additional applications of the punch card technique were made in the six establishments already using such equipment. Several high-speed electronic calculators were installed in collectors' offices in seven of the largest cities, for use in the computation of the individual income tax on Form 1040-A and in the mathematical verification of individual income tax returns on Form 1040. Successful tests were made in four collectors' offices of the use of continuous-feed electric typewriters to speed up preparation of identification and account records, and also of new high-speed posting machines to make both original and subsequent postings direct to The installation of unit ledger cards, in lieu of assessment lists. metering devices for the collection of liquor taxes, in lieu of the conventional stamp, was authorized during the year, and a pilot model of such a device was constructed and demonstrated prior to testing by the Bureau of Standards.

Procedural improvements in the Bureau were many and varied. A combined return form for reporting both income tax withheld and Federal Insurance Contributions Act taxes was placed in use on a Nation-wide basis effective with the quarter beginning January 1, 1950. The combination of the two tax returns into one return form cuts in half the number of such returns that must be filed by employers and handled by collectors' offices. At the same time, the depositary receipt procedure was extended to Federal Insurance Contributions Act taxes, with provision for making deposits directly with Federal

Reserve Banks or through authorized local banks.

A program for an exchange of income tax audit information by the Federal and State Governments was initiated. Under this program it is contemplated that one audit made by either the Federal or State Government will serve the requirements of both Governments, thereby reducing the inconvenience to taxpayers caused by multiple audits and at the same time offering considerable possibility of operating economy.

An operational cost reporting system covering all office and field activities was introduced in twenty-seven collectors' offices as a means of obtaining information for general management purposes and statistics for the new performance type budget. The system will be

extended to all collectors' offices during 1951.

Under the Bureau's decentralization program, material reductions were effected in the Washington office in the number of clerical and technical operations involved in specific activities. One measurable result of this program was a reduction during the year of 251 in the

number of Washington office personnel.

Results in the first year of the audit control program, designed to increase compliance with the revenue laws, are summarized in the report "Administrative Management." The program for testing 1949 returns, which will be directed principally to business-income returns, has been extended to cover the returns of smaller corporations and to include returns of certain Federal excises. This is a long-range program, the benefits from which will be realized progressively over a period of years.

PERSONNEL

The number of employees on Bureau rolls at the close of the year was 55,551, consisting of 4,303 employees in the departmental service and 51,248 in the field service. At the close of the preceding year, the number of persons employed totaled 52,266, comprised of 4,554 departmental employees and 47,712 field employees.

Changes during the year in numbers of employees in the various branches of the internal revenue service are shown in the following

table:

Summary of personnel, Bureau of Internal Revenue, June 30, 1949, as compared with June 30, 1950

Grand total	52, 266	55, 551	3, 285

COST OF ADMINISTRATION

The entire cost of the Bureau's operations during the year, including all items of expense except amounts refunded to taxpayers, was \$230,408,200. The amount appropriated for administrative expenses was \$230,500,000; thus, there was an unexpended balance of \$91,800. The cost of collecting \$38,957,131,768 during the year was approximately 59 cents per \$100 of revenue, compared with 52 cents per \$100 in 1949, when collections were higher and expenditures were lower.

Data on the annual cost of administration, although of interest and value for certain purposes, can not be relied upon either as a guide to the proper scale of administrative activity or as a measure of relative efficiency of operation from year to year. An annual ratio of cost to collections is determined by many factors, most of which have no relationship to these objectives. To illustrate, the higher the level of tax rates and the more numerous the levies that are inherently economical to collect, the lower will be the average cost ratio. The prevailing level of salaries paid to Bureau personnel and the volume of essential services performed for taxpayers are other examples of these determinative factors. The increase in administrative costs during 1950 is due primarily to additional salary obligations

arising from a sizable increase in Bureau personnel and from the general pay increases provided for by the Classification Act of 1949 (63 Stat. 971).

REFUNDS

Refunds of internal revenue taxes and the interest thereon, as required by law, are paid out of an appropriation separate from that covering the Bureau's administrative expenses. The total amount of these payments for the fiscal year 1950 was \$2,216,834,210, as compared with \$2,902,742,898 in the preceding year. The decrease was attributable in part to the fact that many individual income tax refunds paid during the fiscal year 1949 were 1948 refunds deferred for payment because of the exhaustion of the 1948 appropriation for tax refunds. Interest payments on refunds increased from \$86,346,884 in 1949 to \$91,563,575 in 1950.

SETTLEMENT OF DISPUTES

In a large proportion of the tax disputes arising from the Bureau's investigative operations, settlements are reached through conferences with taxpayers, thereby avoiding expensive and time-consuming litigation. Of 55,241 income, profits, estate, and gift tax returns with respect to which the examiners' findings had been protested by the taxpayers, 47,321 were settled by the Bureau and 7,920 were appealed to the Tax Court. As a result of further hearings conducted by the Bureau in cases pending before the Tax Court, settlement by stipulation was effected with respect to an additional 4,864 returns, thereby reducing substantially the number of cases to be tried.

OFFICE OF INTERNATIONAL FINANCE

The Office of International Finance, under the general direction of an Assistant Secretary, advises and assists the Secretary of the Treasury in the formulation and execution of policies and programs in international financial and monetary matters. The Director of the Office is assisted by advisers on financial policy and by a staff organized into divisions corresponding to geographic areas or to the functional activities of the Office. These divisions are: National Advisory Council Secretariat; Stabilization Fund, Gold and Silver Division; International Statistics Division; Commercial Policy and United Nations Division; European Division; British Commonwealth and Middle East Division; Latin American Division; and Far Eastern Division. The Office also maintains Treasury representatives in several foreign countries.

By direction of the Secretary, the Office of International Finance is responsible for the Treasury's activities in matters of international financial and monetary policy, including international monetary and exchange problems, and gold and silver policy; the Bretton Woods Agreements Act and the operations of the International Monetary Fund and the International Bank for Reconstruction and Development; foreign lending and assistance programs; the activities of the National Advisory Council on International Monetary and Financial Problems; the Anglo-American Financial Agreement; and the United States Exchange Stabilization Fund.

The Office makes continuing studies of the flow of capital funds into and out of the United States and of the international accounts of foreign countries with special attention to transactions in gold and dollars. In carrying out its functions, the Office also studies the legislation and policy of foreign countries relating to finance, gold and silver, exchange rates and exchange controls, and other relevant matters.

The Office also provides economic analyses of the customs activities of the Department and advises the Secretary on international financial aspects of matters arising in connection with his responsibilities under the Tariff Act. The Office acts for the Treasury on the financial aspects of international treaties, agreements, and organizations in which the United States participates. It also participates in negotiations with foreign governments with regard to matters included within its responsibilities.

The Office of International Finance represents the Treasury in the work of the National Advisory Council on International Monetary and Financial Problems (of which the Secretary of the Treasury is Chairman) and its subordinate organs. Professional personnel of the Office perform staff and secretariat functions of the Council. (See

exhibits 27 and 29.)

The Office of International Finance advises Treasury officials and other departments and agencies of the Government concerning exchange rates and other financial problems encountered in operations involving foreign currencies. In particular, it advises the State Department and the Department of Defense on financial matters related to their normal operations in foreign countries and the special financial problems arising from military operations and in areas occupied by United States forces. The Treasury representatives in foreign countries act as financial advisers to the diplomatic missions, to the occupation authorities, and to the missions of the Economic Cooperation Administration.

LEGAL DIVISION

The General Counsel is by statute the chief law officer of the Treasury Department. He is directly responsible to the Secretary for the work of the Legal Division and performs other legal activities which the Secretary assigns or which are required by law. The Legal Division consists of the legal staff in the Office of the General Counsel, including the Tax Legislative Counsel, and the legal staffs of the Bureau of the Comptroller of the Currency, Bureau of Customs, Bureau of Internal Revenue, Office of International Finance, Bureau of Narcotics, Bureau of the Public Debt, and the United States Coast Guard.

The Office of the General Counsel advises the units of the Department not having legal staffs, including the immediate Office of the Secretary, Bureau of Accounts, Office of Administrative Services, Bureau of Engraving and Printing, Bureau of the Mint, Committee on Practice, Office of the Treasurer of the United States, United States Savings Bonds Division, and United States Secret Service.

The Office of the General Counsel coordinates the legislative work in the Department and does the related legal work. This includes appearances before congressional committees, the drafting of legisla-

tion, and the preparation of reports to committees of the Congress and to the Bureau of the Budget. Similar work is done in connection with Executive orders and proclamations and departmental rules and

regulations.

In addition to responsibilities in connection with tax legislation, the General Counsel, through the Tax Legislative Counsel, aids in the negotiation of treaties involving taxation; advises the United States delegate to the United Nations Fiscal Commission regarding international tax problems; studies proposals for amending the tax laws; reviews all proposed closing agreements with taxpayers; participates in the periodic revision of forms necessary to the administration of the revenue laws; and reviews proposed Treasury decisions amending regulations on internal revenue taxation.

Special fields in which the Office operates include gold and silver transactions and administration of the stabilization fund; Treasury participation in the activities of the National Advisory Council on International Monetary and Financial Problems, which coordinates the foreign financial and lending operations of the United States Government, including the policies and operations of the United States representatives on the International Monetary Fund and the International Bank for Reconstruction and Development; payments of Mexican claims and payments to holders of awards of the Mixed Claims Commission; and compromise settlement of general claims of the United States.

The Office also coordinates the Department's activities and handles the legal work in respect to a variety of other problems affecting the Treasury, such as the necessary pretrial work in litigation involving Treasury activities, the settlement of tort claims against the Treasury, the claims of Treasury employees for losses sustained in connection with assignments abroad, disclosure of official information, the patent rights of Treasury employees, the employee loyalty program under Executive Order 9835, and the licensing and disbarment of practitioners before the Department.

The activities of the Legal Division include consideration of the legal problems relating to broad financial, economic, and social programs, and international cooperation in the monetary and financial fields. The Division's activities also embrace all legal matters arising in connection with the duties and functions of the various bureaus, divisions, and branches of the Department. A more complete description of the scope of these activities is to be found in the

separate administrative reports of these organizations.

During the fiscal year 1950, the Legal Division handled a number of special problems, which are summarized in the paragraphs which follow. These included legal matters arising in connection with the National Security Resources Board and the Foreign Trade Zones Board, of which Boards the Secretary is a member. The Legal Division represented the Department on various interdepartmental committees, including one to recommend revisions in the inspectional overtime laws, and on various National Security Resources Board committees.

In the fields of international finance and aid, the Legal Division

dealt with legal problems arising in connection with financial, fiscal, and foreign exchange aspects of the European Recovery Program; assisted in formulating the financial and economic aspects of the programs and legislation relating to military assistance, technical cooperation, and measures to encourage American capital to be invested in foreign countries; participated in the meetings of the Contracting Parties to the General Agreement on Tariffs and Trade; and participated in the Transport and Communications Commission of the United Nations.

Technical assistance was given to congressional committees in connection with the drafting of legislation to implement the President's taxation and social security programs. The Legal Division studied proposals for the modification of excise tax laws, the closing of tax loopholes, changes in the estate tax structure, tax changes to implement extension of aid to underdeveloped areas, and changes in the corporate rate structure in connection with the general tax program; other miscellaneous revenue bills were also studied. It participated in preparing regulations under the Technical Changes Act of 1949 (Public Law 378, 81st Congress, approved October 25, 1949) pertaining to minor changes in the income, estate, and gift tax laws. Assistance was also given in the negotiation of tax conventions with the Governments of the Union of South Africa, Colombia, Venezuela, Cuba, Canada, Uruguay, Mexico, Switzerland, and Argentina; the negotiation of a treaty of friendship, commerce, and navigation with the Argentine Government; and in negotiations with the United Kingdom for the establishment of an agreement for joint government of the Canton and Enderbury Islands.

During the fiscal year 1950, the Legal Division coordinated and assisted in drafting legislation to reform customs procedures, the proposed Customs Simplification Act of 1950; and aided in many other aspects of the Department's program to simplify and modernize customs procedures. It participated in handling many special problems of importance under the statutes relating to foreign products which are dumped, subsidized, improperly marked, or produced by forced labor. It assisted in conducting the tripartite talks with Great Britain and Canada, and in following up and implementing decisions.

BUREAU OF THE MINT

The principal functions of the Bureau of the Mint consist of the manufacture of domestic and foreign coins; the acquisition of gold and silver, payments for which are made on the basis of mint assays; the safeguarding of the Government's holdings of the monetary metals, including coins in processing stages until finished and issued; the refining of gold and silver; the administration of regulations pertaining to gold and silver, including the issuance of licenses for the acquisition, ownership, possession, use, and exportation of gold for industrial; professional, and artistic purposes; and the production of medals and other decorations.

907795--51---9

The office of the Director of the Mint in Washington administers all activities of the Bureau of the Mint. During the fiscal year 1950 seven field institutions were in operation: Coinage mints in Philadelphia, San Francisco, and Denver; assay offices in New York City and Seattle; the gold bullion depository in Fort Knox, Ky.; and the silver bullion depository in West Point, N. Y., which operates as an adjunct of the New York Assay Office. Electrolytic refineries are maintained at the San Francisco, Denver, and New York City institutions. The Medal Department is located at the Philadelphia Mint. At the close of the fiscal year 1950 there were 943 persons employed in the departmental and field institutions compared with 1,272 at the beginning of the year.

The operations of the field institutions during the fiscal year 1950 and the report of this Bureau on the production and consumption of gold and silver in the United States during the calendar year 1949 are summarized herein. Further detailed information is contained in the Annual Report of the Director of the Mint, Fiscal Year Ended June 30,

1950.

Management program.—A management improvement program vigorously projected in 1950 and directed toward continuing improvements in operating procedures has produced revolutionary results in the manufacturing processes of coinage during the present fiscal year.

The massive melting and rolling equipment in the Denver Mint, which a year ago was in the experimental stage of operation, has been brought to a high state of efficiency. In it is processed a 400-pound bronze ingot in place of the 6-pound ingot, formerly processed in small rolling mills. It has also eliminated the hand pouring method heretofore used. Coincident with the installation of modern annealing equipment now pending, this equipment will be used for nickel and silver coinage.

A new type water-cooled mold, invented by mint technicians at the Philadelphia Mint, has resulted in a 23 percent reduction in silver ingot melting costs during the year. Experiments are now being conducted to utilize this equipment for production of nickel and bronze ingots. Recent realignment of the melting operations and other mechanical changes at the Philadelphia Mint will result in

important economies.

With the installation of more powerful motors on the rolling mills at the San Francisco Mint provision will be made for the processing of longer and wider ingots, and as a result an increase can be made of 100 to 300 percent in the production of coin blanks without increasing personnel. The output of 1-cent blanks will be doubled and dimes quadrupled; other denominations will come within that range.

OPERATIONS OF THE MINTS, ASSAY OFFICES, AND BULLION DEPOSITORIES

Domestic coinage.—Production of United States coins during the fiscal year 1950 totaled 497,271,759 pieces with a value of \$22,107,-498.66. Denominations were as follows:

	Denomination	Number of pieces produced	Face value
Quarter dollars Dimes		15, 938, 994 28, 582, 573 70, 976, 554	\$8, 059, 111. 00 3, 984, 748. 50 2, 858, 257. 30 3, 548, 827. 70 3, 656, 554. 16
Total	:	497, 271, 759	22, 107, 498. 66

¹ Includes 536,099 Booker T. Washington commemorative half dollars.

Foreign coinage.—Coins produced for seven other governments during the fiscal year 1950 totaled 94,267,944 pieces, as follows:

Government	Number of pieces produced	Government	Number of pieces pro- duced
China El Salvador	17, 640, 000 2, 000, 000	Mexico Venezuela	750, 000 17, 877, 944
Ethiopia Haiti Honduras	32,000,000 15,000,000 9,000,000	Total	94, 267, 944

Issue of domestic coins.—United States coins issued by the mints during the fiscal year totaled 500,914,823 pieces with a value of \$31,261,074.82. Denominations were as follows:

Denomination	Number of pieces issued	Face value
Silver dollars Half dollars. Quarter dollars Dimes	5, 951, 406 10, 574, 887 31, 210, 850 65, 784, 522 44, 178, 226 343, 214, 932	\$5, 951, 406. 00 5, 287, 443. 50 7, 802, 712. 50 6, 578, 452. 20 2, 208, 911. 30 3, 432, 149. 32
Total	500, 914, 823	-31, 261, 074. 82

Stock of coins.—The estimated stock of coins in the United States as of June 30, 1950, totaled \$1,872,619,658, of which \$492,582,858 were silver dollars, \$1,001,573,600 were subsidiary coins, and \$378,-463,200 were minor coins.

Medals.—The number of service medals and other distinguishing devices delivered to the Department of Defense and other Government departments and agencies totaled 29,570 during the fiscal year 1950. In addition, there were 6,073 medals sold to the public.

Bullion deposit transactions.—Bullion deposit transactions at the mints and assay offices totaled 10,589, including 16 intermint transfers during the fiscal year 1950. These transactions required 17,905 assay determinations, including 638 determinations for intermint transfers.

Acquisitions of gold.—Deposits and purchases of gold during the fiscal year totaled \$585,760,504.89, classified as follows:

	Value
Purchases at \$20.67+ per fine ounce	\$2, 412. 48
Increment to \$35 per fine ounce	
Purchases at \$35 per fine ounce	572, 191, 745. 88
Domestic coin transferred (melted)	257, 993. 35
Intermint transfers	13, 306, 679. 73

114 1950 REPORT OF THE SECRETARY OF THE TREASURY

Acquisitions of silver.—During the fiscal year deposits and purchases of silver totaled 107,885,995 fine ounces, classified as follows:

	Number of fine ounces
Newly mined domestic silver	38, 228, 805
Silver contained in gold deposits, etc	95, 326
Silver received in exchange for Government-stamped bars	
Recoinage bullion from uncurrent subsidiary coin	
Recoinage bullion from uncurrent silver dollars	205, 400
Intermint transfers of silver	
Deposits of silver in trust by foreign governments	11, 991, 097
Redeposits 1	55, 006, 812
Total	107, 885, 995

1 Consists of Treasury stock previously held by certain agencies of the Federal Government.

Refinery production of gold and silver.—During the fiscal year the refineries produced 2,267,708 fine ounces of gold and 2,317,468 fine ounces of silver by the electrolytic process. In addition, 3,078,190 fine ounces of gold and silver were subject to fire process only.

Issue bars manufactured.—The mints and assay offices manufactured 79,899 issue bars containing 18,179,815 fine ounces of gold and 1,197 issue bars containing 310,343 fine ounces of silver during the fiscal year.

Stock of unrefined bullion.—At the close of the fiscal year the stock of unrefined bullion at the mints and assay offices, in terms of the assayed fine metal content, amounted to 953 tons of gold and 510 tons of silver.

Monetization of silver bullion.—Silver certificates in the amount of \$34,275,555 were issued by the Treasury during the fiscal year against 26,510,000 fine ounces of silver bullion valued at \$1.29+ per fine ounce, the statutory monetary value of silver. Seigniorage, representing the difference between the cost and the monetary value of silver, amounted to \$11,026,197.04.

Sales of gold and silver for industrial use.—Sales of gold bars to licensed purchasers for industrial, professional, and artistic use totaled \$82,724,085.89 during the fiscal year. Under the act of July 31, 1946 (60 Stat. 750), which authorized sales of silver, there were no

transactions during the year.

Stock of monetary bullion.—The United States stock of gold bullion held by the mint institutions totaled 692,304,800 fine ounces valued at \$24,230,633,002 on June 30, 1950. On the same date the mint institutions held 1,151,473,202 fine ounces of silver bullion and, in addition, 180,714,089 fine ounces of silver bullion in a special custody account for the Treasurer of the United States. The silver in this account was formerly held by the Office of Reconstruction Finance Corporation, and is being melted and cast into regular mint bars.

Production and Consumption of Gold and Silver in the United States

During the calendar year 1949 the total production of gold and silver refined from ores mined in the several States and Alaska was as follows: Gold—1,921,949 fine ounces valued at \$67,268,215; and silver—34,944,554 fine ounces.

Gold issued for use in the industrial arts in the United States during

the calendar year 1949 aggregated \$148,975,571, and the return from industrial use of secondary materials, including old jewelry, plate, scrap, etc., amounted to \$40,133,100, giving a net consumption of gold of \$108,842.471.

Silver issued for use in industry and the arts in the United States during the calendar year 1949 aggregated 110,660,459 fine ounces, and the return from industrial use of secondary materials including old silverware, scrap, etc., amounted to 22,660,459 fine ounces, giving a net consumption of silver of 88,000,000 fine ounces.

BUREAU OF NARCOTICS 1

The Bureau of Narcotics is charged with the investigation, detection, and prevention of violations of the Federal narcotic and marihuana laws and of the Opium Poppy Control Act of 1942 (56 Stat. 1045), and related statutes. The scope of its activities is gradually enlarging as additional drugs are made subject to these laws. Under the act of March 8, 1946 (60 Stat. 38), eleven new synthetic drugs have been brought under control through findings by the Secretary of the Treasury, proclaimed by the President, that the drugs possessed addiction liability similar to morphine. A significant aid to the Bureau in the discharge of its duties was provided by Public Law 365, 81st Congress, approved October 20, 1949, under which moneys expended from appropriations of the Bureau for the purchase of narcotics, including marihuana, and subsequently recovered are reimbursed to the appropriation for the enforcement of the narcotics and marihuana laws current at the time of the deposit.

The Bureau directs its activities toward the suppression of the illicit traffic in narcotic drugs and marihuana and the control of the legitimate manufacture and distribution of narcotics through the customary channels of trade. It issues permits for import of the crude narcotic drugs and for export and in-transit movements of narcotic drugs and preparations. It supervises the manufacture and distribution of narcotic substances within the country, and has authority to issue licenses for the production of opium poppies to meet the medical needs of the country if and when such production should be found in the public interest. It cooperates with the Department of State in the discharge of the international obligations of the United States concerning the abuse of narcotic drugs and marihuana

Management was improved throughout the Bureau of Narcotics during the fiscal year 1950. The Bureau made every effort to improve operating methods so that funds thus saved could be used to develop investigations of major violations of the narcotic laws. Arrests for narcotic law violations were 1,048 more than during 1949. These results were achieved without any increase in personnel and with an additional appropriation of only \$50,000 available for this activity. The scope of enforcement activities is gradually enlarging to the point where additional money and personnel will be required to combat

the increasing illicit narcotic traffic.

During the year procedures were simplified and forms were revised and consolidated or eliminated, as circumstances warranted, in order

¹ Further information concerning narcotic drugs is available in the separate annual report of the Commissioner of Narcotics.

to relieve agents in the field of as much paper work as possible without sacrificing essential controls or lessening accounting responsibilities.

During the fiscal year 1950 the total quantity of narcotic drugs seized in the internal illicit traffic amounted to 1,698 ounces, in comparison with 1,726 ounces seized in 1949. Seizures of marihuana amounted to 752 pounds bulk, 23 pounds seeds, 21,313 cigarettes, and 64 growing plants, as compared with 707 pounds bulk, 6 pounds seeds, 25,591 cigarettes, and 59 growing plants in 1949.

The table following shows for the fiscal year 1950 the number of violations of the narcotic and marihuana laws by persons registered with collectors of internal revenue to engage in legitimate narcotic and marihuana activities and by persons who have not qualified by registration to engage in such activities, as reported by Federal narcotic enforcement officers.

Number of violations of the narcotic and marihuana laws reported during the fiscal year 1950, with their dispositions and the penalties

 Represents 69 cases which were compromised in the sum of \$12,020.

The importation, manufacture, and distribution of opium and its derivatives are subjected to a system of quotas and allocations designed to secure their proper distribution for medical needs. Addi-

tional quantities of opium were imported during the year. Coca leaf imports were sufficient for medicinal purposes, and additional supplies were available for the manufacture of nonnarcotic flavoring extracts.

The quantity of narcotic drugs exported was slightly higher than in 1949, but the total exported is not significant when compared with the amount used domestically. The manufacture of opium derivatives continued high principally by reason of the high medical consumption of codeine and papaverine.

Thefts of narcotics decreased during 1950, both in the number and

quantity of drugs stolen.

There were approximately 400,000 registrations under the Federal narcotic and marihuana laws during the fiscal year.

COMMITTEE ON PRACTICE

The Committee on Practice receives and acts upon applications of attorneys and agents for admission to practice before the Treasury Department. It makes inquiries, holds hearings and in general acts as the administrative and advisory agency in all matters pertaining to practice, makes recommendations to the Secretary of the Treasury, and performs other duties prescribed by Department Circular 230, revised.

The Committee also receives and acts upon applications of individuals, corporations, associations, and partnerships for customhouse brokers' licenses, issues customhouse brokers' licenses, makes recommendations to the Secretary of the Treasury, and performs other duties as prescribed by Department Circular 559, revised May 1, 1947.

The following statement summarizes the work of the Committee

for the fiscal year 1950:

Attorneys and agents:	Number
Applications for enrollment approved	_ 5, 550
Applications for enrollment disapproved	_ 14
Applications withdrawn on advice of Committee	_ 98
Applications abandoned by Committee	
Applications withdrawn with prejudice	
Resignations in good standing	
Special enrollment to practice before the Bureau of Internal Revenue:	
Applications approved by reason of examination	_ 4
Applications approved pursuant to standards and procedures base	ā
upon former service with the Treasury Department	51
Applications of former employees denied	22

Since the organization in 1921 of the Committee on Practice 92,565 applications for enrollment have been approved and 853 disapproved, 257 practitioners have been disbarred from further practice before the Treasury Department, 140 have been suspended from practice for various periods, 184 have been reprimanded, and 50 resignations have been accepted.

TAX ADVISORY STAFF

The Tax Advisory Staff of the Secretary has as its principal responsibility the economic analysis and preparation of material for use by

the Secretary in the formulation of Treasury tax policies.

In assisting the Secretary to discharge his responsibilities in the field of Federal taxation, the Staff explores the basic economic considerations involved in the formulation of the Administration's tax programs and in tax questions presented to the Secretary by the President, committees of the Congress, individual Members of Congress, other Government agencies, and the public. This requires broad economic surveys of tax problems, the assembly and presentation of statistical materials and analysis of the effects of alternative programs or measures for meeting revenue requirements. Upon request, information is furnished to the House Committee on Ways and Means, the Senate Finance Committee, and the Joint Committee on Internal Revenue Taxation.

These responsibilities also involve the consideration of State and local taxation in relation to Federal tax problems and the relationship

between United States and foreign tax systems.

During the fiscal year 1950 the work of the Tax Advisory Staff was concerned primarily with the preparation of material for an excise revision program with the resulting revenue loss to be compensated for by increases from other sources, including the closing of the most serious tax loopholes. This program was outlined to the Ways and Means Committee of the House of Representatives by the Secretary on February 3, 1950.

In the field of international tax relations the Staff assisted in the development of proposals designed to implement the President's Point IV Program and participated in the negotiation of tax treaties with several foreign countries. It also assisted in the Secretary's cooperative undertaking with representatives of State and local governments to arrive at a basis for an action program on some of the principal problems requiring coordination of Federal with State and local fiscal

policies.

OFFICE OF THE TECHNICAL STAFF

The Office of the Technical Staff in the Office of the Secretary serves as a technical staff for the Secretary on matters relating to Treasury financing, public debt management, and various general economic problems arising in connection with Treasury activities.

For use in policy decisions in these fields the Technical Staff works out possible courses of action, and keeps Treasury officials informed of shifts in the basic economic and fiscal situation. Primary factors in

The outbreak of hostilities in Korea on June 25, 1950, caused a drastic change in the proposed 1950 tax revision program while the bill was pending in the Senate. H. R. 8920, as modified, was enacted in Septem ber 1950.

debt management policy are the outlook for net cash flow into or out of the Treasury and the outlook for Federal budget receipts, expendi-

tures, surplus or deficit, the debt, and the cash balance.

In particular financing operations the Technical Staff draws up alternative plans, including what specific securities might be offered to tap various sources of new funds or in exchange operations. Terms for such securities are reviewed, including rate of interest, maturity, call period, negotiability, eligibility as collateral, redemption privileges accorded to holders, and restrictions as to the amount of purchases or

holdings by different classes of investors.

The Technical Staff analyzes the relation of these securities to the maturity schedule and interest cost of the public debt, the effect of their issuance on the market prices and ownership distribution of outstanding Government securities, and the impact of the Treasury's public debt operations on the banking system, the money supply, and the over-all credit structure. Alternative courses of action are weighed as to the probable effect on the general economy, with particular reference to their inflationary or deflationary impact.

The Technical Staff also works out analyses of the assets and the investment position of the various classes of investors, with particular reference to their problems in managing their Federal security port-It reviews the relative desirability of cash pay-offs to, and additional borrowing from, each investor class, and the types of securities

best suited to the requirements of each class.

The Technical Staff work also includes discussions with consulting committees composed of leading bankers, insurance men, bond dealers, The committees represent the American Bankers Association, the Investment Bankers Association, the Life Insurance Association of America and the American Life Convention, the National Association of Mutual Savings Banks, the Government Security Dealers group, and others. The groups confer with the Secretary from time to time and discuss their particular situations as well as the general aspects of public debt management. On these occasions the Secretary usually has the Technical Staff review developments and outline the problems ahead in the field of debt management. After these meetings the Technical Staff prepares reports for the Secretary to integrate the various reports and recommendations which were

The facilities of the Technical Staff also are utilized by the Secretary for the preparation of official estimates of Government receipts for incorporation in the President's Annual Budget Message and in intervening budget revisions. Similarly, estimates of the revenue

effects of proposed and pending legislation are prepared.

Technical mathematical analyses needed in connection with financing and public debt problems are also prepared. This work is under the supervision of the Government Actuary, who is an Assistant Director of the Technical Staff. He is responsible for reports on actuarial matters involved in Treasury operations, and prepares actuarial estimates required by statute with respect to the operations of Government trust funds. The Secretary of the Treasury is charged with the duty of handling the investments and other operations for most of these funds.

UNITED STATES COAST GUARD

The operations of the Coast Guard during the fiscal year ended June 30, 1950, embraced in general terms: Maritime law enforcement; saving of life and property at sea; providing navigational aids to maritime commerce and to transoceanic air commerce; promoting the efficiency and safety of the American merchant marine; and maintenance of a state of military readiness.

Throughout the year the Coast Guard utilized its available personnel and facilities to the best advantage in carrying out these activities. However, lack of sufficient personnel and facilities prevented a desired expansion in the field of assistance, search, and rescue. Operations in the field of electronic navigational aids to maritime and air commerce were restricted below a desired minimum level for the same

reason.

Pursuant to a directive from the Bureau of the Budget to the Secretary of the Treasury, an objective survey, conducted by a special panel of Coast Guard officers, was completed. The recommendations of the Board concerning "specific lifeboat stations, light stations, and light vessels which could be disestablished in the interests of economy without increasing maritime hazards" have been submitted to the President.

Another special objective survey is being conducted by a panel of Coast Guard officers to re-evaluate the requirements for air stations,

air detachments, and aircraft.

During the year several projects in the management field were carried forward. Principal among these was the development of new internal accounting and supply systems. The new accounting system is described in the report "Administrative Management" and the supply system in the section which immediately follows.

MANAGEMENT IMPROVEMENT

The benefits derived from the study of the Coast Guard operations during the fiscal year 1948 by a private firm of management consultants have demonstrated the effectiveness of this procedure to further management improvement. Two additional contracts have been signed with private consultants to conduct studies of current major problems. The first of these studies will constitute a complete survey of the Coast Guard Yard at Curtis Bay, Maryland, the Service's principal industrial plant and shipyard. This study will embrace the organization and administrative practices and controls at the yard, and its production management and industrial processes. The second study will be a detailed classification survey of the military and civilian jobs at thirty selected "type" shore stations. This will serve as a basis for the future Service-wide program on job analysis, specification, evaluation, classification structure, and coding, and on the development of comprehensive information looking toward expansion of the present work measurement program. It is expected that both of these special studies will be completed during the calendar year 1950.

Under the supply improvement program four of the ten authorized district supply depots were established during the fiscal year 1949 and

the remaining six should be in operation by the end of the calendar year 1950. Formal agreements were recently made under which the Navy will supply the Coast Guard with items of equipment and consumables common to the two Services. This procedure will eliminate the necessity for frequent open market purchases by the Coast Guard.

A special survey board has been appointed to evaluate, and make recommendations with respect to the location, disposition, utilization, effectiveness, etc., of existing air facilities and aircraft. The objective of this study is general improvement in the efficiency, economy, and effectiveness of the Coast Guard aviation program. Completion of this study is scheduled for the end of the calendar year 1950.

The first phase of the program to strengthen the statistical system of the Coast Guard by a further centralization of statistical services and the establishment of a strong central reports review and control has been accomplished. Increased effectiveness will be realized during the fiscal year 1951 with the proposed establishment of a central

statistical service division at Headquarters.

During 1950 the central management group initiated a series of field management surveys to make systematic reviews of operations looking toward general improvement in management practices. One survey trip on the east coast and another on the west coast have been

completed.

The Administrative Management Division has completed a long-term revision of the Organization Manual of the Service, which, with a new Filing Manual, also recently completed, will provide more effective guidance to the several administrative levels of the Coast Guard organization.

LAW ENFORCEMENT

In addition to the general enforcement of Federal laws on the high seas and territorial waters of the United States, the Coast Guard assisted those departments and agencies of the Government having primary responsibility in the enforcement of the Oil Pollution Act, Anchorage Regulations, laws relating to internal revenue, customs, immigration, quarantine, and laws and regulations for the conservation and protection of wildlife and the fisheries. Only 39 reports of oil pollution violations were received which reflected considerable improvement over the fiscal year 1949, during which twice that number of violations were reported. Full cooperation in law enforcement matters was extended to all Federal, and to many State and municipal, law enforcement agencies.

Coast Guard districts were divided into law enforcement zones and a captain of the port, under the district commander, was designated for each zone in order to facilitate execution of the Coast

Guard's Federal law enforcement function.

Assistance Operations

In carrying out responsibilities with respect to search and rescue—the saving of life and property—the Service maintains an established organization of inshore and offshore surface rescue vessels, aircraft, lifeboat stations, and radio stations, together with rescue coordination

centers in each Coast Guard district. The assistance rendered by stations, vessels, and aircraft during the year is reflected in the following statistics:

Number of assistance calls responded to	10, 440
Number of instances of major assistance	3, 860
Number of instances of minor assistance	4, 782
Value of vessels and aircraft assisted	\$210, 489, 172
Value of cargo of vessels and aircraft assisted	\$22, 932, 918
Lives saved or persons rescued from peril	7, 619

The term "major assistance" signifies the rescue of persons from water or from drifting ice, the removal of persons from endangered vessels, the towing to safety of vessels on which personnel are endangered, and, during floods, the removal of persons to safety when danger of drowning threatens. When Coast Guard aircraft are employed, "major assistance" includes open-sea landings and take-offs under abnormally hazardous conditions.

The difference in the number of calls responded to and the number of instances of assistance reflects those cases in which the Coast Guard responded but assistance was given by some other source or was no

longer possible.

In collaboration with other Government agencies, the Red Cross, and local authorities, the Coast Guard rendered extensive assistance in evacuating citizens and salvaging property during the floods which occurred in the valleys of the Mississippi, the Red River of the North, the Red River of the South, and the Columbia River.

Considerable assistance was rendered to marine commerce on the Great Lakes in the breaking of ice for the passage of vessels. Although the opening of the Lakes to navigation was somewhat later than usual this year, the ice breaker U. S. C. G. C. Mackinaw, with a helicopter attached, was instrumental in an earlier opening than would otherwise have been possible.

INTERNATIONAL ICE PATROL

The postseason activities of the International Service for Study and Observation of Ice Conditions in the North Atlantic for the 1949 season continued into the fiscal year 1950 and consisted of an oceanographic survey in Baffin Bay and Davis Strait and a census of icebergs in Baffin Bay. The oceanographic survey was carried out by the U. S. C. G. C. Evergreen during the month of July 1949 while the iceberg census was accomplished by two long-range aircraft and the U. S. C. G. C. Winnebago.

The 1950 Ice Patrol season was inaugurated by aerial ice reconnaissance flights on February 24, 1950. Beginning March 26, because of the menace of icebergs in the United States-Europe shipping lanes, a continuous surface vessel patrol was established by the U.S. C.G. C. Acushnet and the U.S. C.G. C. Tampa. When the ice situation no longer presented hazards to the shipping lane, the surface patrol was discontinued on June 10. The service of International Ice Patrol for the 1950 season was discontinued on June 26, 1950

the 1950 season was discontinued on June 26, 1950.

The scientific aspects of the International Service of Ice Observation and Ice Patrol were carried out by the oceanographic vessel, U. S. C. G. C. Evergreen; and, as last year, a postseason oceanographic

cruise to Davis Strait and Baffin Bay is planned.

BERING SEA PATROL

The Bering Sea Patrol was continued this year. The purpose of the patrol is the protection of life and property; protection of the seal herds and other wild life; law enforcement and transportation of a floating court in the administration of justice; and the furnishing of medical and dental assistance to natives and others in remote localities in the areas contiguous to the Bering Sea and Arctic Ocean. The major part of this patrol was accomplished by the U. S. C. G. C. Northwind.

OCEAN STATIONS

During the year, the number of ocean stations maintained by the Coast Guard in the North Atlantic was decreased from 7½ to 5%. This was brought about by the discontinuance of 2 stations and a change in the agreement with Canada for joint occupation of 1 station whereby the Coast Guard became responsible for its maintenance for two thirds rather than for one half of the time. In the North Pacific, the number of stations maintained was increased from 2 to 3. While engaged in this duty, Coast Guard vessels made 56,456 weather reports, made 19,660 radio contacts with aircraft, gave assistance in 63 cases, and cruised 668,643 miles.

AIDS TO NAVIGATION

On June 30, 1950, 37,702 aids to navigation were maintained in the navigable waters of the United States, its Territories, and its possessions, and at overseas military bases. These aids consisted of many different devices, ranging from simple unlighted wooden spar buoys to light stations, lightships, and complex loran (electronic long-range aids to navigation) networks. During the year, 2,093 new aids were established and 1,746 aids were discontinued, resulting in an increase of 347 compared with the number maintained on June 30, 1949. This increase was due principally to the establishment of aids to navigation required for the marking of completed rivers and harbors improvements.

In addition to 8 loran stations in the United States, 22 others, located in widely separated and isolated localities (Greenland, Labrador, Newfoundland, Alaska, the Philippines, and the islands of the Pacific), provide navigators traversing the military and civil air and sea routes of the North Atlantic and Pacific Oceans with means for accurate and quick determination of their positions at all times, regardless of weather conditions. Coast Guard cutters and aircraft were utilized in providing frequent logistic service to these isolated

and distant stations.

MARINE INSPECTION AND SAFETY MEASURES -

Among the duties which the Coast Guard performed in promoting safety in the merchant marine and on navigable waters were approval of plans for the construction, repair, and alteration of vessels; approval of materials, equipment, and appliances; issuance of certificates of inspection; administration of loadline requirements; licensing and certificating of officers, pilots, and seamen; investigation of marine

casualties; enforcement of manning requirements, citizenship requirements, and requirements for the mustering and drilling of crews; control of logbooks; shipment, discharge, protection, and welfare of merchant seamen; promulgation and enforcement of rules for lights, signals, speed, steering, sailing, passing, anchorage, movement, and towlines of vessels, and of regulations governing the transportation of explosives and other dangerous cargoes aboard vessels; numbering of undocumented vessels; prescription and enforcement of regulations for outfitting and operation of motorboats; licensing of motorboat operators; and the regulation of regattas and marine parades.

A digest of certain phases of the marine inspection activities follows:

	Number of vessels	Gross tonnage of vessels
Annual inspections completed 1	6, 125	16, 847, 851
Drydock examinations	5, 090	19, 610, 185
Reinspections	2, 949	12, 146, 075
Special surveys (passenger vessels)	176	
Special examinations by traveling inspectors on pas-	0.05	· · · · · · · · · · · · · · · · · · ·
senger vessels and ferries	90 ~	100000000000000000000000000000000000000
Miscellaneous inspections	12, 586	
Miscellaneous inspectionsUndocumented vessels numbered under provisions		
of the act of June 7, 1918, as amended (46 U.S.C.		
288) (this is an increase of 6,219 over the previous		, ,
fiscal year)	452 , 32 7	
		4 49

¹ Includes 234 vessels, totaling 490,004 gross tons, which were conversions or new construction completed during the year.

There were 2,731 marine casualties reported of which 2,239 were investigated, 18 of these by formal Marine Casualty Investigation Boards. Of the 272 lives lost in 119 casualties, only five passengers lost their lives on inspected and certificated vessels and no vessels of over 1,000 gross tons were lost as a result of marine hazards.

Two serious marine casualties occurred and were investigated by the Coast Guard. The first of these was the explosion of munitions while being loaded on barges at South Amboy, N. J., which caused 31 persons to lose their lives. The second was the collision between the Norwegian freight ship Ravnefjell and the Great Lakes passenger steamer City of Cleveland III, which resulted in the death of four pas-

sengers on the steamer.

Under the provisions of the act of May 27, 1936, as amended (46 U. S. C. 369), requiring approval by the Commandant of the Coast Guard of all contract plans and specifications for building or altering passenger vessels of the United States of one hundred gross tons and over, 13,388 vessel plans were examined to determine conformance with applicable regulations. Plans covering items of equipment which require approval by the Commandant for use on merchant vessels were reviewed and 178 such items were approved.

In order to assess the fire hazard which exists with modern types of stateroom construction, a fire test, using an actual size stateroom, was conducted with the National Bureau of Standards. The stateroom was constructed of aluminum and was furnished with metal beds and metal furniture. The draperies, bedspreads, mattresses, and chair upholstery were given a fire retardant treatment, and in the room was placed actual baggage such as might be brought aboard by the passengers. The fire severity obtained during the test was

measured and recorded, and the results will provide a factual basis for use in the development of standards for fireproof construction to

safeguard properly a vessel against fire in this type of space.

The monthly periodical entitled "The Proceedings of the Merchant Marine Council," United States Coast Guard, was published to promote safety of life at sea and was distributed free to seamen, ship owners, operators, and the various Government agencies concerned with the merchant marine. This publication contained feature articles of interest to the merchant marine, lessons taken from actual casualties occurring in the merchant marine, advance notices regarding changes in regulations, and other statistics of interest to the merchant marine.

MERCHANT MARINE PERSONNEL

The licensing and certificating of merchant marine personnel covered the issuance of 75,148 documents. Of this number, 15,246 were issued to men who had not previously served in the merchant marine, and 1,264 were licenses issued to radio officers under the provisions of the act of May 12, 1948 (62 Stat. 232). In the process of regulating the orderly conversion of the merchant marine from wartime to peacetime operation, 236 individual waivers of manning requirements were issued. Shipping commissioners supervised the execution of 13,699 sets of shipment and discharge shipping articles.

Merchant Marine Investigating Units in major domestic ports and Merchant Marine Details in certain foreign ports continued to operate in the administration of discipline in the merchant marine as required by the act of February 28, 1871, as amended (46 U. S. C. 239). Merchant Marine Details in London, Antwerp, Bremerhaven, Naples, Trieste, and Piraeus operated throughout the year. The detail in Antwerp was reestablished July 1, 1950, after having been closed for about two years. During the year, 6,050 investigations of cases involving negligence, incompetence, and misconduct were made. As a result of these investigations charges were preferred and hearings held on 806 cases by civilian examiners.

PERSONNEL

On June 30, 1950, the military personnel strength of the Coast Guard on active duty consisted of 2,073 commissioned officers (1,734 Regular, 206 temporary service, 133 Reserve), 406 commissioned warrant officers (350 Regular, 56 temporary service), 427 warrant officers (82 Regular, 345 temporary service), 296 cadets, and 19,988 enlisted men.

The authorized force of civilian employees at Coast Guard Headquarters on June 30, 1950, was 734. In the field service there were 1,419 salaried personnel, 2,589 wage board employees, and 665 lamp-

lighters.

Upon the enactment of Public Law 351, 81st Congress, approved October 12, 1949, new procedures with respect to physical disability retirements were instituted and the reevaluation of personnel retired for physical disability prior to October 1, 1949, was begun. Also pursuant to the law and prescribed regulations, warrant officers were distributed in various grades for pay purposes,

On June 2, 1950, 68 cadets graduated, after satisfactorily completing the 4-year course at the Coast Guard Academy, and were commissioned as ensigns. In the 1950 Nation-wide competitive examination for appointment as cadets, 507 candidates from among 1,351 participants received passing grades; and it is expected that 215 will be appointed as the class of 1954. The 1950 summer practice cruise for practical sea training was made aboard the cutters Campbell and Eagle, and included visits to European ports.

An officer procurement program was carried on during the year. Regular officers for the Coast Guard are being obtained from the inactive Coast Guard Reserve, by the selection of commissioned warrant and warrant officers or enlisted men in the Coast Guard who formerly held temporary commissions, and from among qualified

merchant marine officers.

Of the 13,806 men who applied for enlistment in the Coast Guard, 3,227 were enlisted, 3,327 were rejected for physical reasons, 6,314 were rejected for other reasons, 595 were accepted but failed to enlist, and 343 applications were pending on June 30, 1950. There were 2,369 recruits received during the year at Cape May, N. J., Receiving Center, and beginning in September 1949 the recruit training period

was increased to 12 weeks.

Public Law 351, 81st Congress, approved October 12, 1949, provides that, in the case of any member whose total compensation on September 30, 1949, exceeded the amount of total compensation to which he would have become entitled under the act, if application is made within one year from October 1, 1949, the effective date of the act, he shall be discharged. During the period from October 1, 1949, to June 30, 1950, 961 enlisted men were discharged pursuant to this provision of law, and this loss contributed greatly to the deficiency in enlisted personnel strength at the end of the year.

On June 30, 1950, 17 medical officers, 28 dental officers, 10 nurse officers, 1 scientist officer, and 1 sanitary engineer officer of the Public

Health Service were on detail to the Coast Guard.

COAST GUARD RESERVE

The revitalization of the Coast Guard Reserve and the initiation of a large scale training program were not possible during the year since no funds were appropriated for those purposes. Estimates of appropriations were again submitted by the President for the consideration of the Congress for training Reserve personnel to enable the Coast Guard when operating as a part of the Navy in time of war or national emergency to perform those duties which have been delegated to the Service.

Reserve Directors in the respective Coast Guard districts established volunteer training units where personnel and facilities per-Where circumstances did not permit Coast Guard Reserve officers to form such units, arrangements were made for them to associate with naval activities. Additional training was provided by offering Naval Reserve correspondence courses to members of the Coast Guard Reserve and approximately 1,000 such courses were completed by Reserve officers. Through the cooperation of the Naval Reserve Air Training Command, a limited number of Coast Guard Reserve aviators were permitted to participate as individuals in vol-

unteer units of the Naval Reserve Air Training program.

During the year, 116 Coast Guard Reserve volunteer training units were established, and of this number 71 were scheduling drills and meeting regularly. Some 3,200 officers were assigned to these 71 units and of this group approximately 28 percent were regularly participating in unit training activities. It is estimated that 25 percent of the total Reserve officers (4,132) were participating in volunteer training during the year.

Reappointments were offered to 1,440 Reserve officers, of which 882 accepted. At the end of the year, the Reserve numbered 4,132

commissioned and warrant officers and 391 enlisted personnel.

COAST GUARD AUXILIARY

The Coast Guard Auxiliary is a nonmilitary organization sponsored by the Coast Guard to assist it in promoting safety and in effecting rescues on and over the high seas and on navigable waters; in promoting efficiency in the operation of motorboats and yachts; in fostering a wider knowledge of, and better compliance with, the laws, rules, and regulations governing the operation of motorboats and yachts; and facilitating other operations of the Coast Guard. The Auxiliary had a membership of 12,164 on June 30, 1950, with an affiliated ownership of 6,251 boats, 317 planes, and 156 radio stations. In addition to the requirements that members maintain a high standard of efficiency in engineering, safety, navigation, and operating practices, the members gave approximately 15,000 courtesy motorboat inspections and small-boat seamenship training to approximately 2,400 nonmembers, provided safety patrols for regattas and marine parades, and carried on a vigorous program of safety education and self-help under the general auspices and guidance of the Coast Guard.

FACILITIES AND EQUIPMENT

Floating units.—On June 30, 1950, the floating units in active commission consisted of 177 cutters of various types, 50 patrol boats, 37 lightships, 41 harbor tugs, and 10 buoy boats. During the year these vessels cruised 2,085,952 miles in carrying out Coast Guard duties.

In addition to the larger floating units there were 177 motor lifeboats, 1,577 motorboats, and 2,295 nonpowered craft in operation

aboard ships and at shore installations of the Service.

Shore establishments.—The 17th Coast Guard District was reestablished on July 1, 1949, with the district office located in Juneau, Alaska. This district embraces the Territory of Alaska and adjacent waters. Its reestablishment increased the number of Coast Guard districts to twelve.

Authorized shore units as of June 30, 1950, included 9 air stations, 12 bases, 41 depots, 170 lifeboat stations, 429 manned light stations, 78 light attendant stations, 30 loran transmitting stations, 49 marine inspection offices, 12 primary radio stations, 1 shipyard, 2 supply

907795--51----10

centers, 9 supply depots, 1 academy, 1 training station, and 1 receiving center.

Aircraft.—During the year the Coast Guard operated 79 fixed and rotary wing aircraft deployed from nine continental air stations and eight air detachments. One new air detachment was established and commissioned at San Juan, Puerto Rico. Other air detachments beyond the continental limits of the United States were located at Argentia, Newfoundland; Honolulu, T. H.; Guam, M. I.; Sangley Point, P. I.; Annette Island, Alaska; and Kodiak, Alaska.

In carrying out the aviation program of the Coast Guard, the aircraft were flown approximately 11,333 sorties for a total of 31,183.7

hours.

Communications.—The Coast Guard maintained and operated an extensive communications system to provide for rapid, essential communications between its units. This includes the operation of rescue control centers which provide for liaison and coordinated communications with all rescue agencies using multiple circuits both military and commercial.

Navy and other Government facilities are used where available to avoid duplication. Commercial landlines, where available, are augmented by Coast Guard-owned landlines and submarine cables to

connect isolated units.

Strategically located, primary, secondary, base, and radio stations (aero) provide communications with cutters, patrol craft, and aircraft. These facilities are employed for handling distress traffic and for broadcasting both routine and urgent marine information.

Isolated shore units having no landline facilities available are radio equipped. More important shore units are also radio equipped to provide for a casualty circuit in the event of landline failure.

Excess vessels and property.—During the year, excess vessels with an acquisition value of \$2,121,530.36 and other excess property with an acquisition value of \$1,711,111.17 were disposed of.

Construction and Development

Maintenance, repair, and modernization of the Coast Guard's 22,000 fixed structures, and the repair and improvement of mechanical equipment continued throughout the year. Approximately 6,000 projects for construction, repair, and maintenance were undertaken.

A continuing program of test and development was carried on during the year in technical fields directly related to the Coast Guard's statutory responsibilities. Emphasis was placed on those developments showing long range promise of effecting substantial economies in performing present duties. As a result of the development program new standards for shipboard and buoy painting were placed in effect, which lower material cost and give improved performance. The adoption of more effective techniques of maintaining wooden boats will extend their useful life and reduce annual hull maintenance costs. Technical requirements as to construction of staterooms on passenger vessels were validated by a full scale fire test.

Significant development programs which are in progress are: Fiberglass and aluminum boat construction aimed at producing longer

lived boats at lower annual costs; redesign of standard buoys to better serve radar equipped vessels; improving radar beacons so as to provide a practical tool at reasonable cost; preventing deterioration of service material so as to reduce annual maintenance and replacement costs; studying practicable methods of improving motorboat safety and investigation of methods of making present loran service more useful to mariners.

Two lightships under construction by a commercial shipbuilder in East Boothbay, Maine, were launched, and completion and delivery are scheduled for the fall of 1950. Construction was begun on a third lightship at the Coast Guard Yard. These three vessels will replace

overage lightships now in service.

Reconstruction of 15 loran stations in the Hawaiian, Japanese, and Marshall chains was started, including relocation of the Marianas chain.

Two new lighthouses in the Aleutian Islands were completed during

the year at Scotch Cap and Cape Sarichef.

A chain stopper for use on buoy tenders in servicing buoys was designed and installed on several vessels for testing. This chain stopper eliminates much of the manual handling of buoy chain in the operations of removing and replacing buoys and experience to date indicates that it speeds up the work and greatly reduces the hazard to personnel.

Production was begun on a 40-foot utility boat for replacement, as such becomes necessary, of 38-foot cabin picket boats, 30-foot rescue boats, and various miscellaneous craft. This boat is a development of a single prototype 38-foot utility boat built last year for testing

and evaluation.

Several installations of modern postwar search radar have been made at shore lifeboat stations and further operational information is being collected regarding the usefulness of this equipment for pro-

tection of life and property on our coasts.

Helicopters were equipped with added safety devices designed in former years, with particular reference to emergency flotation. Stabilization was further investigated with gratifying results. Helicopters were modernized and steps taken to standardize all of a type to insure greater familiarity and safety in operation. Hydraulic controls were added for reduced pilot fatigue and greater operational

efficiency.

The Ship Structure Committee, through joint efforts of the Army, Navy, Coast Guard, Maritime Administration, and the American Bureau of Shipping, has made considerable progress during the year toward the solution of the problem of cracking or breaking apart of welded ships' hulls. With the advantages of welded construction clearly apparent and with fractures still occurring the Ship Structure Committee has attacked the problem through basic research programs in the fields of design, materials and fabrication, with the assistance and cooperation of the National Academy of Sciences, the National Bureau of Standards, the American Iron and Steel Institute, the Welding Research Council, and the British Admiralty Welding Committee.

Funds Available, Obligations, and Balances

During the fiscal year 1950 the sum of \$625,900 was expended for mustering out payments under the provisions of the act of February 3, 1944, as amended (38 U. S. C. 691). In settlement of unused leave under the Armed Forces Leave Act of 1946 (60 Stat. 963), \$2,511 was paid to 15 claimants.

The following table shows the amounts available for the Coast Guard during 1950, and the amounts of obligations and unobligated belonges:

	Funds available	Net total obligations	Unobligated balances
Current operating appropriation: Salaries, office of Commandant.	\$2, 515, 000 82, 520, 000	\$2, 502, 030 80, 477, 401	\$12,970 2,042,599

UNITED STATES SAVINGS BONDS DIVISION

The principal function of the United States Savings Bonds Division of the Treasury Department is to promote and effect the sale of United States savings bonds.

The Savings Bonds Division is headed by a National Director, serving without compensation, who is also an Assistant to the Secretary of the Treasury. His chief aide is a National Director of Sales under whom function the following eight divisions: Publicity and Promotion, Payroll Savings, Banking and Investments, Education,

Labor Organizations, Community Activities, Agriculture, and Advertising. A Nation-wide organization of volunteers, under the direction of State and local advisory chairmen and aided by more than 25 national advisory committees, all serving without compen-

sation, carry forward the sales activities of the Division.

The cost of promoting the savings bond program is held to a minimum because of contributions of advertising by newspapers, magazines, radio and television industries, outdoor and transportation advertising businesses, and various other media, as well as by a great many national and local advertisers. These contributions by national advertisers and their agencies are made through the Advertising Council, Inc., a voluntary nonprofit organization of the advertising industry for the support of public service programs.

The "Independence Drive," having as its theme the encouragement of thrift and the fostering of public interest in the affairs of the Government, was the major campaign effort of the year. The Drive was conducted from May 15 through July 4, 1950, and the national sales quota of \$650 million in Series E bonds was exceeded by 10 percent. The volunteer efforts of thousands of workers and the contribution of all types of promotional media contributed greatly to the success of

the Drive.

The symbol for the Drive was the Liberty Bell, exact reproductions of which were displayed in each of the 48 States and in Alaska, Hawaii, Puerto Rico, the Virgin Islands, and the District of Columbia. At the conclusion of the Drive, these reproductions were presented by the Secretary of the Treasury to the geographical units in which they had been exhibited, with the intention that the bells should be kept permanently on public, noncommercial exhibition. A bronze plaque accompanied each bell memorializing the purpose of the gift. The plaque named the six American copper companies which provided funds for the purchase of the bells, the steel company which furnished supports for the bells, and the copper fabricating company which donated the plaques.

Throughout the year the Savings Bonds Division, effectively supported by an Industrial Advisory Committee made up of 28 nationally known industrialists and bankers, as well as by numerous industrial and trade organizations, carried out an intensified campaign to increase participation in the payroll savings plan. This plan facilitates regular investment in savings bonds by wage and salary earners. The stimulation of payroll savings contributed materially to the extension of the plan, particularly in the steel, petroleum, glass,

and railroad industries.

The Interdepartmental Savings Bond Committee, allied with the Federal Payroll Savings Section to promote savings bond sales to Government employees, reported total sales during the year of \$319 million, a gain of \$25 million over the preceding year. This gain was accomplished despite a considerable reduction in the total number of Government employees.

Gross sales of savings bonds of all series during the fiscal year 1950 amounted to \$5,673 million. Details of these sales, as well as of redemptions and amounts outstanding, will be found on pages 22 and

23 and 558 through 568.

In accord with the Treasury Department's management program,

a Committee on Materials was organized in the Savings Bonds Division to analyze all requests for the printing and reproduction of promotional materials and to approve only those requests which meet essential requirements. In addition to the immediate economies effected in this program, plans are under way to transfer all excess stocks of promotional materials from the field offices to the warehouse of the Chicago Mailing Division for redistribution. Savings of materials as well as the freeing of space for essential needs will result.

There was developed a better correlation of distribution and requirements of mats, plates, and engraved blocks to newspapers and magazines which contribute advertising space. This close control resulted in substantial savings in procurement costs, with no loss in the amount of contributed advertising space.

Final plans were formulated for the establishment of an inventory control system whereby property in the field and departmental offices will be more readily identifiable for management purposes. This system is currently being installed and should be in full operation by the end of the calendar year 1950.

UNITED STATES SECRET SERVICE

The Secret Service protects the President of the United States and members of his family, the President-elect, the Treasury Building and other buildings housing Treasury Department activities, and the currency and other obligations and securities of the United States in production, storage, and transit. The Secret Service is also charged with the suppression of counterfeiting, forging, or alteration of obligations and securities of the United States and foreign countries, and of counterfeiting of foreign and domestic coins. The Secret Service investigates forged endorsements on, or the fraudulent negotiation of, United States Treasury checks and bonds; losses of valuables in shipments by Government agencies; violations of the Gold Reserve Act; and other offenses as specified in 18 U.S. C. 3056.

Management improvement by the Secret Service during 1950 was concentrated mainly on more effective suppression of counterfeiting

and on a reorganization of the Field Force.

With counterfeiting more prevalent than at any time since 1935, the Secret Service took a number of steps toward its more effective suppression. The Service established extensive, centralized files on all counterfeiting offenders and suspects, in order to coordinate the investigations by field offices; participated in the "Counterfeit Clinics" sponsored by several of the Federal Reserve Banks, and distributed several thousand post card-size warnings of counterfeit notes in circulation and new framed exhibits of genuine and counterfeit bills for the information of banks, merchants, civic organizations, business groups, etc.; participated in the Third International Conference of the Central Offices for the Suppression of Counterfeiting at The Hague in an effort to stamp out the foreign counterfeiting of United States money; and drafted legislation to strengthen the currency laws. This legislation was introduced in both Houses of Congress and is awaiting action.

During the year plans were made for a reorganization of the Field Force of the Secret Service. The 56 field offices, instead of being under the control of 14 supervising agents, will be independent units, each under a special agent in charge, who will report directly to the Chief of the United States Secret Service. Four regional inspectors, acting under the Chief's delegated authority and with headquarters in the Chief's office, will make regular systematic inspections of the field offices in their respective regions, so that there will be direct and continuing liaison between the Chief and the special agent in charge of each field office. Under this system, reports and correspondence will be sent direct to the Chief; and appraisals of personnel and field administration will be of assistance in the utilization of available manpower in the most efficient manner.

Other management improvements included the installation of a standardized filing system in all Secret Service offices, and the preparation of a new manual prescribing the procedure for all Secret Service

personnel.

PROTECTIVE AND SECURITY ACTIVITIES

In connection with its protection of the President, the Secret Service also protected certain distinguished visitors to the United States, including the President of Chile, the Prime Minister of Pakistan, and the President of the Philippine Republic.

The Uniformed Force of the Secret Service safeguarded more than \$194 billion of currency, stamps, and other obligations in transit, and

\$801 billion of securities in production and storage.

ENFORCEMENT ACTIVITIES

Counterfeiting continued to increase during the year. The force of less than 200 Secret Service agents seized \$1,289,281 in counterfeit bills and coins, \$554,154 of which was captured before it could be passed on the public. Counterfeit bills and coins seized in 1949 totaled \$957.764.

There were 208 new counterfeit note issues during the year, 58 of which were of foreign origin. Agents captured 13 plants for the manufacture of 75 issues of notes, and arrested 542 persons who were charged with counterfeiting offenses. Arrests for counterfeiting exceeded

arrests made in 1949 by 161.8 percent.

Undercover agents, playing hazardous roles as racketeers, disrupted several well-organized counterfeiting gangs. After one agent negotiated to buy \$200,000 in counterfeit \$20 bills, the counterfeits were seized and five important distributors were arrested. All were sentenced to terms ranging from 10 to 25 years. Continuing the investigation, a special squad of agents apprehended seven more principals, including the printer and engraver who were responsible for manufacturing 34 issues of counterfeit \$10 and \$20 Federal Reserve notes representing \$800,000, and of counterfeit Canadian \$10 notes representing \$500,000. The notes were passed in 28 States, and 62 passers were taken into custody. The gang had also printed thousands of counterfeit Irish Sweepstakes tickets, 3-cent postage stamps, and

lottery tickets. Their counterfeiting technique had been learned from their extensive counterfeiting of OPA ration stamps during World War II.

In another case the Secret Service ended a 12-year-old manhunt with the arrest of a notorious "lone-wolf" counterfeiter in Chicago, where agents also seized his plant for the manufacture of counterfeit \$5 and \$10 notes. He was promptly sentenced to serve 15 years.

A young couple arrested in Amsterdam, N. Y., for passing counterfeit \$10 notes surrendered the equipment they had used to manufacture the counterfeits. Their notes had been passed in seven States.

The man, 18, and his wife, 17, are now awaiting trial.

In San Francisco agents arrested a perfectionist who had been striving for nine years to produce a perfect counterfeit bill. They captured an elaborate counterfeiting plant with 16 plates, 205 film negatives, and a quantity of completed counterfeit \$20 bills. The offender even manufactured his own currency paper, but never attempted to pass any of his counterfeits during his 9-year criminal venture. He pleaded guilty and was sentenced and fined.

Agents in New York arrested 16 persons for the manufacture of-6 million counterfeit 3-cent postage stamps and \$400,000 in counterfeit American Express travelers' checks. A perforating machine used in preparing the stamps was recovered by a Navy diving team from the ocean off Long Beach, N. Y., where it had been thrown by the

counterfeiters.

In New York and Miami four members of another counterfeiting gang were arrested by Secret Service agents and charged with the sale of counterfeit \$10 and \$20 notes to a representative of a Cuban smuggling ring. These arrests followed the apprehension of several Cubans in Havana and the seizure of \$20,000 in counterfeit notes. The four were convicted in New York and sentenced to terms ranging from 15 to 25 years each.

With agents diverted to counterfeiting cases, check and bond forgery cases continued to accumulate. Agents investigated 30,059 forged Government checks worth \$2,066,226 and 6,162 forged bonds, and arrested 2,336 persons charged with forgery. Convictions in forgery cases, including cases pending from prior years, totaled 2,080. As of June 30, 1950, there were 14,373 forged checks and 3,019 forged

bonds awaiting investigation.

In Michigan an alien, who had been in a Japanese concentration camp in Shanghai and who later entered the United States illegally, was arrested for stealing and forging nearly 200 checks, including 20 Government checks. After marrying an American woman he made

his living by stealing checks from the mails for more than a year. He pleaded guilty and was sentenced to six years.

Arrests for all offenses aggregated 3,168, and there were 2,667 convictions in cases of all types, representing 97.3 percent of convictions in the cases which went to trial. Prison sentences aggregated 3,245 years and additional sentences of 2,737 years were suspended or probated. Fines in criminal cases totaled \$30,592.70.

The following tables constitute a statistical summary of Secret Service activities for 1950:

Counterfeit money seized, fiscal years 1949 and 1950

	1949	1950	Increase, or decrease (-)	Percentage increase, or decrease (-)

PUBLIC DEBT OPERATIONS

TREASURY CERTIFICATES OF INDEBTEDNESS, TREASURY NOTES, AND TREASURY BONDS

Exhibit 1.—Offering of 11/8 percent certificates of Series G-1950 1

[Department Circular No. 849. Public Debt]

TREASURY DEPARTMENT, Washington, August 31, 1949.

I. Offering of Certificates

1. The Secretary of the Treasury, pursuant to the authority of the Second Liberty Bond Act, as amended, invites subscriptions, at par, from the people of the United States for certificates of indebtedness of the United States, designated 1½ percent Treasury certificates of indebtedness of Series G-1950, in exchange for 2 percent Treasury bonds of 1949-51, dated May 15, 1942, called for redemption on September 15, 1949.

II. DESCRIPTION OF CERTIFICATES

1. The certificates will be dated September 15, 1949, and will bear interest from that date at the rate of 1½ percent per annum, payable with the principal at maturity on September 15, 1950. They will not be subject to call for redemp-

tion prior to maturity.

2. The income derived from the certificates shall be subject to all taxes, now or hereafter imposed under the Internal Revenue Code, or laws amendatory or supplementary thereto. The certificates shall be subject to estate, inheritance, gift or other excise taxes, whether Federal or State, but shall be exempt from all taxation now or hereafter imposed on the principal or interest thereof by any State, or any of the possessions of the United States, or by any local taxing authority.

3. The certificates will be acceptable to secure deposits of public moneys.

They will not be acceptable in payment of taxes.

4. Bearer certificates will be issued in denominations of \$1,000, \$5,000, \$10,000, \$100,000 and \$1,000,000. The certificates will not be issued in registered form.

5. The certificates will be subject to the general regulations of the Treasury

Department, now or hereafter prescribed, governing United States certificates.

III. Subscription and Allotment

1. Subscriptions will be received at the Federal Reserve Banks and branches and at the Treasury Department, Washington. Banking institutions generally may submit subscriptions for account of customers, but only the Federal Reserve Banks and the Treasury Department are authorized to act as official agencies.

2. The Secretary of the Treasury reserves the right to reject any subscription, in whole or in part, to allot less than the amount of certificates applied for, and to close the books as to any or all subscriptions at any time without notice; and any action he may take in these respects shall be final. Subject to these reservations, all subscriptions will be allotted in full. Allotment notices will be sent out promptly upon allotment.

IV. PAYMENT

1. Payment at par for certificates allotted hereunder must be made on or before September 15, 1949, or on later allotment, and may be made only in Treasury bonds of 1949–51, called for redemption on September 15, 1949, which will be accepted at par, and should accompany the subscription. Payment of final interest due September 15 on bonds surrendered will be paid, in the case of coupon bonds, by payment of September 15, 1949, coupons, which should be detached by holders before presentation of the bonds, and in the case of registered bonds, by checks drawn in accordance with the assignments on the bonds surrendered.

¹ Details of Department Circular No. 847, dated June 20, 1949, covering the offering of certificates of Series F-1950, dated July 1, 1949, will be found in exhibit 2.

V. Assignment of Registered Bonds

1. Treasury bonds of 1949-51 in registered form tendered in payment for certificates offered hereunder should be assigned by the registered payees or assignees thereof to "The Secretary of the Treasury for exchange for Treasury certificates of indebtedness of Series G-1950 to be delivered to "", in accordance with the general regulations of the Treasury Department governing assignments for transfer or exchange, and thereafter should be presented and surrendered with the subscription to a Federal Reserve Bank or branch or to the Treasury Department, Division of Loans and Currency, Washington, D. C. The bonds must be delivered at the expense and risk of the holders.

VI. GENERAL PROVISIONS

1. As fiscal agents of the United States, Federal Reserve Banks are authorized and requested to receive subscriptions, to make allotments on the basis and up to the amounts indicated by the Secretary of the Treasury to the Federal Reserve Banks of the respective districts, to issue allotment notices, to receive payment for certificates allotted, to make delivery of certificates on full-paid subscriptions allotted, and they may issue interim receipts pending delivery of the definitive certificates.

2. The Secretary of the Treasury may at any time, or from time to time, prescribe supplemental or amendatory rules and regulations governing the offering, which will be communicated promptly to the Federal Reserve Banks.

JOHN W. SNYDER, Secretary of the Treasury.

Exhibit 2.—Details of certificate issues and allotments

Circulars pertaining to issues of Treasury certificates of indebtedness during the fiscal year 1950 are similar in form to the circular shown in exhibit 1, and therefore are not reproduced in this report. However, the essential details regarding each issue are summarized in the following table, and the final allotments of new certificates in exchange for maturing or called securities are shown in the succeeding table.

Summary of information contained in circulars pertaining to Treasury certificates of indebtedness issued during the fiscal year 1950

Date of circular	Num- ber of circu- lar	Certificates of indebtedness issued, and securities exchanged for new issues	Date of issue	Date of maturity	Date sub- scrip- tion books closed	Allotment payment date on or before (or on later allotment)

Exhibit 3.—Offering of 1% percent Treasury notes of Series A-1954

[Department Circular No. 854. Public Debt]

TREASURY DEPARTMENT, Washington, December 5, 1949.

I. Offering of Notes

1. The Secretary of the Treasury, pursuant to the authority of the Second Liberty Bond Act, as amended, invites subscriptions, at par, from the people of the United States for notes of the United States, designated 1% percent Treasury notes of Series A-1954, in payment of which any of the following listed Treasury securities, singly or in combinations aggregating \$1,000 or multiples thereof, may be tendered:

Treasury certificates of indebtedness:

11/4 percent certificates, Series H-1949, dated December 15, 1948, maturing December 15, 1949.

Treasury bonds:

2 percent bonds of 1949-51, dated July 15, 1942, due December 15, 1951,

called for redemption December 15, 1949, 3% percent bonds of 1949-52, dated December 15, 1934, due December 15, 1952, called for redemption December 15, 1949,

2½ percent bonds of 1949-53, dated December 15, 1936, due December 15, 1953, called for redemption December 15, 1949.

II. DESCRIPTION OF NOTES

1. The notes will be dated December 15, 1949, and will bear interest from that date at the rate of 1% percent per annum, payable on a semiannual basis on September 15, 1950, and thereafter on March 15 and September 15 in each year until the principal amount becomes payable. They will mature March 15, 1954,

and will not be subject to call for redemption prior to maturity.

2. The income derived from the notes shall be subject to all taxes, now or hereafter imposed under the Internal Revenue Code, or laws amendatory or supplementary thereto. The notes shall be subject to estate, inheritance, gift or other excise taxes, whether Federal or State, but shall be exempt from all taxation now or hereafter imposed on the principal or interest thereof by any State, or any of the possessions of the United States, or by any local taxing authority.

3. The notes will be acceptable to secure deposits of public moneys.

not be acceptable in payment of taxes.

4. Bearer notes with interest coupons attached will be issued in denominations of \$1,000, \$5,000, \$10,000, \$100,000 and \$1,000,000. The notes will not be issued in registered form.

The notes will be subject to the general regulations of the Treasury Depart-

ment, now or hereafter prescribed, governing United States notes.

III. Subscription and Allotment

1. Subscriptions will be received at the Federal Reserve Banks and branches and at the Treasury Department, Washington. Banking institutions generally may submit subscriptions for account of customers, but only the Federal Reserve Banks and the Treasury Department are authorized to act as official agencies.

2. The Secretary of the Treasury reserves the right to reject any subscription, in whole or in part, to allot less than the amount of notes applied for, and to close the books as to any or all subscriptions at any time without notice; and any action he may take in these respects shall be final. Subject to these reservations, all subscriptions will be allotted in full. Allotment notices will be sent out promptly upon allotment.

IV. PAYMENT

1. Payment at par for notes allotted hereunder must be made on or before December 15, 1949, or on later allotment, and may be made only in Treasury certificates of indebtedness of Series H-1949, maturing December 15, 1949, or in Treasury bonds of 1949-51, Treasury bonds of 1949-52 or Treasury bonds of 1949-53, all called for redemption December 15, 1949, which will be accepted at par, and should accompany the subscription. The full year's interest on the certificates surrendered will be paid to the subscriber following acceptance of the certificates. Final interest due December 15 on bonds surrendered will be paid, in the case of coupon bonds, by payment of December 15, 1949 coupons, which should be detached by holders before presentation of the bonds, and in the case of registered bonds, by checks drawn in accordance with the assignments on the bonds surrendered.

V. Assignment of Registered Bonds

1. Treasury bonds of 1949-51, Treasury bonds of 1949-52 or Treasury bonds of 1949-53 in registered form tendered in payment for notes offered hereunder should be assigned by the registered payees or assignees thereof to "The Secretary of the Treasury for exchange for Treasury notes of Series A-1954 to be delivered to ______, in accordance with the general regulations of the Treasury Department governing assignments for transfer or exchange, and thereafter should be presented and surrendered with the subscription to a Federal Reserve Bank or branch or to the Treasury Department, Division of Loans and Currency, Washington, D. C. The bonds must be delivered at the expense and risk of the holders.

VI. General Provisions

1. As fiscal agents of the United States, Federal Reserve Banks are authorized and requested to receive subscriptions, to make allotments on the basis and up to the amounts indicated by the Secretary of the Treasury to the Federal Reserve Banks of the respective districts, to issue allotment notices, to receive payment for notes allotted, to make delivery of notes on full-paid subscriptions allotted,

and they may issue interim receipts pending delivery of the definitive notes.

2. The Secretary of the Treasury may at any time, or from time to time, prescribe supplemental or amendatory rules and regulations governing the offering, which will be communicated promptly to the Federal Reserve Banks.

JOHN W. SNYDER. Secretary of the Treasury.

Exhibit 4.—Details of Treasury note issues and allotments

Circulars pertaining to issues of Treasury notes during the fiscal year 1950 are similar in form to the circular shown in exhibit 3, and therefore are not reproduced in this report. However, the essential details regarding each issue are summarized in the following table, and the final allotments of new notes in exchange for maturing or called securities are shown in the succeeding table.

Exhibit 5.—Call, August 12, 1949, for redemption on December 15, 1949, of three issues of Treasury bonds (press release August 12, 1949)

The Secretary of the Treasury announced today that the bonds of three outstanding issues which may be redeemed at the option of the United States on December 15, 1949, are called for redemption on that date. These issues are the 2 percent Treasury bonds of 1949–51, dated July 15, 1942, due December 15, 1951; 3½ percent Treasury bonds of 1949–52, dated December 15, 1934, due December 15, 1952; and 2½ percent Treasury bonds of 1949–53, dated December 15, 1936, due December 15, 1953. There are now outstanding \$2,097,615,100 of the 2 percent bonds, \$491,375,100 of the 3½ percent bonds, and \$1,786,110,450 of the 2½ percent bonds.

The texts of the formal notices of call are as follows:

TWO PERCENT TREASURY BONDS OF 1949-51 (DATED JULY 15, 1942)

To Holders of 2 Percent Treasury, Bonds of 1949-51 (Dated July 15, 1942), and Others Concerned:

1. Public notice is hereby given that all outstanding 2 percent Treasury bonds of 1949-51, dated July 15, 1942, due December 15, 1951, are hereby called for redemption on December 15, 1949, on which date interest on such bonds will cease.

2. Holders of these bonds may, in advance of the redemption date, be offered the privilege of exchanging all or any part of their called bonds for other interest-bearing obligations of the United States, in which event public notice will hereafter be given and an official circular governing the exchange offering will be issued.

3. Full information regarding the presentation and surrender of the bonds for cash redemption under this call will be found in Department Circular No. 666, dated July 21, 1941.

JOHN W. SNYDER, Secretary of the Treasury.

THREE AND ONE-EIGHTH PERCENT TREASURY BONDS OF 1949-52 (DATED DECEMBER 15, 1934)

To Holders of 3½ Percent Treasury Bonds of 1949-52 (Dated December 15, 1934), and Others Concerned:

1. Public notice is hereby given that all outstanding 3½ percent Treasury bonds of 1949-52, dated December 15, 1934, due December 15, 1952, are hereby called for redemption on December 15, 1949, on which date interest on such bonds will cease.

2. Holders of these bonds may, in advance of the redemption date, be offered the privilege of exchanging all or any part of their called bonds for other interest-bearing obligations of the United States, in which event public notice will hereafter be given and an official circular governing the exchange offering will be issued

3. Full information regarding the presentation and surrender of the bonds, for cash redemption under this call will be found in Department Circular No. 666, dated July 21, 1941.

JOHN W. SNYDER, Secretary of the Treasury.

TWO AND ONE-HALF PERCENT TREASURY BONDS OF 1949-53 (DATED DECEMBER 15, 1936)

- To Holders of 21/2 Percent Treasury Bonds of 1949-53 (Dated December 15, 1936), and Others Concerned:
- 1. Public notice is hereby given that all outstanding 2½ percent Treasury bonds of 1949-53, dated December 15, 1936, due December 15, 1953, are hereby called for redemption on December 15, 1949, on which date interest on such bonds will cease.
- 2. Holders of these bonds may, in advance of the redemption date, be offered the privilege of exchanging all or any part of their called bonds for other interest-bearing obligations of the United States, in which event public notice will hereafter be given and an official circular governing the exchange offering will be

3. Full information regarding the presentation and surrender of the bonds for cash redemption under this call will be found in Department Circular No. 666, dated July 21, 1941.

JOHN W. SNYDER, Secretary of the Treasury.

Exhibit 6.—Call, November 14, 1949, for redemption on March 15, 1950, of 2 percent Treasury bonds of 1950-52, dated October 19, 1942 (press release November 14, 1949)

The Secretary of the Treasury announced today that all outstanding 2 percent Treasury bonds of 1950-52, dated October 19, 1942, due March 15, 1952, are called for redemption on March 15, 1950. There are now outstanding \$1,962,-687,300 of these bonds.

The text of the formal notice of call is as follows:

- To Holders of 2 Percent Treasury Bonds of 1950-52 (Dated October 19, 1942), and Others Concerned:
- 1. Public notice is hereby given that all outstanding 2 percent Treasury bonds of 1950-52, dated October 19, 1942, due March 15, 1952, are hereby called for redemption on March 15, 1950, on which date interest on such bonds will cease.

2. Holders of these bonds may, in advance of the redemption date, be offered the privilege of exchanging all or any part of their called bonds for other interest-bearing obligations of the United States, in which event public notice will hereafter be given and an official circular governing the exchange offering will be

3. Full information regarding the presentation and surrender of the bonds for cash redemption under this call will be found in Department Circular No. 666, dated July 21, 1941.

> JOHN W. SNYDER, Secretary of the Treasury.

TREASURY BILLS

Exhibit 7.—Inviting tenders for Treasury bills dated July 7, 1949 (press release June 28, 1949)

The Secretary of the Treasury, by this public notice, invites tenders for \$900,000,000, or thereabouts, of 91-day Treasury bills, for cash and in exchange for Treasury bills maturing July 7, 1949, to be issued on a discount basis under competitive and noncompetitive bidding as hereinafter provided. The bills of this series will be dated July 7, 1949, and will mature October 6, 1949, when the

face amount will be payable without interest. They will be issued in bearer form only, and in denominations of \$1,000, \$5,000, \$10,000, \$100,000, \$500,000, and \$1,000,000 (maturity value).

Tenders will be received at Federal Reserve Banks and branches up to the

closing hour, two o'clock p. m., Eastern Daylight Saving time, Friday, July 1, 1949. Tenders will not be received at the Treasury Department, Washington. Each tender must be for an even multiple of \$1,000, and in the case of competitive tenders the price offered must be expressed on the basis of 100, with not more than three decimals, e. g., 99.925. Fractions may not be used. It is urged that tenders be made on the printed forms and forwarded in the special envelopes which will be supplied by Federal Reserve Banks or branches on application therefor.

Tenders will be received without deposit from incorporated banks and trust companies and from responsible and recognized dealers in investment securities. Tenders from others must be accompanied by payment of 2 percent of the face amount of Treasury bills applied for, unless the tenders are accompanied by an

express guaranty of payment by an incorporated bank or trust company.

Immediately after the closing hour, tenders will be opened at the Federal Reserve Banks and branches, following which public announcement will be made by the Secretary of the Treasury of the amount and price range of accepted bids. Those submitting tenders will be advised of the acceptance or rejection thereof. The Secretary of the Treasury expressly reserves the right to accept or reject any or all tenders, in whole or in part, and his action in any such respect shall be Subject to these reservations, noncompetitive tenders for \$200,000 or less without stated price from any one bidder will be accepted in full at the average price (in three decimals) of accepted competitive bids. Settlement for accepted tenders in accordance with the bids must be made or completed at the Federal Reserve Bank on July 7, 1949, in cash or other immediately available funds or in a like face amount of Treasury bills maturing July 7, 1949. Cash and exchange tenders will receive equal treatment. Cash adjustments will be made for differences between the par value of maturing bills accepted in exchange and the issue price of the new bills.

The income derived from Treasury bills, whether interest or gain from the sale or other disposition of the bills, shall not have any exemption, as such, and loss from the sale or other disposition of Treasury bills shall not have any special treatment, as such, under the Internal Revenue Code, or laws amendatory or The bills shall be subject to estate, inheritance, gift or supplementary thereto. other excise taxes, whether Federal or State, but shall be exempt from all taxation now or hereafter imposed on the principal or interest thereof by any State, or any of the possessions of the United States, or by any local taxing authority. For purposes of taxation the amount of discount at which Treasury bills are originally sold by the United States shall be considered to be interest. Under sections 42 and 117 (a) (1) of the Internal Revenue Code, as amended by section 115 of the Revenue Act of 1941, the amount of discount at which bills issued hereunder are sold shall not be considered to accrue until such bills shall be sold, redeemed or otherwise disposed of, and such bills are excluded from consideration as capital assets. Accordingly, the owner of Treasury bills (other than life insurance companies) issued hereunder need include in his income tax return only the difference between the price paid for such bills, whether on original issue or on subsequent purchase, and the amount actually received either upon sale or redemption at maturity during the taxable year for which the return is made, as ordinary gain or loss.

Treasury Department Circular No. 418, as amended, and this notice, prescribe the terms of the Treasury bills and govern the conditions of their issue. of the circular may be obtained from any Federal Reserve Bank or branch.

Exhibit 8.—Acceptance of tenders for Treasury bills dated July 7, 1949 (press release July 2, 1949)

The Secretary of the Treasury announced last evening that the tenders for \$900,000,000, or thereabouts, of 91-day Treasury bills to be dated July 7 and to mature October 6, 1949, which were offered on June 28, were opened at the Federal Reserve Banks on July 1.

The details of this issue are as follows:

Total applied for $_{-}$ \$1,696,622,000.

Total accepted____ \$900,537,000 (includes \$56,520,000 entered on a noncompetitive basis and accepted in full at the average price shown below).

99.734 + .Equivalent rate of discount approximately Average price____ 1.052% per annum.

Range of accepted competitive bids:

99.740. Equivalent rate of discount approximately

1.029% per annum. .732. Equivalent rate of discount approximately 99.732. 1.060% per annum.
(78 percent of the amount bid for at the low price was accepted.)

Note.—Amount of matured issues will be found in table 22.

¹ Press release inviting tenders for Treasury bill issue is dated 6 days before date of issue. Press release announcing acceptance of tenders is dated 2 days before date of issue. Closing date on which tenders for issue are accepted is 3 days before date of issue.

³ Figures, at maturity value, are final and differ in most cases from those shown in Digitized for Foress releases announcing details of particular issue.

1 Noncompetitive tenders for \$200,000 or less without stated price from any one http://fraser.stbidder.weer.gccepted in full at average price of accepted competitive bids.

⁴ Bank discount basis.
5 Except \$1,075,000 at 99.775.
6 Except \$100,000 at 99.770 and \$300,000 at 99.764.
7 Except \$700,000 at 99.766.
8 Except \$200,000 at 99.750.
5 Except \$100,000 at 99.750.

Exhibit 10.—Fifth amendment, July 25, 1950, to Department Circular No. 418, relating to the issue and sale of Treasury bills

TREASURY DEPARTMENT, Washington, July 25, 1950.

Paragraph 8 of Department Circular No. 418, as amended, dated February 28, 1941, is hereby amended to read as follows (31 CRF 309):
"Sec. 309.8. Tenders should be submitted on the printed forms and forwarded

Reserve Bank, or branch. If a special envelope is not available, the inscription 'Tender for Treasury Bills' should be placed on the envelope used. The instructions of the Federal Reserve Banks with respect to the submission of tenders should be observed. Others than banking institutions will not be permitted to submit tenders except for their own account. Tenders from incorporated banks and trust companies, and from responsible and recognized dealers in investment securities will be received without deposit. Tenders from all others must be accompanied by a payment of such percent of the face amount of the Treasury bills applied for as the Secretary of the Treasury may from time to time prescribe; Provided, however, That such deposit will not be required if the tender is accompanied by an express guaranty of payment in full by an incorporated bank or trust company. Forfeiture of the prescribed payment may be declared by the Secretary of the Treasury, if payment is not completed, in the case of accepted tenders, on the prescribed date."

JOHN W. SNYDER. Secretary of the Treasury.

TREASURY SAVINGS NOTES, DEPOSITARY BONDS, AND UNITED STATES SAVINGS BONDS

Exhibit 11.—First amendment, August 11, 1949, to Department Circular No. 833, relating to payment of accrued interest in purchasing Treasury savings notes of Series D

> TREASURY DEPARTMENT. Washington, August 11, 1949.

PAYMENT OF ACCRUED INTEREST IN PURCHASING NOTES

1. The first paragraph of section I is amended to read as follows:
"1. Offering of notes.—The Secretary of the Treasury, pursuant to the authority of the Second Liberty Bond Act, as amended, offers for sale to the people of the United States, at par and accrued interest from the first day of the month in which purchased to the day, inclusive, on which full payment is made in cash or other immediately available funds, an issue of notes of the United States, designated Treasury savings notes, Series D, which notes, if inscribed in the name of a Federal taxpayer, will be receivable as hereinafter provided at par and accrued interest in payment of income, estate and gift taxes imposed by the Internal Revenue Code, or laws amendatory or supplementary thereto."

2. The first paragraph of section II is amended to read as follows:

"1. General.—Treasury savings notes, Series D, will in each instance be dated as of the first day of the month in which payment, at par and accrued interest, if any, is received and credited by an agent authorized to issue the notes. They will mature three years from that date, and may not be called by the Secretary of the Treasury for redemption before maturity. All notes issued during any one calendar year shall constitute a separate series indicated by the letter 'D' followed by year of maturity. At the time of issue the authorized issuing agent will inscribe on the face of each note the name and address of the owner, will enter the date as of which the note is issued and will imprint his dating stamp (with current date). The notes will be issued in denominations of \$100, \$500, \$1,000, \$5,000, \$10,000, \$100,000, \$500,000 and \$1,000,000. Exchange of authorized denominations from higher to lower, but not from lower to higher, may be arranged at the office of the agent that issued the note."

3. The second paragraph of section III is amended to read as follows:

"2. Applications and payment.—Applications will be received by the Federal Reserve Banks and branches, and by the Treasurer of the United States, Wash-

ington, D. C. Banking institutions and security dealers generally may submit applications for account of customers, but only the Federal Reserve Banks and their branches and the Treasury Department are authorized to act as official agencies. The use of an official application form is desirable but not necessary. Appropriate forms may be obtained on application to any Federal Reserve Bank or branch, or the Treasurer of the United States, Washington, D. C. Every application must be accompanied by payment in full, at par and accrued interest, if any. The amount of accrued interest payable by the purchaser will be computed at the rate at which interest accrues on the notes (\$0.80 per month per \$1,000 par amount) for the actual number of days in the month in which the purchase is made. One day's accrued interest in a 31-day month is \$0.02581 per \$1,000, in a 30-day month \$0.02667, in a 29-day month \$0.02759 and in a 28-day month \$0.02857. Any form of exchange, including personal checks, will be accepted subject to collection, and should be drawn to the order of the Federal Reserve Bank or of the Treasurer of the United States, as payee, as the case may be. The date funds are made available on collection of exchange will govern the issue date of the notes. Any depositary, qualified pursuant to the provisions of Treasury Department Circular No. 92, Revised, as amended, will be permitted to make payment by credit for notes applied for on behalf of itself or its customers up to any amount for which it shall be qualified in excess of existing deposits."

> JOHN W. SNYDER, Secretary of the Treasury.

Exhibit 12.—First amendment, November 10, 1949, to the First Supplement to Department Circular No. 660, terminating the issue of 2 percent depositary bonds. Second Series

TREASURY DEPARTMENT, Washington, November 10, 1949.

The issue of 2 percent depositary bonds, Second Series, under the First Supplement, dated June 29, 1943, to Department Circular No. 660, is hereby ter-

minated as of the close of business January 1, 1950.

All 2 percent depositary bonds, Second Series, outstanding on February 28, 1950, will be redeemed as of the close of business on that date. Notice of redemption will be given to the holders of such bonds as provided by the terms thereof.

JOHN W. SNYDER. Secretary of the Treasury.

Exhibit 13.—Sixth amendment, January 4, 1950, to Department Circular No. 530, Sixth Revision, prescribing regulations governing United States savings bonds

> TREASURY DEPARTMENT, Washington, January 4, 1950.

To Owners of United States Savings Bonds and Others Concerned:
Pursuant to section 22 (a) of the Second Liberty Bond Act, as amended (55 Stat. 7, 31 U. S. C. 757c), section 315.9 (d) (4) and section 315.23 (c) of Department Circular No. 530, Sixth Revision, dated February 13, 1945 (31 CFR 1945) Supp. 315), as amended, are further amended, effective January 1, 1950, to read as follows:

"Sec. 315.9 (d) (4). With respect to bonds of Series E, those purchased with the proceeds of matured bonds of Series A, Series C-1938, Series D-1939 and Series D-1940, where such matured bonds are presented by an individual (natural person in his own right) owner or coowner for that purpose and the Series E bonds are registered in his name in any form of registration authorized for that

"Sec. 315.23 (c). Series G—Redemption at par before maturity.—A bond of Series G (but not of Series F) will be redeemed at par before maturity, in whole or in part, in amounts corresponding with authorized denominations, not less than six months from the issue date, (1) upon the death on or after January 1, 1950, of an owner or coowner, if a natural person, or (2) in the case of bonds held by a trustee or other fiduciary estate upon the termination of the trust or other fiduciary estate by reason of the death on or after January 1, 1950, of any person, except that if the trust or fiduciary estate is terminated only in part, redemption at par will be made to the extent of not more than the pro rata portion of the trust or fiduciary estate so terminated. Redemption at par will be made at the

option of the person entitled to the bonds and such option may be shown by a signed request for payment or by express written notice (in either case specifying that redemption at par is desired); payment will be made as of the first day of the first month following by at least one full calendar month the date of receipt of the bonds or the request by the Treasury Department, Division of Loans and Currency, Merchandise Mart, Chicago 54, Illinois, or a Federal Reserve Bank. If desired and so stated in the request for payment or notice of intention, payment may be postponed to the second interest date following the date of death; otherwise, payment will be made in regular course. A death certificate or other competent proof of death must accompany the bonds or the notice and if separate notice is given the bonds must be surrendered to the same agency to which the notice is given, not less than twenty days before the effective redemption date. In no case of redemption at par before maturity will interest be paid beyond the second interest payment date following the date of death. In cases in which the death of the owner, coowner, or person whose death terminated a fiduciary estate, took place before January 1, 1950, redemption at par will be governed by the regulations in force at the date of death."

JOHN W. SNYDER, Secretary of the Treasury.

Exhibit 14.—Fourth supplement, March 15, 1950, to Department Circular No. 653, Second Revision, discontinuing sales of the \$10 denomination of Series E savings bonds

TREASURY DEPARTMENT, Washington, March 15, 1950.

The first supplement to Department Circular No. 653, Second Revision, which supplement is dated June 7, 1944 (31 C. F. R. 316.12), is hereby withdrawn effective at the close of business March 31, 1950, and thereafter no sales of United States savings bonds of Series E of the denomination of \$10 will be made.

E. H. Foley, Jr., Acting Secretary of the Treasury.

OBLIGATIONS GUARANTEED BY THE UNITED STATES

Exhibit 15.—Partial redemption, before maturity, of 23/4 percent housing insurance fund debentures, Series D (sixth call)

[Department Circular No. 851. Public Debt]

TREASURY DEPARTMENT, Washington, September 27, 1949.

To Holders of 23/4 Percent Housing Insurance Fund Debentures, Series D:

I. NOTICE OF SIXTH CALL FOR PARTIAL REDEMPTION, BEFORE MATURITY, OF 2%
PERCENT HOUSING INSURANCE FUND DEBENTURES, SERIES D

The Federal Housing Commissioner, with the approval of the Secretary of the Treasury, has issued the following notice of call for partial redemption and offer to purchase with respect to 2¾ percent housing insurance fund debentures, Series D:

"Pursuant to the authority conferred by the National Housing Act (48 Stat. 1246; U. S. C., title 12, sec. 1701 et seq.) as amended, public notice is hereby given that 2¾ percent housing insurance fund debentures, Series D, of the denominations and serial numbers designated below, are hereby called for redemption, at par and accrued interest, on January 1, 1950, on which date interest on such debentures shall cease:

23/4 percent housing insurance fund debentures, Series D

Denomination:	Serial numbers (all numbers inclusive)		
\$50	6 to 7		
\$100			
\$500			
\$1,000	28 to 29		
\$5,000	7		
\$10,000	1,065 to 1,113		

"The debentures first issued as determined by the serial numbers were selected for redemption by the Commissioner, Federal Housing Administration, with the

approval of the Secretary of the Treasury.
"No transfers or denominational exchanges in debentures covered by the foregoing call will be made on the books maintained by the Treasury Department on or after October 1, 1949. This does not affect the right of the holder of a debenture to sell and assign the debenture on or after October 1, 1949, and provision will be made for the payment of final interest due on January 1, 1950, with the principal thereof to the actual owner, as shown by the assignments

"The Commissioner of the Federal Housing Administration hereby offers to purchase any debentures included in this call at any time from October 1, 1949, to December 31, 1949, inclusive, at par and accrued interest, to date of purchase.

"Instructions for the presentation and surrender of debentures for redemption on or after January 1, 1950, or for purchase prior to that date will be given by the Secretary of the Treasury."

II. TRANSACTIONS IN SIXTH-CALLED DEBENTURES

1. The debentures included in the foregoing notice of call for partial redemption on January 1, 1950, are hereby designated sixth-called 2¾ percent housing insurance fund debentures, Series D, and are hereinafter referred to as sixth-called

2. Transfers and denominational exchanges in sixth-called debentures will

terminate at the close of business on September 30, 1949.

III. REDEMPTION OR PURCHASE

1. Holders of sixth-called debentures will be entitled to have such debentures redeemed and paid at par on January 1, 1950, with interest in full to that date, at the rate of \$13.75 per \$1,000. Interest on sixth-called debentures will cease on January 1, 1950.

2. Holders of sixth-called debentures have the privilege of presenting such debentures at any time from October 1 to December 31, 1949, inclusive, for purchase at par and accrued interest, at the rate of \$0.074728 per \$1,000 per day from July 1, 1949, to date of purchase.

IV. Rules and Regulations Governing Redemption and Purchase

1. The United States Treasury Department is the agent of the Federal Housing Commissioner for the redemption and purchase of sixth-called debentures. accordance with regulations adopted by the Federal Housing Commissioner and approved by the Secretary of the Treasury, the assignment, redemption, and purchase of sixth-called debentures will be governed by the general regulations of the Treasury Department with respect to United States bonds and notes, so

far as applicable, except as otherwise provided herein.

2. Sixth-called debentures presented for redemption on January 1, 1950, or for purchase from October 1 to December 31, 1949, inclusive, must be assigned by the registered payee or assignee thereof or by their duly constituted repreby the registered payee or assignee thereof or by their duty constituted representatives in the form indicated in paragraph 3 of this section, and should thereafter be presented and surrendered to any Federal Reserve Bank or to the Division of Loans and Currency, Treasury Department, Washington 25, D. C., accompanied by appropriate written advice. (Use Form PD 2218.) The debentures must be delivered at the expense and risk of the holders. (See paragraph 8 of this section.) In all cases checks in payment of principal and final interest will be mailed to the address given in the form of advice accompany-

ing the debentures when surrendered.
3. If the registered payee or an assignee holding under proper assignment from the registered payee desires that payment be made to him, the debentures should be assigned by such payee or assignee or by a duly constituted representative to "The Federal Housing Commissioner for redemption" or to "The Federal Housing Commissioner for purchase," according to whether the debentures are to be presented for redemption on January 1, 1950, or for purchase prior to that date. If it is desired for any reason that payment be made to some other person without intermediate assignment, the debentures should be assigned to "The Federal Housing Commissioner for redemption (or purchase) for the account of _____," inserting the name and address of the person to whom payment is to be made.

4. An assignment in blank or other assignment having similar effect will be recognized, but in that event payment will be made to the person surrendering the debenture for redemption or purchase since, under such an assignment, the debenture becomes in effect payable to bearer. Assignments in blank or assignments having similar effect should be avoided, if possible, in order not to lose the protection afforded by registration.

5. Final interest on any sixth-called debentures, whether purchased prior to or redeemed on or after January 1, 1950, will be paid with the principal in accord-

ance with the assignments on the debentures surrendered.

6. All assignments must be made on the debentures themselves unless otherwise directed by the Treasury Department. Detached assignments will be recognized and accepted in any particular case in which the use of detached assignments is specifically authorized by the Treasury Department. Any assignment

not made upon the debenture is considered a detached assignment.

7. A sixth-called debenture registered in the name of, or assigned to, a corporation, will be paid to such corporation on or after January 1, 1950, upon an appropriate assignment for that purpose executed on behalf of the corporation by a duly authorized officer thereof. An assignment so executed and duly attested in accordance with Treasury Department regulations will ordinarily be accepted without proof of the officer's authority. In all cases coming under this provision payment will be made only by check drawn to the order of the corporation. Proof of the authority of the officer assigning on behalf of a corporation will be required, in accordance with the general regulations of the Treasury Department, in the case of assignments for purchase prior to January 1, 1950, and in case of assignments for redemption on or after January 1, 1950, for the account of any person other than the corporation.

8. Debentures presented for redemption or purchase under this circular must be delivered to a Federal Reserve Bank or to the Division of Loans and Currency, Treasury Department, Washington 25, D. C., at the expense and risk of the holder. Debentures bearing restricted assignments may be forwarded by registered mail, but debentures bearing unrestricted assignments should be forwarded

by registered mail insured or by express prepaid.

9. In order to facilitate the redemption of sixth-called debentures on January 1, 1950, any such debenture may be presented and surrendered in the manner herein prescribed in advance of that date but not before December 1, 1949. Such early presentation by holders will insure prompt payment of principal and interest when due.

V. General Provisions

1. Any further information which may be desired regarding the redemption of sixth-called debentures under this circular may be obtained from any Federal Reserve Bank or from the Division of Loans and Currency, Treasury Department, Washington 25, D. C., where copies of the Treasury Department's regulations governing assignments may be obtained.

2. As fiscal agents of the United States, Federal Reserve Banks are authorized

and requested to perform any necessary acts under this circular. The Secretary of the Treasury may at any time or from time to time prescribe supplemental and amendatory rules and regulations governing the matters covered by this circular, which will be communicated promptly to the registered owners of sixth-

called debentures.

JOHN W. SNYDER, Secretary of the Treasury.

Exhibit 16.—Summary of information contained in circulars pertaining to calls for partial redemption, before maturity, of insurance fund debentures

During the fiscal year 1950 there were five calls for partial redemption, before maturity, of insurance fund debentures. The essential details contained in the circulars covering these calls are summarized in the following table. The first circular, covering the sixth call for partial redemption of Series D housing insurance fund debentures, is shown as exhibit 15. The other four circulars have been consisted but the great sules and exhibit 15. omitted, but the general rules and regulations contained in the omitted circulars are, with the exception of the applicable dates, the same as those shown in exhibit 15.

PUBLIC DEBT MANAGEMENT

Exhibit 17.—Statement by Secretary of the Treasury Snyder before the Subcommittee on Monetary, Credit, and Fiscal Policies of the Joint Committee on the Economic Report, December 2, 1949

Mr. Chairman and Members of the Subcommittee of the Joint Committee on the Economic Report: I am pleased to have the opportunity of appearing before you today to discuss questions on the monetary, credit, and fiscal policies of the United States Government. I should like at this time to take a few minutes to talk about some of the current factors in the outlook for Treasury financing and debt management policies in the light of the budget estimates that have been released since I sent my answers to your questionnaire to the Committee. In discussing some of the figures, I shall refer occasionally to a booklet of charts which we have prepared.

The budget position is a matter of first importance. The new budget estimates show a deficit of \$5.5 billion for the present fiscal year. Expenditures are estimated at \$43.5 billion and receipts at \$38 billion, as is shown in chart A in the book-It seems to me, however, that in times as prosperous as these we should have a balanced budget. National income today is close to the highest level in our history; and, by every standard of sound government finance, the time to have a

balanced budget is now.

This is the position I have taken consistently since I became Secretary of the Treasury in June 1946. In the statement which I made at that time, I said:

It is the responsibility of the Government to reduce its expenditures in every possible way, to maintain adequate tax rates during this transition period,

and to achieve a balanced budget—or better—for 1947."

It was, therefore, a source of great satisfaction to me to be able—as Secretary of the Treasury—to announce at the end of the fiscal year 1947 that the Federal Government had operated with a budget surplus. In the following fiscal year, which ended on June 30, 1948, we again had a budget surplus—it amounted to \$8.4 billion and was, in fact, the largest budget surplus in the history of the United States Government.

In the past three years, I have restated the urgent need for an excess of receipts over expenditures on many occasions—notably when the Congress was considering

tax reduction measures in 1947 and 1948.

Furthermore, President Truman has repeatedly urged the necessity of reducing the public debt under the circumstances which have existed since the end of the war. In his message to the Congress on April 2, 1948, in which he returned, without approval, the tax reduction bill, H. R. 4790, he stated:

"* * I repeat what I have so often said before—if we do not reduce the

public debt by substantial amounts during a prosperous period such as the present,

there is little prospect that it will ever be materially reduced."

You will recall that it was this tax reduction measure which the Congress passed over the President's veto, and which resulted in a loss of revenues to the Federal Government amounting to approximately \$5 billion annually. It is largely as a result of the enactment of this legislation that we had a budget deficit of \$1.8 billion in the fiscal year which ended last June 30, and that we have a prospective budget deficit of \$5.5 billion in the current fiscal year.

About \$3 billion of the deficit for the fiscal year 1950 has already occurred. It has been financed principally by increases in the weekly Treasury bill offerings and by increased sales of Treasury savings notes. The total amount of Treasury bills outstanding rose approximately \$800 million between August 4 and September 8, as a result of six successive offerings in excess of the amounts maturing. The amount of Treasury savings notes outstanding has increased by over \$2\;\)2 billion

since the end of June.

The Treasury cash balance is currently running between \$4 billion and \$5 billion. Without any further new financing, the balance should remain near this level for the next four months, as shown in chart B. If everything works out exactly as calculated in present estimates, the balance would run down to approximately

\$3 billion by next April 30.

There are always, however, a number of variables which could have an important influence on the picture. There is the possibility that revenues might vary from the amount shown in the budget estimates. We knew, for example, at the time the revenue estimates were made, that it was very difficult to gauge the full effect of strikes on incomes and corporate profits. It still is not possible to do so. There

907795-51-12

is bound to be considerable range in expenditure estimates for such programs as farm price supports, RFC mortgage purchases, and various types of payments to veterans. These considerations are important in our estimate of cash balance levels.

The picture of how the various Government operations affect the cash balance is one that I have before me daily as I consider debt management decisions and policies. We revise our appraisals constantly as new information comes in. It looks at this time as though we will have to do some additional new-money

financing later in this fiscal year.

There are three main sources which we might tap for new borrowing. These are nonbank institutional investors, such as insurance companies, mutual savings banks, and savings and loan associations; other private nonbank investors, including individuals and pension funds; and the commercial banks of the country. We keep close watch at all times on the position of the various investor classes

which comprise the market for Government securities.

In addition to the problem of new borrowing, the Treasury will find itself faced next year—as it has been in each of the postwar years—with a large refunding task. Approximately \$1 billion of Treasury bills mature each week; there will be a number of issues of certificates of indebtedness and notes maturing, totaling about \$33 billion; and there will be four Treasury bonds amounting to about \$11 billion which mature or are callable next year. This is shown in chart C. The budget deficit makes it clear that there will not be any reduction during the fiscal year 1950 on these maturities, except for tail-ends of maturing securities not turned in for refunding. There will not be any official budget estimates for the fiscal year 1951, of course, until the President's Budget Message is released in January. The total of maturing or callable marketable securities in the calendar year 1950 is approximately \$56 billion; and, on net balance, it appears that nearly the entire amount will be refunded into securities maturing in the future.

Two-thirds of the securities which mature in 1950 are held by the commercial banking system. A significant portion of the remainder is held by industrial, commercial, and mercantile corporations. The ownership of maturing issues, as well as the ownership of the remainder of the public debt, is, of course, one of the considerations which we must take into account in making our debt manage-

ment decisions.

The debt is broadly distributed, and we want to keep it that way. The present widespread ownership is, to a large extent, the result of the Treasury's policy of fitting its security offerings to the needs of various investor classes. This first became of special importance during the war period when one of the major objectives was to sell as great a portion as possible of the large wartime offerings to nonbank investors. It has had increasing importance in the postwar period, when we wished to maintain a large nonbank holding of Government securities, especially among individuals, under varying circumstances of business recon-

version and then expansion.

A central consideration in fitting Government securities to the needs of different classes of investors has been setting the appropriate maturities for each class. Industrial, commercial, and mercantile corporations, for example, have been sold short-term securities primarily, since their purchases are generally made with reserves which they may want to have readily convertible. The same type of consideration was kept in mind in fitting Government security offerings to the needs of other classes of investors. The net results of this policy can be observed by an analysis of the portfolios of the leading investor classes. Information on this account appears in chart D which shows changes in the estimated average number of years to maturity of the Government security portfolios of three important investor groups—life insurance companies, mutual savings banks, and commercial banks.

Life insurance companies and mutual savings banks are, of course, generally longer-term investors. During the war, insurance companies acquired a large volume of Governments; and it was the Treasury's policy to sell them longer-term securities. The results are evident. The average length of Government securities held by life insurance companies increased from about 10 years in 1941 to about 16 years in 1945. Since then, there has been a gradual decline; and, at the present time, the figure is 14 years.

The picture with respect to mutual savings banks differs somewhat from that of the life insurance companies. The average length of the Government security holdings of these banks increased during the war finance period from 9 years to 14 years; and has declined subsequently to 12 years. Savings banks also were

sold longer-term securities, but their investment needs resulted in the acquisition of more medium-term securities than were acquired by life insurance companies.

Because there have been no new offerings of long-term marketable securities since the end of 1945, the average length of the outstanding marketable Federal debt has been automatically shortened during this period. Investors who are primarily bondholders have this reflected in their investment portfolios to a greater degree, of course, than do investors who hold primarily short-term debt. The average length of the holdings of life insurance companies and of mutual savings banks would have declined more sharply since 1945, therefore, if these institutions had not bought long-term issues in the market and sold shorter-term issues. They offset thereby, to some extent, the automatic shortening of their portfolios.

Commercial banks have been offered principally short-term securities throughout the war finance period and as a part of our postwar program. This has been a major factor in keeping their portfolios short on the average. The average length to first call or maturity date of the Government security holdings of commercial banks has declined from 7 years in June 1941 to about 3 years at the

present time.

There is considerable variation among banks throughout the country in the maturities of the Governments which they hold. Estimates of the average number of years to maturity of Governments held by commercial banks, by Federal Reserve Districts, are shown in chart E. Longer-term securities are generally held in the eastern areas—with the exception of New York City—than in the There are three districts in which the average length of Governwestern areas. ments held is less than 2½ years; and, as you can see from the chart, these areas are in the western part of the country. The shortest average length, 2 years, is found in the Kansas City Federal Reserve District; while the longest average length, 4¾ years, is in the New York District, excluding New York City. In this connection, it is interesting to note that as we go farther west, commercial banks also have more loans in proportion to their capital.

I have gone into these matters at some length to indicate how the present maturity distribution of the public debt developed. Our objective has been a smoothly functioning economy, and securities have been issued to the various investor classes

to suit their needs and the requirements of the economy.

In handling the new-money and refunding operations that are in prospect for next year, the interest cost of the debt to taxpayers must also be one of the considerations in our debt management program. The interest cost of the debt comprises over 13 percent of the Federal budget for the fiscal year 1950. annual cost is likely to grow, even without any increase in the debt, because the rate of interest on savings bonds increases as they approach maturity, and because an increasingly large proportion of the debt represents the accumulation of trust funds invested at an average interest rate which is higher than the present average rate on the total debt.

Even a relatively small increase in the average interest rate on the debt would add a substantial amount to the total annual interest cost. It is estimated that the interest on the debt will amount to \$5.7 billion in the calendar year 1949. About \$1½ billion would be added to this amount, if the average interest rate were ½ of 1 percent higher. The annual interest cost would be more than \$5 billion larger, if the average interest rate were equal to the average borrowing cost of World War I—which was approximately ½ percent. The annual saving in the taxpayers' money as a result of the present level of interest rates is an important factor in the budget picture of the Federal Government.

The distribution throughout the economy of the interest on the public debt is, of course, determined by the ownership of the debt. The next chart, which is chart F, shows interest on the Federal debt, by class of recipient, from 1946 through 1949.

It seems to me that the outstanding fact in this connection is the increase during this period in the interest on the Federal debt going to individuals. during the current calendar year is one-third of the estimated \$5.7 billion total. It rose from \$1.4 billion in 1946 to an estimated \$1.9 billion in the current year.

The share received by Government investment accounts also rose during this period, while interest payments to other nonbank investors declined slightly. The share received by commercial banks also declined. This was largely due to the Treasury's policy of concentrating debt reduction in the holdings of commercial banks.

Another way of looking at the interest cost of the debt is to consider the burden which it represents when compared with the gross national product of the country, from which it must be paid. The public debt is nearly 10 times as large as it was at the World War I peak in August 1919, as is shown in chart G. But, because we were able to finance the Second World War at a borrowing cost about one-half as great as the average borrowing cost of World War I, the interest cost of the public debt today is only 5 times, rather than 10 times, as large as it was in This does not, however, mean an interest burden 5 times as great. For, in the meantime, our gross national product has risen from less than \$80 billion in 1919 to an estimated annual rate above \$250 billion at the present time. have a tremendously increased product out of which to pay the interest on the debt, and the present interest cost is only 2.3 percent of gross national product. This compares with 1.4 percent in 1919.

One of the important refunding matters which will come before the Treasury in 1950—and in greater volume in 1951, 1952, and subsequent years—will involve the Government security holdings of individuals. These holdings amounted to \$69½ billion on October 31, 1949, up from \$65 billion on December 31, 1945, and

from \$10½ billion before the war, as shown in chart H.

Ownership of Government securities by millions of individuals is good for the country as well as for those individuals. It gives the people of the country an increased interest in the affairs of their Government and causes them to participate more actively in those affairs. We have continued to promote the sale of savings bonds in order to encourage thrift. Thrift has played a vital part in the building of our Nation, and, today, it is as important to our well-being as it has ever been in the past. At the end of October, \$48½ billion of savings bonds of all series were held by individuals. Savings bonds comprised 70 percent of their total holdings of Government securities. Holdings of E bonds alone—the bond which is designed

to meet the needs of small investors—amounted to \$33½ billion.

The savings bonds held by individuals at the present time are distributed broadly throughout the country. In chart I, the United States is divided into geographical areas to show that the \$48½ billion of savings bonds outstanding in the hands of individuals are distributed approximately as follows: \$16½ billion held in the northeastern area of the country; \$10 billion held in the States of Michigan, Illinois, Indiana, and Ohio; \$6 billion held in the southern part of the United States; \$6 billion held in the seven States which are the farthest west; and \$10 billion held in the large block of central States which is bounded roughly by the Mississippi on the east, the Rocky Mountains on the west, and stretches from Canada to Mexico. These savings bonds comprise a tremendous amount of assets in the hands of individuals. The \$48½ billion total seems particularly significant, if we recall that at the bottom of the depression—in 1933—national income in the country was only \$39½ billion. Across the Nation, people now have a cushion of reserves to fall back upon that is greater than the total income in the Nation in that year.

You may remember that during the latter years of the war there was considerable speculation as to the probable redemption experience with Series E bonds as soon as the war had ended. The opinion was freely expressed that the large quantities of bonds which were being sold under the pressure of patriotism and intensive wartime selling methods would be redeemed speedily as soon as the war Instead, as I have noted, we have continued to sell savings bonds was ended. and to increase the total amount outstanding. Redemption experience with Series E bonds is, in fact, more favorable than the postwar rate of turnover in other forms of savings. Chart J shows the annual rate of savings account withdrawals and savings bond redemptions, from 1943 to date, expressed as a percentage of total amounts outstanding. The rate of redemption of Series E bonds has been substantially lower than the rate of withdrawals from savings accounts. Furthermore, since the end of the war, savings bond redemptions as a percentage of the amount outstanding have followed a downward trend, while the rate of turnover of other forms of savings has followed an upward trend.

We have not, however, encouraged the sale of savings bonds at the expense of other types of savings. From December 31, 1945, through October 31, 1949, the increases in practically all other forms of individuals' savings were substantially

greater relatively than the increase in savings bond holdings.

I have been talking about some of the technical matters that will have to be considered in connection with Treasury borrowing and refunding. Uppermost in our minds in making all of our policy decisions is the fact that the foremost responsibility of the Secretary of the Treasury is to maintain confidence in the credit

of the United States. One hundred and fifty years ago, the main financial problem of our newly born Nation was to establish that credit. Confidence in our Government's financial soundness was successfully established; and it has been the responsibility of Secretaries of the Treasury for a century and a half to maintain it.

But never before has this responsibility been so great as since the end of World War II. The public debt increased more than fivefold during the war. It represents more than half of all of the debt of the country, public and private. It comprises a substantial proportion of the assets of the leading investor classes; and the decisions which are made with respect to it are of immediate and vital

significance to each and every one of us.

The primary concern of the Secretary of the Treasury in formulating debt management policies is to promote sound economic conditions in the country. Because the debt is so great, because it is such a large proportion of the total debt of the country, and because it is interwoven in the financial structure of the country, the policies and decisions made in the Treasury Department are of tremendous importance and significance to the economic and financial welfare of the Nation.

Figures on the total debt of the country—public and private—are shown in At the end of 1939, the debt of the Federal Government amounted to chart K. \$47½ billion and accounted for 23 percent of the total debt of the entire country. At the present time, the public debt amounts to \$257 billion and comprises 51

percent of all debt.

The estimated distribution of the ownership of the debt on October 31 of this year is shown in chart L. Nonbank investors held \$172 billion of Government securities—two-thirds of the \$257 billion of Federal debt outstanding on that date. It is particularly significant that the holdings of individuals are so large. They totaled \$69½ billion, as I mentioned earlier. Insurance companies held Mutual savings bank holdings totaled \$20½ billion of Government securities. \$11½ billion. Government investment accounts, principally Government trust funds which are required by law to be invested in Government securities, held \$39½ billion of the public debt. The holdings of "other" nonbank investors—which include State and local governments, corporations, pension funds, and charitable institutions—were \$31 billion.

One-third of the debt-\$85 billion-was held by the commercial banking Commercial banks held \$67½ billion; and the remainder, \$17½ billion,

was held by the twelve Federal Reserve Banks.

These figures are large, in dollar terms; and they are also a substantial proportion of the assets of the various investor classes, as shown in chart M. In the case of commercial banks, for example, holdings of Governments are equal to 56 percent of earning assets—a large percentage, but a sharp decline from February 28, 1946, when Government securities comprised over 70 percent of the earning assets of these institutions.

Nonbank investors—both financial and nonfinancial—also have a large share of their assets invested in Government securities. On October 31, mutual savings bank holdings of Governments represented 54 percent of their total assets; life insurance companies had 27 percent of total assets invested in Government securities; and other insurance companies—fire, marine, and casualty—had 47 percent. Nonfinancial corporations had 13 percent of their current assets in And, when we turn to individuals, we find that Government securities this form. accounted for 34 percent of their liquid assets—that is, their combined holdings of Government securities, savings and checking accounts, and currency-which approximated \$200 billion on October 31.

These figures are unmistakable evidence that the decisions which are made with respect to the public debt affect every segment of our economy. They indicate the compelling necessity for considering not only the effect of our decisions upon the financial structure of the Government itself, but their effect on

the financial and economic structure of the whole country.

It is for this reason that Treasury and Federal Reserve authorities have cooperated to keep the market for Government securities stable during the postwar Under the circumstances which existed, stability in the Government bond market has been of tremendous importance to the country. It contributed to the underlying strength of the country's financial system and eased reconversion, not only for the Government, but also for industrial and business enterprises.

This is in marked contrast to the situation after World War I, when prices

of Government securities were permitted to decline sharply—with disastrous

results. Investors suffered serious financial losses. And the decline contributed importantly to the business collapse that occurred in the early post-World War I period. These things happened at a time when the public debt was a much less powerful element in the economy than it is at the present time. It seemed obvious to us that widely fluctuating Government bond prices would have even more serious repercussions after World War II.

It is now four years since Victory Loan 2½'s were issued. Chart N shows the price history of the Victory Loan 2½'s after World War II, as compared with the price history of the Fourth Liberty Loan 4½'s during the corresponding period after World War I. At the end of the fourth year, Victory Loan 2½'s are above par; at the end of a similar period, Fourth Liberty Loan 4½'s were in the vicinity of par. But the price movements within the two periods differed radically. Victory Loan 2½'s have always been above par. The Fourth Liberty Loan 4½'s dropped substantially below par, reaching a low of about 82½. From this point, they had a long climb back before reaching par.

In the short-term area of the Government security market, we also had to consider the possible effect of our actions on the financial markets. When interest rates on short-term Government securities were raised, beginning in mid-1947, they were raised gradually in order not to disrupt these markets. When they

were reduced, the change was small for the same reason.

In the four years since VJ-day, the United States has achieved a record level of prosperity. There can be no doubt that world-wide confidence in the financial soundness of the Government of the United States played a prominent role in

achieving this prosperity.

I have gone into some of the current matters of public debt management with you in some detail in order to round out the entire picture for your Committee. Many of the answers to the questions submitted by your Committee to me and to other Government officials and agencies touched on some of the points that I have mentioned; but I felt that it would make for better understanding of the problems and considerations involved, if I summarized the current situation as it looks from my position as Secretary of the Treasury.

Exhibit 18.—Letter of Secretary of the Treasury Snyder, October 31, 1949, to the Chairman of the Subcommittee on Monetary, Credit, and Fiscal Policies of the Joint Committee on the Economic Report, replying to a questionnaire on monetary, credit, and fiscal policies

TREASURY DEPARTMENT, Washington, October 31, 1949.

My Dear Mr. Chairman: This is in reply to your letter dated August 22, 1949, in which you enclosed a questionnaire which you asked me to answer in connection with a comprehensive study relating to the effectiveness and coordination of monetary, credit, and fiscal policies, which has been undertaken by the Joint Committee on the Economic Report, by direction of Congress.

The subject matter of the questions falls into several main categories. All of the

questions are answered; but, since much of the material would be repetitive if each question were answered separately, I have taken the liberty of answering the questions by groups rather than question-by-question.

The first eight questions relate to the monetary and debt management policies of the Treasury and their coordination with the policies of the Federal Reserve

The questions are as follows: System.

1. What are the principal guides and objectives of the Treasury in formulating its monetary and debt management policies? What attention is paid to the interest costs on the Federal debt? To the prices of outstanding Government obligations? To the state of employment and production? To the behavior of price levels in general? To other factors?

2. To what extent and by what means are the monetary and debt

management policies of the Treasury coordinated with those of the Federal Reserve? Describe in detail the procedures followed for these purposes.

3. What were the principal reasons for the particular structure of interest

rates maintained during the war and the early postwar period?

4. To what extent, if at all, would a monetary and debt management policy which would have produced higher interest rates during the period from January 1946 to late 1948 have lessened inflationary pressures?

5. When there are differences of opinion between the Secretary of the Treasury and the Federal Reserve authorities as to desirable support prices and yields on Government securities, whose judgment generally prevails?

6. What, if anything, should be done to increase the degree of coordination of Federal Reserve and Treasury policies in the field of money, credit, and

debt management?

7. What would be the advantages and disadvantages of providing that the Secretary of the Treasury should be a member of the Federal Reserve Board?

On balance, would you favor such a provision?

8. What are the advantages and disadvantages of offering for continuous sale savings bonds of the E, F, and G Series with their present yields, maturities, and limitations on the annual amount to be purchased by each buyer? Does this policy lessen the supply of private savings for equity capital and riskier private What are the advantages and disadvantages of promoting the sale of these securities during periods of recession? Should the terms of these securities and the amount that each buyer may purchase be varied with changes in economic conditions?

The primary concern of the Treasury in formulating its monetary and debt inanagement policies is to promote sound economic conditions in the country. When I took office as Secretary of the Treasury, the country had only started the tremendous task of converting the economy from a wartime to a peacetime basis. Federal expenditures, which had raised the output of the United States to the highest levels on record during the war years, had been cut back sharply as soon as the war ended. In the fiscal year 1945, Federal expenditures had been just under \$100 billion, and had accounted for nearly one-half of the gross national product; in the fiscal year ending June 30, 1946, they dropped to a little over \$60 billion. This prompt cut in Federal expenditures after the close of the war was necessary and desirable; but it left the Nation facing the problem of replacing the production which had gone for war purposes with civilian production as rapidly as possible. There were many who felt that the reconversion could be achieved only after the country had experienced serious unemployment and severe economic dislocation. Government and business, farmers, and labor were all worried about many factors on the economic scene.

Not the least of the economic factors which were causing concern was the size of the public debt—which had increased more than fivefold during the war years. It was difficult at the time to forecast how so large a debt might be handled. The size was unprecedented, both in terms of the dollar amount involved and of the debt's relation to the economy of the country. On February 28, 1946, at its postwar peak, the Federal public debt stood at nearly \$280 billion. It constituted over 60 percent of all outstanding debt, public and private. At the end of 1939, before the United States started its defense and war finance program, the total public debt had stood at \$48 billion—this was only 23 percent of the

entire debt of the country.

At the end of the war, the public debt was widely held. This broad ownership made it possible for the debt to play its part in the flexible fiscal policy which was necessary to promote economic stability in the postwar period. composition of the debt was the result of conscious planning by the Treasury as a part of its policy of fitting Government securities to the needs of various types Practically all of the securities sold to commercial banks, for of investors. example, have been short-term, in order that the portfolios of banks would be This was essential if banks were to be in a position to finance kept highly liquid. Business corporations likewise have been provided with reconversion needs. short-term securities for the temporary investment of their reserve funds. ance companies and savings banks, on the other hand, have held longer-term securities—largely with maturities over ten years. Savings bonds have been, of course, the principal type of Government security held by individuals. At the same time, however, that broad ownership of the debt contributed to easing the problems of postwar debt management, it made good debt management particu-

larly vital, since every segment of the economy was affected.

When I became Secretary of the Treasury, total Government security holdings of individuals, including marketable as well as nonmarketable issues, amounted to \$64 billion—a significant change from the situation prior to the war, when they owned only about \$10 billion of Government securities. Over \$43 billion of the Government securities held by individuals were savings bonds. nonbank investors also held large amounts of Government securities. institutions had a substantial proportion of their assets invested in the public

debt issues of the Federal Government. For mutual savings banks, it amounted to \$11½ billion—about 64 percent of their total assets. All insurance companieslife, fire, casualty, and marine—held \$25½ billion of Government securities. Life insurance companies alone had holdings of \$22 billion—over 46 percent of their total assets. Federal agencies and trust funds, which are by law required to invest their accumulated funds in Government securities, held \$29 billion. Other nonbank investors, which include business corporations, State and local governments, and other small groups of investors, held \$32 billion.

The commercial banking system held \$108 billion of Government securities. Commercial banks held \$84½ billion of the total. This comprised 71 percent of The balance, \$23½ billion, was held by the Federal Reserve their earning assets.

Banks.

It was obvious that the decisions which had to be made with respect to a public debt which was so large, and which was interwoven in the financial structure of the entire economy, would significantly affect the economic and financial welfare of the country. It was essential, under these circumstances, that debt management be directed toward promoting and maintaining a stable and smoothly functioning economy. In the nature of things, the Federal Government must exercise firm control of debt management as long as the debt remains so large and so important. In the course of formulating debt management policies, I have consulted with advisory committees representing a cross-section of American business, for an exchange of views and information. These consultations have been helpful in determining the soundest possible debt management policies; but, in the final analysis, the responsibility for these policies belongs to the Secretary of the Treasury and under the law cannot be delegated.

As I have said, the overriding consideration in debt management policy is the economic welfare of the country. The Secretary of the Treasury has many responsibilities; but his primary one is that of maintaining confidence in the credit of the United States Government. In addition, in prosperous years such as we have enjoyed since the end of the war, it is important to reduce the total amount of the public debt and to reduce bank ownership of Federal securities and widen the distribution of the debt. Accordingly, these have been the principal objectives of the Treasury's debt management program during the postwar

period.

 To maintain confidence in the credit of the United States Government,— It is for this reason that stability in the Government bond market has been a continuing policy during the postwar period. Stability in the Government bond market during the transition period has been of tremendous importance to the country. It contributed to the underlying strength of the country's financial system and eased reconversion, not only for the Government, but also for industrial and business enterprises. This is in marked contrast to the situation after the First World War, when the severe decline in the prices of Government securities contributed to the business collapse that occurred within two years after

The particular structure of interest rates maintained during World War II was, with only minor variations, the one which existed at the time we began our defense and war finance program. It was apparent almost from the beginning of this program that it would require a large increase in the public debt; and an important consideration was the cost of the borrowed funds. It was especially fortunate, therefore, that interest rates were at a relatively low level. It made it possible to finance the war cheaply without disrupting the financial structure of

the country

Stability in the Government bond market since the end of the war has been achieved through the cooperative efforts of the Federal Reserve System and the Treasury Department. Some of the stabilizing measures—notably, of course, the operations of the Federal Open Market Committee—have been primarily the responsibility of the Federal Reserve System. Others have been primarily the responsibility of the Treasury Department.

In maintaining stability in the Government bond market, flexibility in adapting policies to changing economic conditions has been essential. It has been necessary

at times to take steps to prevent too sharp a rise in Government security prices; and, at other times, declining prices have been halted.

Beginning in the spring of 1947, the Federal Reserve and the Treasury took action to control an incipient boom in the Government bond market. Long-term bonds were sold from some of the Government investment accounts, the Investment Series of bonds was offered to institutional investors, and interest rates on

short-term Government securities were increased. All of these operations combined to take upward pressure off the market. When conditions changed, and a downward pressure on bond prices developed, the market was stabilized through purchases of long-term bonds. Short-term interest rates—which had been permitted to rise beginning in mid-1947—were held steady from the fall of 1948 until this summer. Then, in mid-September of this year, they were reduced.

All of these actions have been taken with a view toward promoting confidence in the Nation's business and financial structure and the attainment of a high level

of employment and production in the economy.

2. To reduce the amount of the debt.—In the statement which I made when I took office as Secretary of the Treasury in June 1946, I said:

"* * It is the responsibility of the Government to reduce its expenditures" in every possible way, to maintain adequate tax rates during this transition period, and to achieve a balanced budget—or better—for 1947."

During the first two fiscal years after I took office, the Federal Government

operated with a budget surplus. In the fiscal year 1948, the surplus was, in fact, the largest in the history of the country. Starting in March 1946, the large cash balances that had remained at the end of the Victory Loan were applied to the reduction of the public debt. These balances were largely expended during the calendar year 1946, and subsequent debt reduction was effected through pay-offs from the budget surpluses of the fiscal years 1947 and 1948. At its postwar peak on February 28, 1946, the public debt stood at \$279.8 billion; on June 27 of this year, it reached a postwar low of \$251.3 billion.

There is no longer a budget surplus, however, largely because of the tax reductions enacted by Congress in 1948, over the President's veto. As a result, the debt has been rising steadily in recent months; and at the end of September it stood at \$256.7 billion. Both President Truman and I have stressed the importance of continuing debt reduction in years of prosperity such as we have enjoyed since the This was one of the reasons why the President on three occasions end of the war. vetoed measures reducing taxes at a time when the economic condition of the country permitted continued retirement of the debt.

3. To reduce bank ownership of Federal securities and widen the distribution of the debt.—Strong inflationary pressures existed during most of the postwar period. In order that debt reduction would have the greatest possible antiinflationary effect, under these circumstances, it was concentrated on debt held by the commercial banking system. The concentration of debt reduction in bank by the commercial banking system. The dotten of the debt to the needs of investors, which had placed a large volume of short-term debt in the hands of the banking system. The reduction in the public debt held by the commercial banking system has been actually greater than the reduction in the total debt.

The total public debt was reduced \$28.5 billion from its postwar peak of \$279.8 billion to the postwar low of \$251.3 billion. During the same period, bank-neld debt was reduced by approximately \$34 billion. This came about because the Treasury was able to increase the Government security holdings of nonbank Funds from the sale of savings bonds and other nonmarketable issues investors. to nonbank investors were available for the retirement of maturing issues of bankheld debt, in addition to the budget surpluses of the fiscal years 1947 and 1948. There has been an increase of \$5.4 billion in the debt, however, since the low point was reached in June of this year; and at the end of September, the total amount of debt outstanding was \$256.7 billion. Bank holdings have increased approximately \$2 billion since the end of June, so that the net reduction in these holdings from February 1946 to the end of September totals \$32 billion.

Because of the social and economic benefits of broad ownership of public debt securities, the maintenance of the widespread distribution of the debt has been an essential part of the Treasury's postwar debt management policies. It has been one of the principal objectives in the continued promotion of savings bond sales. Broad ownership of the public debt is good for the purchasers of Government securities and it is good for the country. It gives to the people a greater sense of economic security and an enhanced feeling of personal dignity. It causes them to take an increased interest in national issues. It gives them a direct stake in the finances of the United States.

Another postwar objective of savings bond sales was to combat inflationary essures. The sale of savings bonds was a two-edged weapon against inflation. It took purchasing power directly out of the hands of consumers; and the funds obtained from the sale of savings bonds were available for the retirement of bankheld debt, thereby reducing the money supply to that extent.

We have continued actively to promote the sale of savings bonds to encourage thrift on the part of Americans. Thrift is a vital factor in our present-day life. The total amount of savings bonds oustanding at the end of September was over \$56½ billion, an increase of nearly \$8½ billion since the end of 1945. The success of the postwar savings bond program is especially notable since it was generally expected that a flood of savings bond redemptions would be one of the

generally expected that a flood of savings bond redemptions would be one of the major debt management problems as soon as the war ended.

Actually, the savings bond redemption experience has been better than the turnover rate on other comparable forms of savings. For example, during 1949, average monthly redemptions of Series E bonds have amounted to 0.91 percent of the total of Series E bonds outstanding. For other forms of savings the ratios of withdrawals to total deposits have been as follows: Postal Savings accounts, 3.57 percent; savings banks (in New York State), 2.32 percent; insured savings and learn associations. 2.30 percent; savings accounts in commercial banks. 4.86 and loan associations, 2.30 percent; savings accounts in commercial banks, 4.86 percent (1948 figure). Moreover, the trend of savings bond redemptions when related to the total amount outstanding has been downward since the end of the war, whereas the percentage trend of withdrawals in most other forms of savings has been upward.

The sale of savings bonds has not, however, been at the expense of other types During the period in which we were using the savings bond program as an anti-inflationary weapon, the whole tone of our advertising was to encourage personal savings in any practical form—not just to encourage the sale of savings Individuals have increased their holdings of savings bonds by 13 percent since the end of 1945. But, in this same period, individuals increased their shareholdings in savings and loan associations by over 60 percent; their life insurance by 30 percent; their deposits in mutual savings banks by 25 percent; their savings accounts in commercial banks by 15 percent; their checking accounts by about 10 percent; and their Postal Savings accounts by about 10 percent. Of the various forms of liquid savings, only currency holdings in the hands of

individuals declined.

The reasons for offering Series E savings bonds are, of course, not the same as those for offering Series F and G bonds. A "small" savings bond program was instituted in 1935 for the purpose of providing a risk-free investment for small investors. When it was decided early in the war to sell as large a portion as possible of the wartime security offerings of the Federal Government to nonbank investors, and especially to individuals, Series E savings bonds became the keystone of that policy. This was done in order to prevent a repetition of the post-World War I experience. After the war, the prices of Government bonds dropped precipitously—one of the Liberty Bond issues sold below 82—and small investors, inexperienced in the operations of security markets, were the greatest losers. Series F and G bonds, which are intended for larger investors than those reached by the Series E bonds were introduced early in 1041 as a part of the Treesury. by the Series E bonds, were introduced early in 1941 as a part of the Treasury policy of shaping offerings of Government securities to meet the needs of various investor classes.

The savings bond program, like other parts of the debt management policies of the Treasury Department, has been adapted to changing conditions in the economy. You asked whether the terms of savings bonds and limitations on purchases should be varied with economic conditions. We have done this to the extent that seemed necessary. On March 18, 1948, the limitation on holdings of Series E savings bonds purchased in any one calendar year was raised from \$5,000 (maturity value) for each individual to \$10,000 (maturity value), effective beginning in the calendar year 1948. In the fall of 1947, the Treasury offered the Investment Series bond—a savings bond type of issue—to certain institutional investors. Again in order to meet the needs of these investors, we raised the limitation on purchases of Series F and G bonds, for the period from July 1, 1948, through July 15, 1948.

Achievement of the debt management objectives of the Treasury Department requires day-to-day attention to debt operations. Decisions are made contin-

uously.

There is, for example, the matter of refunding maturing issues. This is one of the constantly recurring duties of the Department. There is a Treasury bill maturity each week. There are frequent maturities of certificates of indebtedness; and, in the postwar years, there have been several note and bond maturities each year. In addition, there are savings bond and savings note maturities—and redemptions of these issues before maturity. The volume of refunding carried through each year has amounted to approximately \$50 billion—in itself a

task of considerable magnitude. It exceeds the total of all security refunding engaged in by all other borrowers in the country during the past twenty-five

years.

The interest cost of the debt to taxpayers is another of the many considerations which must be taken into account in debt management policies. It is estimated that the interest charge on the public debt during the fiscal year 1950 will be \$5,450 million. This item represents over 13 percent of the Federal budget for the year. The interest cost is likely to grow over a period of time—in the absence of substantial debt reduction—because the rate of interest on savings bonds increases as the bonds are held to maturity, and because an increasingly large proportion of the debt represents the accumulation of trust funds invested at rates set forth in the law which are higher than the present average interest rate on the debt.

A general rise in interest rates would bring about a further rise in the budget charge for interest payments. An increase of as little as ½ of 1 percent in the average interest paid on the debt would add about \$1½ billion to this charge. The Treasury was able to finance the last war at an average borrowing cost of less than one-half the borrowing cost of World War I. If this had not been done, the interest charge at the present time would be more than \$10 billion a year instead of \$5 billion a year. It is clearly evident that this \$5 billion annual saving in the taxpayers' money is a highly important factor in the budget picture of the Federal Government.

It has been argued that if the Government had permitted higher interest rates on its long-term securities at the end of the war—that is, had permitted Government bond prices to drop below par—inflationary pressures would have been

lessened.

Fiscal-monetary weapons have only limited effectiveness in combating inflationary pressures. They operate against inflation in an over-all fashion. They can be used to cut down the total spending power of the economy and so are effective—and, in fact, indispensable—in periods of general price rise. Any curtailment of general spending power drastic enough, however, to bring special price situations into line might set off a severe deflationary spiral. High prices in special areas are most effectively dealt with by specific measures applied directly to those areas; and it was with this in mind that President Truman repeatedly asked Congress to enact appropriate legislation to deal with special areas of

inflationary pressures.

The Government's fiscal policy from January 1946 to late 1948 did, however, have a direct counterinflationary effect. Federal Government expenditures were cut rapidly and sharply from their wartime peak, while revenues were maintained at high levels. I have mentioned that President Truman on three occasions vetoed tax measures designed to cut revenues because he recognized the urgency of reducing the debt during this period. Debt reduction by the use of a surplus of receipts over expenditures was, in fact, the most potent anti-inflationary fiscal measure available to the Government. A surplus of Federal receipts over expenditures takes purchasing power directly out of the hands of consumers; and by using this surplus to reduce bank-held debt, the Treasury to a large extent offset the increase in the money supply due to other factors. I have already noted also the promotion of savings bond sales as an anti-inflationary measure; and that short-term interest rates were permitted to rise, starting in the summer of 1947.

The policy of stabilizing the Government bond market in itself made a substantial contribution to economic stability. I do not agree with those who believe that if the support prices of Government securities had been lowered below par, sales of these securities to the Federal Reserve would have been stopped and inflationary pressures would have been lessened. It seemed to me that under the circumstances which existed, we would have taken the risk of impairing confidence in the Government's credit if the prices of Government bonds had been permitted to go below par; and that as a result the Federal Reserve might have had to purchase more bonds below par than at a par-support level. This, of course, would have increased bank reserves and to that extent would have been

inflationary, rather than anti-inflationary.

During the postwar period, the country has enjoyed a level of prosperity never before achieved in peacetime. Personal income has reached the highest level on record, and has remained near that level. Civilian employment likewise

attained the highest peak in our history, and today there are nearly 60 million persons employed. There is no doubt that the successful management of the public debt and the maintenance of a continued period of stability in the Government bond market have contributed materially to the economic well-being of

the country during this period.

In the execution of its monetary and debt management policies, the Treasury consults with the Federal Reserve. The chairman of the Board of Governors of the Federal Reserve System and I discuss policy matters thoroughly and arrive at decisions which are mutually satisfactory. It does not seem to me that statutory directives to increase the degree of coordination of Federal Reserve and Treasury policies are needed. In my opinion, such policies can best be coordinated as they are at the present time, by discussions between the Secretary of the Treasury and the Chairman of the Board of Covernors of the Federal of the Treasury and the Chairman of the Board of Governors of the Federal

Neither would there be any particular advantage in providing that the Secretary of the Treasury should be a member of the Federal Reserve Board. Secretary of the Treasury did serve as a member of the Federal Reserve Board from its inception until February 1, 1936. There is no evidence that the coordination of Federal Reserve and Treasury policies was carried out any more effec-

tively during that period than it has been subsequently.

The Secretary of the Treasury is the chief fiscal officer of the Government. It seems to me that any proposal to make him a member of the Board of Governors of the Federal Reserve System for the express purpose of bringing about better coordination of Federal Reserve and Treasury policies would appear to subordinate the responsibility of the Treasury Department in fiscal-monetary matters. In the final analysis, the principal responsibility in the fiscal-monetary area must rest with the President and his fiscal officers, who are accountable to the electorate for their actions.

Questions 9, 10, and 11 are concerned with the monetary system of the United

The questions are as follows:

9. What would be the principal advantages and disadvantages of reestablishing a gold-coin standard in this country? Do you believe that such a

standard should be re-established?

10. Under what conditions and for what purposes, if any, should the price of gold be altered? What consideration should be given to the volume of gold production and the profits of gold mining? What effects would an increase in the price of gold have on the effectiveness of general monetary and credit policies? On the division of power over monetary and credit conditions between the Federal Reserve and the Treasury?

11. What changes, if any, should be made in our monetary policy relative to silver? What would be the advantages of any such changes?

I do not think that conditions require an alteration in the monetary system. As the Committee undoubtedly knows, I am on record as being opposed to any change in the price of gold; and the Treasury Department is firmly of the view that a gold-coin standard should not be re-established in the United States.

The Department has considered the latter proposal in connection with a number of bills which have been introduced in the Congress. For example, in the last session of Congress, we submitted a report to the Senate Banking and Currency Committee on bills S. 13 and S. 286. A copy of our report on those bills is

attached.

The present monetary policy of the United States relative to silver is laid down in three acts of Congress; namely, the Silver Purchase Act of 1934, section 4 of the act of July 6, 1939, and the act of July 31, 1946, which has largely superseded Under the third act, domestic silver mined since July 1, 1946, the 1939 act. may be delivered, at the owner's option, to United States mints for a return of 90.5 cents per ounce. The Treasury has no discretion under this legislative provision. Since this price is considerably higher than the open market price (now between 73 cents and 74 cents per ounce), the effect of this act is to divert to the United States Treasury at the 90.5 cent price substantially all of the current production of silver in the United States. On previous occasions, the Treasury has stated that it would interpose no objection if Congress wished to repeal all the provisions relating to acquisitions of silver in the above-named act.

¹ Omitted here. This was published in the 1949 annual report, p. 305.

Question 12 relates to the coordination of the lending and loan insuring and guaranteeing policies of the various Government agencies. The question is as follows:

12. To what extent and by what methods does the Treasury coordinate the activities of the various Government agencies that lend and insure loans to In what ways, if at all, should the Treasury's powers in this private borrowers? field be altered?

The Treasury does not, of course, have statutory authority to coordinate the activities of the various Government agencies that lend and insure loans to private borrowers. The Department has been instrumental, however, in furthering consultations between the heads of these agencies, with a view to coordinating lending, insuring, and guaranteeing policies. In the final analysis, it seems to me that this voluntary type of consultation is perhaps the best method of coordinating The heads of the lending, insuring, and guaranteeing agencies are these policies. responsible to the President; and the decisions which they make must be made in accordance with his policies. Furthermore, the policies and operations of these agencies are subject to annual review by the Congress in connection with their annual budgets.

Such limited authority as the Treasury has with respect to the lending, insuring, and guaranteeing policies of Government agencies is restricted almost entirely to the methods employed by the agencies in borrowing funds which they, in turn, are authorized to lend to private borrowers. For example, under the Government Corporation Control Act, "All bonds, notes, debentures, and other similar obligations which are . . . issued by any wholly owned or mixed-ownership Government corporation and offered to the public shall be in such forms and denomina-tions, shall have such maturities, shall bear such rates of interest, shall be subject to such terms and conditions, shall be issued in such manner and at such times and sold at such prices as have been or as may be approved by the Secretary of the Treasury" except that any mixed-ownership Government corporation from which Government capital has been entirely withdrawn is exempt from this provision during the period it remains without Government capital. In addition, the Federal intermediate credit banks, the production credit corporations, the Central Bank for Cooperatives, the regional banks for cooperatives, and the Federal land banks are specifically exempted from this provision, but are required to consult with the Secretary of the Treasury prior to issuing securities; and, in the event an agreement is not reached on the terms of the securities, the Secretary of the Treasury may make a report in writing to the corporation involved, to the President, and to the Congress stating the grounds for his disagreement.

There are only a few cases in which the Treasury has any direct control over lending operations of Government agencies. Reconstruction Finance Corporation loans on the nonassessable preferred stock of insurance companies can be made only upon certification by the Secretary of the Treasury of the necessity for such loans to increase the capital funds of the companies concerned. Also, under section 103 of Public Law 901, 80th Congress, the Administrator of Veterans Affairs has the authority, with the approval of the Secretary of the Treasury, to raise the permissible rate of interest on loans guaranteed or insured under title III of the Servicemen's Readjustment Act of 1944 from the rate specified in the law, namely 4 percent, to a maximum of 4½ percent. In addition, the Secretary of the Treasury, or an officer of the Treasury designated by him, is a member of the Board of Directors of the Federal Farm Mortgage Corporation.

In the field of foreign loans, there is in existence a coordinating and policy determining agency. The Secretary of the Treasury is Chairman of the National Advisory Council on International Monetary and Financial Problems, established by the Congress in the Bretton Woods Agreements Act, approved July 31, 1945. Among other things, the statute directs the Council to coordinate the policies and operations of the representatives of the United States on the International Monetary Fund and the International Bank for Reconstruction and Development, the Export-Import Bank of Washington, and all other agencies of the Government "to the extent that they make or participate in the making of foreign

loans or engage in foreign financial, exchange or monetary transactions."

Question 13 asks my opinion on the Hoover Commission proposal that supervision of the Federal Deposit Insurance Corporation be vested in the Secretary of the Treasury. The question is as follows:

13. What would be the advantages and disadvantages of adopting the Hoover Commission proposal that supervision of the operations of the F. D. I. C.

be vested in the Secretary of the Treasury? On balance, do you favor this

proposal?

The recommendation that the supervision of the operations of the F. D. I. C. be vested in the Secretary of the Treasury has been carefully considered. There is much to be said for the independent status which this agency now enjoys. policies are, in many cases, governmental policies which have been set after consultation with the President and other Cabinet members; and the agency can, therefore, function independently. However, it could also function as a part of

the Treasury. Question 14 asks my opinion with respect to the establishment of a National Monetary and Credit Council of the type proposed by the Hoover Commission.

The question is as follows:

14. What would be the advantages and disadvantages of establishing a National Monetary and Credit Council of the type proposed by the Hoover Com-

mission? On balance, do you favor the establishment of such a body? If such a council were established, what provisions relative to its composition, powers, and procedures would make it function most satisfactorily?

I am not opposed to the establishment of a National Monetary and Credit Council of the type proposed by the Hoover Commission. The establishment of such a council would not of itself, however, solve any indamental problem. But if such a council were established the Treesury Department would be hoppy. But, if such a council were established, the Treasury Department would be happy to contribute the accumulated knowledge and earnest efforts of its various staff groups.

Questions 15 and 16 relate to Federal budget policy. The questions are as

follows:

15. What, in your opinion, should be the guiding principles in determining, for any given period, whether the Federal budget should be balanced, should show a surplus, or should show a deficit? What principles should guide in determining the size of any surplus or deficit?

16. Do you believe it is possible and desirable to formulate automatic guides for the Government's over-all taxing-spending policy? If so, what types of guides would you recommend? What are the principal obstacles to the success-

ful formulation and use of such guides?

The general economic welfare of the country should be the guiding principle in determining for any given period whether the Federal budget should be balanced, should show a surplus, or should show a deficit; and in determining the size of any

surplus or deficit.

Since I took office as Secretary of the Treasury in June 1946, I have continuously urged a Federal budget that would permit debt retirement. Both President Truman and I have stated on a number of occasions that it is essential to reduce the public debt in years of prosperity, such as we have enjoyed since the end of This was one of the reasons why the President on three occasions vetoed tion measures. This has also been a major reason why the President tax reduction measures. has constantly limited budget expenditures to the minimum amount necessary to carry out the defense program and other essential domestic and international programs.

I do not believe that it is feasible to attempt to formulate automatic guides for the Government's over-all taxing-spending policy. The economic and social variants which should determine the policy in any given period are so numerous and for different periods are present in such different combinations that taxingspending policy can be determined only after the most careful consideration of the situation existing at any given time. Budget receipts and expenditures for each situation existing at any given time. Budget receipts and expenditures for each fiscal period must be examined item by item with due regard to their relative need and public service. This is a responsibility which can be discharged properly only by Congress.

One of the most frequently mentioned possibilities along these lines is that automatic guides can be established based on levels of national income. It obviously is not possible to say that under all circumstances the budget should be balanced when the national income is at any particular level; and it is not possible to provide by statute exemptions to cover all the cases when exemptions would be necessary. In my opinion, policy formulation and action must, of necessity, be left to the responsible authorities to be made in accordance with their best

judgment in view of economic developments as they occur.

Questions 17, 18, and 19 are concerned with the commercial banking system. The questions are as follows:

17. What were the aggregate amounts of interest payments by the

Treasury to the commercial banking system during each year since 1940?

18. What changes, if any, should be made in the ownership of the Federal Reserve Banks? In the dividend rates on the stocks of the Federal Reserve Banks? 19. What changes, if any, should be made in the laws relating to the disposal of Federal Reserve profits in excess of their dividend requirements?

The following table shows the estimated distribution of interest payments on the public debt, by class of recipient, for the calendar years 1940 through 1948:

	Total interest 1	Banks			Nonbank investors			
Calendar year		Total	Commer- cial banks	Federal Reserve Banks	Total	Individ- uals	U.S. Govern- ment in- vestment accounts	Other investors
		Billions of dollars						
1940	1. 1 1. 1 1. 5 2. 2 3. 0	0.3 .3 .5 .8 1.1	0.3 .3 .4 .7 1.0	(*) (*) 0.1 .1 .1	0.8 .8 1.0 1.4 1.9	0.3 .3 .4 .5 .7	0: 2 : 2 : 3 : 3 : 4	0.3 .3 .6
1945	4. 1 5. 0 5. 0 5. 4	1. 4 1. 5 1. 4 1. 4	1.3 1.4 1.2 1.1	.1 .1 .2 .3	2. 7 3. 5 3. 6 3. 9	1. 1 1. 4 1. 5 1. 6	.5 .7 .7 1.0	1. 1 1. 4 1. 4

*Less than \$50 million.

Interest payments to commercial banks amounted to approximately 27 percent of the total interest paid on the debt in 1940, but amounted to only 20 percent in 1948. Payments to the entire commercial banking system, that is, to commercial banks and Federal Reserve Banks—which amounted to about \$350 million in 1940 and \$1,450 million in 1948—similarly showed a decline as a per-

centage of total interest payments during this period.

Interest earnings on Federal Reserve Bank holdings of Government securities increased from \$42 million in 1940 to \$299 million in 1948, as a result of the wartime credit and currency needs of the country. The Board of Governors of the Federal Reserve System took the initiative in turning over a part of the Reserve Banks' relatively high earnings to the Federal Government, by invoking its authority to levy an interest charge on Federal Reserve notes issued by the Banks. In its announcement on April 24, 1947, the Board stated that the purpose of the charge was to pay into the Treasury approximately 90 percent of the net earnings of the Federal Reserve Banks in excess of their dividend requirements. Payments to the Treasury as a result of this action amounted to \$75 million in 1947 and \$167 million in 1948.

If Congress wishes, it can, of course, set forth specific statutory directives for the disposal of Federal Reserve Bank profits in excess of their dividend

requirements.
With respect to the matter of stock ownership of the Federal Reserve Banks and the dividend rate on this stock, I do not believe that there is any urgent need to deal with these questions at this time.

Very truly yours,

JOHN W. SNYDER, Secretary of the Treasury.

Honorable Paul H. Douglas, Chairman, Subcommittee on Monetary, Credit, and Fiscal Policies of the Joint Committee on the Economic Report, United States Senate, Room 109, Senate Office Building, Washington 25, D. C.

Actual payments on the basis of daily Treasury statements.

TAXATION DEVELOPMENTS

Exhibit 19.-Message from the President, January 23, 1950, transmitting a request for a revision of the tax laws

[House Doc. No. 451, 81st Cong., 2d sess.]

To the Congress of the United States:

The tax policy of the United States Government is of major significance to the Taxes are the means by which our people pay for the activities national welfare. of the Government which are necessary to our survival and progress as a Nation. Decisions about Federal tax policy should be made in full recognition of the economic and budgetary situation, and should contribute to our national objectives of economic growth and broader opportunity for all our citizens.

At the present time, I believe we should make some revisions in our tax laws to improve the fairness of the tax system, to bring in some additional revenue,

and to strengthen our economy

Our general objective should be a tax system which will yield sufficient revenue in times of high employment, production, and national income to meet the necessary expenditures of the Government and leave some surplus for debt reduction. In the budget message I estimated that receipts in the fiscal year 1951 will fall short of meeting expenditures by 5.1 billion dollars. This_defic t will be due largely to the short-sighted tax reduction enacted by the Eightiieth Congress, and to the present necessity for large expenditures for national security and world peace. Moreover, owing to the time lag between corporation earnings and tax payments, the 1949 decline in corporation profits will be reflected in lower tax receipts in the fiscal year 1951.

The policies I am recommending to the Congress are designed to reduce the deficit and bring about a budgetary balance as rapidly as we can safely do so. These policies are threefold: First, to hold expenditures to the lowest level consistent with the national interest; second, to encourage and stimulate business expansion which will result in more revenue; and third, to make a number of changes in the tax laws which will bring in some net additional revenue and at

the same time improve the equity of our tax system.

First, as to Government expenditures: I have recently transmitted to the Congress a budget containing recommendations for appropriations and estimates of expenditures for the fiscal year 1951. This budget was carefully prepared with a view toward holding expenditures to the lowest possible levels consistent with the requirements of national security, world peace, economic growth, and

the well-being of our people.

The decisions of the Congress, as well as unpredictable changes in circumstances over the next 18 months, may alter in many particulars the character and amount of the expenditures contemplated in this budget. Nevertheless, I believe the estimates contained in the budget represent the most realistic appraisal that it is possible to make at this time of the necessary expenditures in 1951. I believe the Congress will generally concur in this view after it has had an opportunity to consider these estimates carefully.

The expenditures estimated in the 1951 budget have been reduced by about \$900,000,000 below the level estimated for the present fiscal year. The policies recommended in the budget will permit further reductions in subsequent years

as the costs of some of the extraordinary postwar programs continue to decline.

To achieve these reductions we must continue to practice rigid economy. A the same time it would be self-defeating to cripple activities which are essential It will require wisdom and courage to find and hold to our national strength. fast to the course of wise economy without straying into the field of foolish budget slashes.

Second, as to the strength and growth of our national economy: We cannot achieve and maintain a balanced budget without a strong and prosperous economy. A recession in economic activity would call for increased Government expenditures

at the same time that revenues were reduced, thus creating greater budget deficits. At the present time the economy of the United States is growing, and we have every reason to expect it to continue to expand if we follow the right policies. It is largely the task of private business to achieve this growth. The Government, is largely the task of private business to achieve this growth. The Government, however, can and should contribute to it. Through such cooperation, national employment and income will grow. This will result, in time, in increasing Government revenues.

Just as the condition of our national economy has an overriding effect upon our efforts to balance the budget, so do our policies for managing the Federal budget have a decisive effect upon the national economy. Drastic reductions in Federal expenditures in the wrong places and at the wrong time could have serious dis-

ruptive effects throughout our economy.

Government revenue policies are as important in our economy as Government expenditure policies. Events of the last few years have proved that our economy can grow and prosper, and that employment, production, and incomes can increase, at the same time that individuals and businesses are paying taxes which are high by prewar standards. However, taxes can and do have an important effect upon business conditions and economic activity. It should be our constant objective to improve our tax system so that the required revenues can be obtained without impairing the private initiative and enterprise essential to continued economic growth.

We should always keep in mind that the maintenance of a sound fiscal position on the part of the Government is a long-range matter. Nothing could be more foolhardy than to attempt to bring about a balanced budget in 1951 by measures that would make it impossible to maintain a balanced budget in the following

Third, as to changes in the tax laws: If, over the next few years, we hold expenditures to the minimum necessary levels and at the same time follow policies which contribute to stable economic growth, we can look forward to steady progress toward a balanced budget. Nevertheless, we should not rely only upon budgetary economy and upon economic expansion to produce a balanced budget. We should accelerate the attainment of this objective by changes in the tax laws. Drastic increases in tax rates, just as in the case of drastic cuts in essential expenditures, might prove to be self-defeating. Our primary objective should be to improve and strengthen our revenue system for the long run.

Under these circumstances, I am now recommending a number of important business activity, and to yield about \$1,000,000,000 in net additional revenue.

In making changes in the tax laws, we should be sure they move toward, and

not away from, the major principles of a good tax system. Our tax structure should recognize differences in ability to pay; it should provide incentives to new undertakings and the expansion of existing businesses; it should support the objective of increasing opportunities for all our citizens to obtain a better standard of living; and it should rigidly exclude unfairness or favoritism.

Over the years we have made important progress in building a good tax system. owever, much remains to be done. There is need further to improve the distri-However, much remains to be done. There is need further to improve bution of the tax load to make it conform better with taxpaying ability. need to reduce taxes which burden consumption and handicap particular busi-Moreover, we should eliminate tax loopholes which enable some few to escape their share of the cost of government at the expense of the rest of the

Américan people.

Many of the important and desirable tax revisions which should be made must be postponed until the budget situation improves. Nevertheless, a number of

those steps can and should be taken now.

First, I recommend that excise taxes be reduced to the extent, and only to the extent, that the resulting loss in revenue is replaced by revenue obtained from closing loopholes in the present tax laws.

The excise taxes are still at substantially their wartime levels. Some are depressing certain lines of business. Some burden consumption and fall with particular weight on low-income groups. Still others add to the cost of living by increasing business costs.

Since we are limited in the amount of reduction we can now afford, we should choose for reduction those taxes which have the most undesirable effects. believe that reductions are most urgently needed in the excise taxes on transportation of property, transportation of persons, long-distance telephone and telegraph communications, and the entire group of retail excises, including such items

as toilet preparations, luggage, and handbags.

If these revisions are made, we will have reduced the most serious inequities of our present excise taxes. We should go further just as quickly as budgetary conditions permit. At present, however, we should reduce excises only to the extent that the loss in revenue can be recouped by eliminating the tax loopholes

which now permit some groups to escape their fair share of taxation.

The continued escape of privileged groups from taxation violates the fundamental democratic principle of fair treatment for all, and undermines public confidence in the tax system. While few of these loopholes by themselves involve major revenue losses, collectively they result in the loss of many hundreds of mil-

lions of dollars every year.

I wish to call the attention of the Congress to the more important of these loop-While some of them are of long-standing, their injustice has been aggravated as the taxes assessed against the rest of the population have been increased. A tax concession to a favored few is always unfair, but it becomes a gross injustice against the rest of the population when tax rates are high. The case for the elimination of these inequities would be strong even if there were no need for replacement revenue. It is compelling when excise relief depends on it.

I know of no loophole in the tax laws so inequitable as the excessive depletion

exemptions now enjoyed by oil and mining interests.

Under these exemptions, large percentages of the income from oil and mining properties escape taxation, year after year. Owners of mines and oil wells are permitted, after deducting all costs of doing business, to exclude from taxation on account of depletion as much as half of their net income. In the case of ordinary businesses, investment in physical assets is recovered tax-free through deprecia-When the original investment has been recovered, a depreciation deductions. tion deduction is no longer allowed under the tax laws. In the case of oil and mining businesses, however, the depletion exemption goes on and on, year after year, even though the original investment in the property has already been recovered tax-free, not once but many times over.

Originally introduced as a moderate measure to stimulate essential production in the First World War, this special treatment has been extended during later At the present time these exemptions, together with another preferential provision which permits oil-well investment costs to be immediately deducted from income regardless of source, are allowing individuals to build up vast for-

tunes, with little more than token contributions to tax revenues.

For example, during the 5 years 1943-47, during which it was necessary to collect an income tax from people earning less than \$20 a week, one oil operator was able, because of these loopholes, to develop properties yielding nearly \$5,000,000 in a single year without payment of any income tax. In addition to In addition to escaping the payment of tax on his large income from oil operations, he was also able through the use of his oil-tax exemptions to escape payment of tax on most of his income from other sources. For the 5 years his income taxes totaled less than \$100,000, although his income from nonoil sources alone averaged almost \$1,000,000 each year.

This is a shocking example of how present tax loopholes permit a few to gain enormous wealth without paying their fair share of taxes.

I am well aware that these tax privileges are sometimes defended on the grounds that they encourage the production of strategic minerals. It is true that we wish to encourage such production. But the tax bounties distributed under present law bear only a haphazard relationship to our real need for proper incentives to encourage the exploration, development, and conservation of our mineral resources. A forward-looking resources program does not require that we give hundreds of millions of dollars annually in tax exemptions to a favored few at the expense of

Some tax loopholes have also been developed through the abuse of the tax exemption accorded educational and charitable organizations. It has properly been the policy of the Federal Government since the beginning of the income tax to encourage the development of these organizations. That policy should not be changed. But the few glaring abuses of the tax-exemption privilege should

be stopped.

Responsible educational leaders share in the concern about the fact that an exemption intended to protect educational activities has been misused in a few instances to gain competitive advantage over private enterprise through the conduct of business and industrial operations entirely unrelated to educational activities.

There are also instances where the exemption accorded charitable trust funds has been used as a cloak for speculative business ventures, and the funds intended for charitable purposes, buttressed by tax exemption, have been used to acquire

or retain control over a wide variety of industrial enterprises.

These and other unintended advantages can and should be removed without jeopardizing the basic purposes of those organizations which should rightly be

aided by tax exemption.

A problem exists also with respect to life insurance companies. The tax laws have always accorded favorable treatment to the income received by individuals from life insurance policies and have made special provision for the taxation of life insurance companies. As a result of a quirk in the present law, however, life insurance companies have unintentionally been relieved of income taxes since 1946. This anomalous situation has meant that neither the companies nor their policyholders have paid taxes on more than 1.5 billion dollars of investment income per year, derived from productive assets worth about 60 billion dollars.

I understand that the Committee on Ways and Means of the House of Representatives has already undertaken to correct this situation for the past years. I urge that steps also be taken to develop a permanent system for the taxation of life insurance companies which will remove the inequities of undertaxation in this field without impairing the ability of individuals to acquire life insurance protection.

In addition to the tax loopholes I have described, there are a number of others which also represent inequities, and should be closed. Most of these permit individuals, by one device or another, to take unfair advantage of the difference between the tax rates on ordinary income and the lower tax rates on capital gains. As one example, under present law producers of motion pictures, and their star players, have attempted to avoid taxes by creating temporary corporations which are dissolved after making one film. By this device, their income from making the film, which ought to be taxed at the individual income tax rates, would be taxed only at the capital gains rate. Thus, they might escape as much as two-thirds of the tax they should pay.

All these loopholes have been under joint study by the Treasury Department and the staff of the Congressional Joint Committee on Internal Revenue Taxation. A practical program which would go far toward closing these loopholes can be enacted during the present session of the Congress. This would be a substantial step toward increasing the fairness of our tax system, and should add several hundred million dollars to its yield—sufficient revenue to permit

substantial excise tax reduction where it is most urgently needed.

I wish to make it very clear that I could not approve excise tax reductions unless they were accompanied by provision for replacement of the revenue lost, because I am convinced that sound fiscal policy will not permit a weakening of our tax system at this time. Under present conditions we cannot afford to reduce excise taxes first, in the hope that action will be taken later to make up for the loss in revenue.

Second, I recommend that the Congress enact legislation to provide \$1,000,000,000 in additional revenue, by revising and improving the estate and gift tax and the corporation tax laws. I believe that, under present economic conditions, this amount of additional revenue represents a proper balance between the objective of balancing the budget as soon as possible and the objective of coordinating

tax adjustments with the requirements of continued prosperity.

A substantial part of the additional revenue should be obtained from revision

of the estate and gift tax laws.

The Revenue Act of 1948 reduced the yield of the estate and gift taxes by one-third, or nearly \$300,000,000. Even before that act, estate and gift tax yields were out of line with other revenues, and that act made the situation worse.

were out of line with other revenues, and that act made the situation worse. In originally enacting the estate tax in 1916, the Congress pointed out that "our revenue system should be more evenly and equitably balanced" and that a "larger portion of our necessary revenues" should be collected from the "inheritances of those deriving most protection from the Government." Our estate and gift tax laws at present fall far short of this objective. They now produce less than 2 percent of internal revenues, compared with 7 percent 10 years ago. To the extent that these taxes remain too low, the remainder of our tax structure must bear a disproportionate load.

The low yield from the estate and gift taxes is due to serious weaknesses in the

present law.

These weaknesses include excessive exemptions, unduly low effective rates on most estates, and the fact that the law as written favors large estates over smaller ones, and leaves substantial amounts of wealth completely beyond the reach of the tax laws. Large fortunes may be transmitted from one generation to another

free of estate or gift tax through the use of life estates. By this means, vast accumulations of wealth may completely escape tax over several generations.

Furthermore, the present law affords excessive opportunities for tax reduction by splitting between the gift and estate taxes the total amount of wealth transferred by an individual. This makes the tax liability depend not upon the amount of wealth which an individual leaves to his family but upon the manner in which he arranges the disposition of his wealth. If a man leaves his estate of \$300,000 at death, one-half to his wife and one-half to his three children, an estate tax of \$17,500 must be paid. If his equally well-to-do neighbor gives away \$180,000 to his wife and three children over a 5-year period and leaves them the other \$120,000 at death, no estate or gift tax whatever is paid. This difference in tax, whether it depends upon fortuitous circumstances or the caliber of legal counsel, is obviously unwarranted.

To strengthen the estate and gift tax laws, several steps are necessary. The laws concerning the taxation of transfers by gift and by bequest, by outright disposition and through life estates, need to be coordinated to provide uniform treatment and a base for more effective taxation. In addition, the present exemptions should be reduced and the rates should be revised. These changes will not only bring in more revenue, but they will also improve the fairness of the estate and gift tax laws and bring these taxes nearer to their proper long-term

place in our tax system.

The rest of the additional revenue should be obtained from adjustments, in the corporation income tax. At the same time, certain improvements should be

made in this tax.

I recommend a moderate increase in the tax rate applicable to that part of a corporation's income which is in excess of \$50,000. At the same time, I recommend that the tax rate on corporate income between \$25,000 and \$50,000, which is now taxed at the excessively high "notch" rate of 53 percent, be reduced to the

same rate that applies above \$50,000.

These changes in the tax rate structure would go far toward removing the handicaps which the present law places upon the expansion of small corporations. The removal of the excessive "notch" rate would reduce the taxes paid by mediumsized corporations whose continued growth is so essential to the dynamic expansion of our economy. The existing favorable tax rates for small corporations with incomes below \$25,000 would be retained. The tax increase would be confined to less than one-tenth of all corporations.

Furthermore, I recommend that the loss carry-forward provision be extended from 2 to 5 years to provide more scope for offsetting losses of bad years against profits of subsequent years. This extension will give increased incentive to business investment affected by uncertain profit expectations. It will be particularly helpful to new businesses which, under the present provision permitting losses to be carried forward only 2 years, may be required to pay taxes over a period of several years during which they actually suffer a net loss.

At the same time that we make these changes in the tax laws to stimulate investment at home, we should make certain changes in the tax laws concerning income derived from foreign investments and personal services abroad. This would provide significant support to our efforts to extend financial and technical as-

sistance to underdeveloped regions of the world.

Among the steps which should be taken at this time are to postpone the tax on corporate income earned abroad until it is brought home, to extend and generalize the present credit for taxes paid abroad, and to liberalize the foreign-residence requirement for exemption of income earned abroad. These changes, together requirement for exemption of income earned abroad. with the safeguards for our investors which we are in the process of negotiating with foreign governments, will provide real stimulation for the expansion of United States investment abroad.

The tax program I am recommending is designed to strengthen our tax system so that it will yield revenues sufficient to balance expenditures as they are further reduced over the next several years, and to provide some surplus for debt reduction. Because of the time lag in collecting taxes after their enactment, these recommendations will not result in any substantial increase in receipts in the fiscal year 1951, but they will result in larger revenues in subsequent years and, at the same time, substantially improve the structure of our tax system for the long run.

A sharp increase in taxes under present economic conditions would be unwise. However, in line with the policy of gearing changes in revenue laws to the needs of our economy, I would not hesitate, if strong inflationary or deflationary forces should appear, to support the use of all measures necessary to meet the situation,

including more pronounced adjustment of tax rates upward or downward, as

the case might be.

We have come through the war and a difficult transition period with the financial strength of our Government maintained and an economy producing far above prewar levels. We should continuously seek to sustain and improve these indispensable foundations for progress. The tax program I am recommending is an important and necessary means to that end.

HARRY S. TRUMAN.

THE WHITE HOUSE, January 23. 1950.

Exhibit 20.—Statement of Secretary of the Treasury Snyder before the House Ways and Means Committee, February 3, 1950, on the President's tax program

I am pleased to have the opportunity of appearing before the members of this committee to discuss the President's tax program. As Secretary of the Treasury, I am charged with the responsibility for managing the Nation's finances in such a way as to maintain the soundness of the Government's fiscal position and, in so doing, to promote the financial health of the economy. A part of that responsibility, in my view, involves giving the members of this committee the most informative picture of which I am capable concerning the current state of the Nation's finances and the measures which, in my opinion, should be taken to assure continued soundness of Government

fiscal operations in the years ahead.

I am going to endeavor to give you that picture today. At the outset, I should like to make one point clear beyond the possibility of doubt. As chief fiscal officer of the Nation, I do not look lightly on Federal deficits. During my period of office as Secretary of the Treasury, I have taken every opportunity to express to the members of this committee and other congressional committees—as well as to individual citizens and groups of citizens throughout the country—my conviction that in prosperous periods such as the present, the Government should be able to pay for current expenditures out of current income; and that our revenue, in addition, should be sufficient to yield a surplus which could be applied to the reduction of the Federal debt.

As the President stated in his tax message of January 23, 1950, "Our general objective should be a tax system which will yield sufficient revenue in times of high employment, production, and national income to meet the necessary expenditures of the Government and leave some surplus for debt reduction." As you know, we are now enjoying a period of high employment, high production, and high national income. The number of persons employed in 1949 held near the 60-million level; and average employment during the year was only 1 percent below 1948. Total production of all goods and services in 1949 was \$259,000,000,000. This was only about 1½ percent below the all-time record reached in 1948. Personal income in 1949 was virtually unchanged from the high level reached in 1948; and the volume of retail sales, when adjusted for price changes, was actually greater in 1949 than in the preceding year.

The business statistics are unmistakable evidence of the basically strong economic situation which is being maintained throughout the country. During the past year, the country met and safely passed a

period of inventory readjustment which completed the shift to normal competitive markets. Yet—as the figures which I have just cited demonstrate—this period of readjustment resulted in very little disturbance in the rate of activity and trade in the Nation as a whole. Moreover, the accumulated demand for certain important goods and services which was the result of shortages during the war and postwar years has not yet been fully satisfied. Housing is an instance in point. Since the beginning of the Second World War in 1939, 20,000,000 people have been added to our population. That is equal to all the people in the Pacific Coast States at the beginning of the war, plus those in the eight Mountain States and in practically all of Texas. Moreover, the notable shift of population during and since the warparticularly the heavy movement westward—has greatly enlarged needs for new housing, and for new schools, churches, hospitals, and other community facilities. These are generally recognized needs which we can all see as we look around us; but it is important to remember also that our great industrial development has been built on a continuing progression of new products which have given successful support to business activity.

Today, we have the advantage of the unprecedented technical developments of the war and postwar years, which are rapidly being applied in bringing out new types of consumer goods, improving older products, and reducing production costs. Many of them, like the multitude of new plastic products, may be of small importance individually, but very important as a group. In other instances, single products or developments, such as television, give indications of occupying a major position in our national economy before long.

We stand, in fact, at the beginning of an era in which technical achievements based on the new discoveries in electronics, in synthetic and plastic materials, in metallurgy, and in many other areas of scientific research, will play a substantial part in our industrial

progress.

Under the exceptionally favorable economic conditions which prevail today and the prospects for continued economic progress in the future, a sound budgetary policy demands that Government receipts and expenditures be balanced. It was with this objective in mind that the Treasury opposed tax reduction legislation in 1947 and 1948.

The President recently has submitted tax recommendations to the Congress which, if enacted into legislation, will lay the groundwork for achieving a balanced budget without endangering the continuance of our programs for the maintenance of a strong domestic economy or the continuance of needed measures in this country and elsewhere for defense against aggression. In his tax message to the Congress on January 23, 1950, the President outlined a fiscal program designed to reduce the deficit and bring about budgetary balance as rapidly as possible. The policies embraced in this program were threefold, having to do with (1) reduced expenditures on the part of the Government, (2) measures aimed at encouraging and stimulating business expansion—which, of course, would result in enlarging our revenue base—and (3) changes in the tax laws which would serve the double purpose of bringing in some net additional revenue and improving the equity of our tax system.

I might add here, parenthetically, that our estimates of revenue receipts for the fiscal year 1951 are based on the assumption of a continued high rate of business activity. The President made this clear in the budget message when he said:

The estimates of receipts assume economic activity at approximately the same level as at the present time.

The decrease of \$457,000,000 in estimated receipts for the fiscal year 1951, as compared with the current fiscal year, is largely accounted for by an expected decrease in collections from corporation income taxes. This decrease reflects the fact that lower corporate profits in the calendar year 1949, as compared with the calendar year 1948, will not have their full effect on tax receipts until the fiscal year 1951.

The three policies outlined in the fiscal program of the President—namely, reduced Government expenditures, stimulation to business, and an enlarged and improved revenue system—are, as you will note, intermeshed. The success of each one is bound up with the success of the other two. I should like to discuss, first, the expenditure side of the picture, and second, the fiscal measures designed to increase our revenue and to distribute the tax burden more equitably among the individual citizens and business concerns of the Nation. I shall approach both of these questions from the point of view of their relationship to the current Federal financial picture and to the health and soundness of the national economy.

REDUCED GOVERNMENT EXPENDITURES

There is, first, the important matter of Government expenditures. Contrary to a belief which we often hear expressed, the people in Government are profoundly interested in improving the efficiency of the Government, in increasing the service which it renders to the public, and in reducing the cost of these services to the public.

This is not an unsupported statement, and it is not based on wishful thinking. Since the end of the war outstanding achievements have been realized in improving the organization and operating methods of the executive branch of the Government. The Congress recognized the importance of these measures last year in authorizing a special fund for use in extending management improvement throughout the Government.

These programs, however—as the members of this committee are well aware—do not make the headlines. They do not contain single billion-dollar items; and they relate, for the most part, to technical changes in management and operating procedures which can only be appreciated to their full extent by the members of the departments and bureaus concerned. In the aggregate, however, they not only add up to important savings in terms of dollars; they reflect, to my mind, a trend which is probably unique today among the governments of the world and which provides one of the strongest assurances of the continued success of democracy. We in this country are not endeavoring to retain unneeded services, and we are not content with performing essential services on the basis of costly or outmoded methods of operation. Rather, we are engaged in an active campaign to improve efficiency, increase service, and lower costs. In the three and a half years since I took office as Secretary of the Treasury, I have seen the

results of this campaign demonstrated in action; and I am convinced that it is one of the most important programs being carried on in the Government at the present time and one which is receiving far too little attention.

I am most familiar, of course, with the improvements in management and operation which have been instituted in the Treasury Department. At various times, I have reviewed these improvements before committees of the Congress. The most recent occasion was the statement which I made last month before House and Senate committees in connection with the Treasury's requests for appropriations for the fiscal year 1951. My time today does not permit a detailed account of the things which we have been doing in the Treasury. Within a few days, however, I shall submit to the Congress—as a part of the Annual Report of the Secretary of the Treasury on the State of the Finances—a summary of important policies and programs which the Treasury has pursued during the past 3½ years, including the programs for management improvement and greater

efficiency of operations.

You may be interested at this time, however, in an example of the concrete results which have been achieved in the Treasury Department in connection with one of the most important of our management improvement programs—that of the Bureau of Internal Revenue. In this Bureau alone, our recent appropriation request shows that improved procedures adopted during the past year or two have made it possible for us to decrease the number of employees on nonenforcement work by 657, representing an annual saving of 1,400,000 manhours equivalent to a dollar saving of \$2,800,000. These savings have made it possible to concentrate an increasing part of the Bureau's energies and resources on the work which is at the heart of its activities and of our revenue system—enforcement of Federal tax legislation. I need hardly emphasize to the members of this committee the importance of enforcement work in protecting and maintaining the great voluntary system of self-assessment and collection which is the fundamental source of our financial strength as a democratic govern-

The example which I have just cited is particularly pertinent to the matters which are under consideration by the members of this committee. But, throughout the Government, similar improvements have been taking place; and, while I cannot take more of your time to discuss them, I should like to add that a share of the credit for these improvements should go to members of congressional committees such as your committee who have given their time and effort to making certain that the people of this country get value received for every tax dollar.

The improvements in methods of operation and management which have taken place in the Government and which are planned for the near future are reflected in the budget estimates for the fiscal year 1951 submitted to the Congress by the President last month. But there is no way that I know of to spotlight in these estimates the savings which they represent, as compared with the costs of comparable services rendered the public in former years. I believe, however, that most fair-minded citizens who study the budget estimates for 1951 will agree with the President that they represent the

most vigorous application of a policy of holding the numerous activities of Government agencies in all fields to essential levels. President has explained, many requests for additional funds for highly meritorious purposes had to be denied in order to reverse the trend

toward higher governmental expenditures.

Under present conditions, however, reductions in costs as a result of improved efficiency in carrying on the ordinary activities of the Government can have only a limited effect on the Federal budget. Proponents of sharp reductions in Federal expenditures generally base their recommendations on the thesis that the present high level of Federal expenditures is not consistent with a return to normal peacetime Government operations. But, although we are not now engaged in a war, we cannot consider the present period a normal peacetime period. In each of the postwar years, by far the largest proportion of Government expenditures has been required to pay for the costs of past wars, to keep the Nation's defenses strong, and to further the cause of world peace. In the budget for the fiscal year 1951, such expenditures account for 71 percent of the total budget.

It seems to me that there is a general unawareness of the details of the expenditures projected in the Federal budget. Accordingly, I should like at this time to take a few minutes to go over some of the more important budget figures to show why it would be difficult to reduce the expenditures of the Federal Government below the estimates which President Truman sent to the Congress. In this connection, I will present some charts which I believe will make the dis-

cussion somewhat clearer.

As all of you know, of course, the President's budget message estimates that receipts in the fiscal year 1951 will total 37.3 billion dollars under existing tax legislation, and that expenditures will amount to 42.4 billion dollars which gives the projected budget deficit for the year of 5.1 billion dollars. These figures are shown on chart 1*; which also shows the budget picture for each of the fiscal years beginning with 1945. The budget deficit in 1945, the last full fiscal year of the war, was 53.9 billion dollars. Expenditures were reduced sharply in the following fiscal year, with the result that the budget deficit was reduced to slightly more than \$20,000,000,000 during that year. In the next two fiscal years, the Federal Government operated with a budget surplus. In 1947, it amounted to about 800 million dollars; and in 1948, it reached the unprecedentedly large sum of 8.4 billion dollars, primarily because of the continued sharp decline in expenditures in that fiscal year. Due to our increased domestic and international obligations, however, expenditures started upward again in the fiscal year 1949; but, in the meantime, Congress had enacted a tax reduction bill in April 1948, which cost us about \$5,000,000,000 of revenue annually. As a result, the Federal Government had a budget deficit of 1.8 billion dollars in the fiscal year 1949 and has operated with a deficit since then.

The estimated expenditures of 42.4 billion dollars in the fiscal year 1951 represent a decrease of \$858,000,000 from the fiscal year 1950, but an increase of 8.6 billion dollars over the postwar low of the fiscal It is important, therefore, for us to examine the projected year 1948.

^{*}Omitted in this exhibit.

expenditures, so that we may note just why this is so. Chart 2* shows the break-down of expenditures for the fiscal year 1951 by program. As I have already mentioned, the bulk of Federal expenditures is

As I have already mentioned, the bulk of Federal expenditures is required to pay the costs of past wars and to promote world peace. These costs can be summed up in four categories—national defense expenditures, veterans' expenditures, interest on the public debt, and

expenditures for international programs.

National defense expenditures continue to be the largest item in the Federal budget—nearly one-third of the total. In the fiscal year 1951, they will amount to an estimated 13.5 billion dollars. At the present time, nearly the whole world is in a state of cold war. Under these circumstances, the United States is making a vital contribution toward the goal of world peace by keeping its defenses strong and by maintaining a position of relative military readiness. With that goal so vitally important, it would be very easy to permit expenditures for national defense to get out of hand. It is, therefore, particularly commendable that vigorous actions have been taken to keep these expenditures within reasonable limits—and at levels which are within the capacity of the economy to sustain.

Defense expenditures comprise a wide variety of programs. These expenditures are analyzed by type of program, and by agency, in

chart 3.*

Over one-third of the estimated expenditures for 1951 is for military pay and support, although the figure is slightly less than for the current fiscal year. The other principal items of national defense expenditures—so far as cost is concerned—are operation and maintenance of equipment and facilities, and major procurement activities.

There are two lesser items—so far as cost is concerned—whose significance, it seems to me, must be apparent to everyone. These are the proposed expenditures for the stock piling of strategic and critical materials, amounting to \$650,000,000, and research and development amounting to \$606,000,000. I might mention that the research and development programs classified under national defense do not include the atomic energy development program which, in itself, requires expenditures of \$817,000,000.

The remainder of national defense expenditures is for organized

reserves, administration, and other related minor items.

The second largest of the war and peace programs is that for veterans' services and benefits. Expenditures for the various veterans' programs are estimated at 6.1 billion dollars for the fiscal year 1951—one-seventh of all budget expenditures for the year. When we add these expenditures to those for national defense, we have already

accounted for 46 percent of the budget.

The size of the requirements for veterans' services and benefits reflects the fivefold increase since 1939 in the number of veterans, and the new readjustment benefits provided for World War II veterans, as well as increases in services and benefits to veterans generally. Most of the expenditures for veterans' services and benefits depend upon how many veterans or their dependents apply and qualify for aid. There are some 300 laws under which payments may be made.

Expenditures for veterans' programs are shown in chart 4.* They are expected to be \$825,000,000 lower in the fiscal year 1951 than in

^{*}Omitted in this exhibit.

⁹⁰⁷⁷⁹⁵⁻⁻⁵¹⁻⁻⁻⁻¹⁴

the current fiscal year. This decline in trend should continue in the next few years as the temporary readjustment benefits under the

GI bill taper off or expire under existing legislation.

The next item in the war and peace group is one which cannot be I refer to the interest on the public debt. The amount involved represents the contractual obligation of the Government to pay interest at stipulated rates on public debt securities—predominantly issued to finance the last war. This is something, of course, which is of direct concern to me, as Secretary of the Treasury. It is a large item—5.6 billion dollars—and comprises 13 percent of the budget. You might note that 59 percent of the total budget is now accounted The Treasury Department has been criticized as being too concerned with keeping the cost of servicing the debt low, without regard for other considerations of debt management. I have tried to make it clear that keeping the cost of the debt low is only one of many considerations involved in debt management decisions. The overriding consideration is to promote sound economic conditions in the country. The importance of maintaining confidence in the credit of the United States Government—the core of our economic system—I feel cannot be overemphasized.

The last program which we classify in the war and peace category is the program for international affairs and finance. Estimated expenditures in the fiscal year 1951 will amount to 4.7 billion dollars, which is 21 percent below the estimate for 1950. These expenditures are shown in chart 5*. By far the largest portion of these expenditures

is for the European Recovery Program.

These four war and peace programs comprise, as I have said, 71 percent of the budget. There remains only 29 percent of the budget—12.5 billion dollars—to finance the rest of the Government's operations. Not all of these expenditures by any means, however, are what we

might call the running expenses of the Government.

Expenditures in this group finance the Government's programs in many broad areas such as housing, education, social welfare, aids to agriculture, research, transportation, and natural resources. They include specifically such expenditures as those of the Atomic Energy Commission and the postal deficit. They include expenditures for flood control, for soil conservation, for reclamation, and for a score of other activities which the Government must perform in order to conserve our natural resources. More importantly, these expenditures finance functions which the Government must perform in order to conserve our human resources. These include expenditures for education, for private and public housing, for social security—for all the Government programs which contribute to the vitality of the American people.

In my appearance before your committee today, I have necessarily had to restrict myself to a brief summary of the budget expenditures proposed by the President. A detailed analysis of these items, however, will bear out the President's statement that the budget was carefully prepared with a view toward holding expenditures to the lowest possible levels consistent with maintaining a strong domestic economy and fostering national security and world peace.

^{*}Omitted in this exhibit.

PROPOSED CHANGES IN THE TAX LAWS

The analysis of budget expenditures makes it clear that our best hope of reducing the deficit and working toward a balanced budget at this time is the adoption of measures which will increase Federal President Truman in his special tax message to Congress recommended a program which would result in increased tax revenues. I turn now to a detailed discussion of these recommendations.

The President has made clear the necessity for integrating taxation with our broad national economic objectives. Tax revision can contribute to the maintenance of national prosperity, continued economic

opportunity, and world peace.

The immense task of increasing tax revenues during the war overshadowed the equity considerations which in normal times could not be disregarded. In meeting the unavoidable obligations imposed by our postwar problems we have been compelled to postpone necessary adjustments in the tax system. Most of the tax revision which must ultimately be made will involve a sacrifice of revenue that is now urgently needed to meet our greatly enlarged responsibilities. revisions, however, should no longer be postponed. They have become essential to strengthening the economy and removing the most serious inequities from the tax system.

The tax program submitted by the President represents a careful balance between revenues and expenditures in the light of present and prospective economic conditions. It stresses those things which

should come first.

As the committee is aware, the Treasury has been giving continuous study to the problems of postwar tax revision. Various aspects of the tax system have been considered in terms of the requirements of an expanding economy. As a part of this work, a number of technical studies have been prepared to assist your committee. has been conducted on a cooperative basis with the staff of the Joint Committee on Internal Revenue Taxation, and similar conclusions have been reached on many problems of tax revision.

My views on the objectives of tax revision were outlined before this committee nearly 3 years ago. At that time I set forth these goals: The Federal tax system must produce adequate revenue, treat taxpayers equitably, minimize interference with incentives to work and invest, contribute to the maintenance of stable high-level production and employment, promote improved living standards, and

facilitate tax administration and compliance.

At that time substantial future revenue leeway was anticipated for constructive tax revision, and I presented in some detail the major problems requiring attention. The large tax reduction which followed a year later dissipated the revenue surplus and, with it, opportunity to make desirable and necessary tax improvements.

The recommendations of the President to the Congress are designed to place tax revision in proper perspective. If the right course is pursued, most of the fundamental tax problems I listed for attention

3 years ago can be dealt with.

It is important that a beginning be made now. It is equally important that we exercise forbearance and undertake no more than

can be afforded.

To this end, the President has made two broad recommendations. The first is that excise taxes be reduced to the extent that the resulting loss in revenue is replaced by closing loopholes in the present tax laws.

This means that excise tax reduction must be limited to about

\$600,000,000.

The second recommendation of the President is that additional revenue of \$1,000,000,000 be provided by revising and improving the estate and gift taxes and the corporation income tax.

I turn now to a detailed discussion of these recommendations.

EXCISE TAX REDUCTION

Since only a limited amount of revenue may be lost at this time, we should select for reduction those excise taxes which are most harmful. The most urgently needed reductions, as the President indicated, are in the excise taxes on transportation of property, on transportation of persons, on long-distance telephone and telegraph communications, and in the retail excises.

I should like to state briefly why these taxes have been considered

to have the most compelling claim for attention.

In our studies of excise tax problems we have had the benefit of discussions with numerous taxpayers and their representatives, business and labor organizations, and civic and governmental groups. We have carefully considered the facts and viewpoints presented in determining which taxes are most burdensome to the industries affected, which create most serious competitive problems, which fall with undue weight on low-income groups, and which impose barriers to investment and consumption.

The committee has had the benefit of our technical studies on these taxes, and I shall be glad to supplement them with additional information at the desire of the committee. Summary tables showing the changes in excise tax rates since 1939 and the estimated revenues for the fiscal year 1951 are attached to my statement (exhibit 1*).

The taxes on transportation of property, on transportation of persons, and on long-distance telephone and telegraph communications have some defects in common. They all fall on regulated public services, which are used widely and predominantly by business. The tax on transportation of property is almost entirely a cost of doing business. Excise taxes on business costs tend to be pyramided through successive mark-ups by those handling goods in the various stages of production and distribution. The cost of living of all consumers is increased out of proportion to the tax imposed. In addition, the taxes thus added to the prices of goods and services generally are the most burdensome on lower-income groups.

The Members of the Congress through their own experience with the 15 percent tax on passenger fares can readily appreciate the discrimination which businessmen face in paying for the transportation of their salesmen, shipping their goods, and maintaining telegraph or

telephone contact with their markets.

The benefits from reduction of these taxes would be widely distributed among business and consumers. The reductions would be

Omitted in this exhibit.

promptly reflected in the costs of those using the services. The increased use of transportation and communication facilities would involve little additional cost where excess capacity now exists and, therefore, would improve the position of the businesses affected.

The retail excises were raised to their present 20 percent rate during the war when the sales of the taxed articles were increasing under the stimulus of excess consumer purchasing power. Under the competitive conditions prevailing today, this high rate of tax is working hardship on many businesses and their employees. Small businesses, often of a family type, are penalized. A reduction in these taxes would

stimulate employment and production.

Although only a limited revenue loss can be afforded at this time, the President's program permits excise tax reduction which will relieve the most serious inequities and should produce the most significant benefits. Specifically, the program permits the elimination of the freight tax, reduction of the 15 percent tax on transportation of persons to 10 percent, reduction of the 25 percent tax on long-distance telephone and telegraph communications to 15 percent, and reduction of all the 20 percent retail excises to 10 percent. The net cost of these revisions, after allowing for the extension of the tax on radios to television, which is required in the interest of tax equity, would amount to over \$600,000,000. The details of this program are presented in the following table.

Tax	Present rate	Reduced rate	Estimated revenue loss on an annual basis
Transportation of property Transportation of persons Long-distance telephone and telegraph Retail excises: Furs Luggage Jewelry Toilet preparations 1 Total	25 25 20 20	Percent 0 10-15 10 10 10 10 10 10 10	Millions +\$310 75 120 25 35 80 50
Increase from including televisions in present manufacturers' excise tax on radios. Total revenue loss.	0	10	40

¹ Estimated revenue loss allows for the exemption of baby oils, powders, and lotions.

In suggesting these reductions I do not mean to imply that there are no other competing demands for excise tax reduction or that some of these taxes, particularly those on communications and transportation of persons, should not be further reduced when conditions permit. However, in view of our budgetary situation we must defer a while longer revisions in such areas as the manufacturers' excise taxes.

CLOSING OF LOOPHOLES

The President has called attention to the more important loopholes which should be closed to provide replacement revenue for excise tax reductions.

I should like to emphasize the importance of this action by indicating its bearing on our work in administering the tax laws. One of

my foremost objectives since I became Secretary of the Treasury has been constantly to improve our relations with taxpayers.

We have taken great pains to inform taxpayers of their rights as

well as their duties in complying with the law.

We are using the most advanced management methods to facilitate the filing of returns and the swift disbursement of refunds.

Continuous efforts are being made to achieve adequate detection

and correction of underpayment and overpayment of taxes.

We all know that the workability of our tax system and especially of the income tax depends on the high regard our people have for the fairness of our tax laws and their administration. We will strengthen taxpayer confidence by closing loopholes which bestow unjustified benefits.

By arrangement with your committee, our staff has been working with the staff of the Joint Committee on Internal Revenue Taxation since last summer on developing legislative suggestions for eliminating loopholes. The recommendations in this area represent the product of this joint effort. Other loopholes are still under study and will be brought to the attention of your committee at some future time.

I should like to refer first to the special allowances for depletion.

SPECIAL DEPLETION ALLOWANCES

Depletion in ordinary accounting usage is intended to permit taxpayers to recover the cost of mineral properties over the producing life of the properties. Depletion is the counterpart of depreciation which is intended to permit recovery of the cost of other assets over the period of their useful life. When the original investment has been recovered, no further depreciation is allowed for tax purposes. However, in the case of depletion, special provisions which allow recovery of more than the cost of mineral properties have been in the law since 1918.

Under present law, special allowances are granted on the basis of specified percentages of gross income for different types of minerals. The percentage of gross income allowed is 27½ percent for oil and gas, 23 percent for sulfur, 15 percent for metals and a large number of

nonmetallic minerals, and 5 percent for coal.

Percentage depletion continues for the life of the property and generally results in the tax-free recovery of many times the cost. It is granted to those purchasing properties as well as to those operating properties they have developed. The allowances have become more valuable as tax rates have been increased.

Furthermore, the benefits from percentage depletion are increased by provisions which permit development costs to be deducted as an expense in the year incurred instead of being treated as a capital cost to be recovered later through depletion deductions. This is equivalent to a double deduction for the same costs, once when they are incurred and again under percentage depletion. In the oil industry during 1946 and 1947, for every \$3,000,000 allowed as percentage depletion, another \$2,000,000 was deducted as development costs.

The combination of percentage depletion and the expensing of development costs provides a mechanism for pyramiding extensive

holdings in oil assets with payment of little or no income tax.

As the President has indicated, millions of dollars are made annually from operating oil properties on which little or no income tax is paid. The President mentioned one outstanding example. You will find others in the attached material (exhibit 2*). In the examples cited, annual incomes, on the average, of over \$1,000,000 were obtained on which an average tax of only 22½ percent was paid. This is the rate now paid by persons with incomes of less than \$25,000.

These illustrations suggest how much additional revenue the Government would gain by limiting some of these special allowances.

You will find from an examination of the materials I am submitting to assist the committee in considering revision of these provisions that:

First, the estimated revenue loss is between 400 and 500 million dollars annually. This is as much as the yield of all the retail excises.

Second, the allowance is especially excessive in the case of oil and gas and exempts a higher proportion of the earning of this industry which may expense more of its development costs than the other mineral industries.

Third, the provision has been found to be of little benefit to small

prospectors on whose behalf it is so frequently supported.

Fourth, these deductions enable high-income individuals to reduce to negligible proportions taxes on income from sources totally un-

related to these industries.

There are a number of ways in which the necessary revision of present allowances can be accomplished. In general, these involve either the limitation of percentage depletion or the termination of the option to expense development costs. The benefits of expensing development costs are confined to the finding of new properties. Percentage depletion on the other hand may be obtained on established as well as new properties, and regardless of whether the recipient contributed to the development of the property. The reduction of percentage depletion would tend to reduce windfalls while protecting incentives for exploration.

A reasonable way to reduce the excessive benefits would be to limit the percentage of gross income which might be deducted as depletion. A reduction in the present net income limitation would leave the more excessive allowances untouched while reducing the

benefits on the small, less profitable properties.

Specifically it is proposed that percentage depletion for oil, gas, and sulfur be reduced to 15 percent of gross income and that percentage depletion for nonmetallic minerals be reduced to 5 percent. The existing 15 percent rate for depletion allowed to the metals would be

left unchanged.

It is further proposed that oil and gas operators who elect to expense intangible drilling and development costs be required to reduce income from the property by the amount of such expensed costs in computing their depletion allowance. This requirement will reduce the extent of the double deduction now enjoyed by oil and gas enterprises with respect to certain of their capital costs.

Together these proposals would remove the more obvious inequities of the present system without interfering significantly with production

incentives.

^{*}Omitted in this exhibit.

BUSINESS OPERATIONS OF CHARITABLE AND EDUCATIONAL ORGANIZATIONS

I suggest the consideration of legislation to eliminate the abuse of tax exemption by charitable and educational organizations. These exemptions reflect a long-standing Federal Government policy to encourage the activities of such organizations.

The law has been interpreted by some courts to attach the exemption to the destination of the income rather than its source. Some colleges and other institutions are engaging in a wide variety of business undertakings, including the production of such items as automobile parts, chinaware, and food products, and the operation

of theaters, oil wells, and cotton gins.

Advantage is also being taken of the exemption by the purchase of rental properties with borrowed funds. In this type of operation the nonprofit organization enjoys advantages over privately owned business which is measured by the amount of the tax privately owned enterprise is required to pay. This advantage permits these institutions to apply a larger portion of rental receipts to repayment of borrowed funds than is possible for a privately owned business paying income tax. The exemption should be limited to income received from ordinary investments which involves no abuse.

The correction of present abuses, which shift additional burdens to the rest of the population, becomes essential for reasons of equity. This calls for a solution which will eliminate the abuse but will not

interfere with the basic activities of these organizations.

To meet this problem, it is recommended that the income derived by these institutions from the operation of businesses which are clearly unrelated to their primary functions be taxed at regular

corporation income tax rates.

Another closely related abuse of tax exemption involves the establishment of so-called charitable foundations or trusts which serve as a cloak for controlling businesses. The present law permits the transfer of business investments to tax-exempt trusts and foundations for these purposes without payment of estate or gift taxes. The income subsequently received from the business by the trust or foundation is exempt from income tax.

The abuse to which this type of device lends itself is the retention and reinvestment of a major share of the trust income in a manner

which will benefit the grantor.

One method to eliminate this abuse would be to require that such trusts or foundations pay out substantially all net income within a specified period after the close of every taxable year. A further requirement should be a prohibition against dealings between the trust and its creator or businesses under his control and against the use of the trust for the personal advantage of the grantor.

LIFE INSURANCE COMPANIES

The President has urged legislation to terminate the undertaxation of life insurance companies without impairing the ability of individuals to acquire life insurance protection.

The action you have recently taken in the House of Representatives will correct the provision which unintentionally relieved this industry

of tax for 1947, 1948, and 1949. The spirit in which this was accomplished is highly gratifying. However, as you know, legislation is also required to provide an equitable basis for the taxation of life insurance companies in the future.

As the committee is aware, the staffs of the Treasury and Joint Committee have devoted a great deal of attention to this matter.

believe that the thorough consideration already given this problem has developed the information you will require in devising a satis-

factory solution.

In considering this matter I have been continually impressed with the magnitude of the stream of life insurance income amounting to more than 1.5 billion dollars a year from investment income alone. The \$60,000,000,000 assets of this industry constitute an important fraction of our total wealth. I do not believe that favored taxation is in the best interest of this industry in the long run. Nor do I believe that it would be supported by the policyholders, who are a

majority of the population.

Since 1921 life insurance companies have been taxed on only one source of income, namely, income from investments. It is difficult to develop an equitable method for computing a deduction for obligations to policyholders when this income alone is taken into consideration. I consider the industry-wide average which has been used since 1942 a most inequitable basis for permanent taxation. The present system which is in effect a flat tax on gross income disregards the wide variations in profitability of operations between different companies, and is at variance with the accepted principles of taxing each corporation on its own net income.

Since insurance company operations generally are based on profits from writing life insurance as well as investment income, a more inclusive tax base would recognize underwriting profits as well, in other words, total income. This method would permit more comprehensive treatment of the differences in forms of income and the reserve policies of the individual companies. Several approaches to the taxation of life insurance income are discussed in material attached

to this statement (exhibit 3*).

OTHER TAX LOOPHOLES

Additional revenues should be raised by closing a number of less important loopholes which taken together constitute a substantial barrier to effective and equitable taxation.

A number of tax loopholes together with proposed remedies are described in a memorandum attached to this statement (exhibit 4*). This list was developed jointly by the staffs of the Treasury Department and the Joint Committee on Internal Revenue Taxation.

A number of these loopholes arise out of defects in the capital gains tax structure, which provides a maximum effective rate of 25 percent on gains from capital assets held for more than 6 months. President, in his recent tax message to the Congress, gave an example of one of these loopholes, the "collapsible" corporation, through which individuals, engaged in the business of producing certain types

^{*}Omitted in this exhibit.

of property, have attempted to convert ordinary business and earned

income into long-term capital gains.

Another important loophole provides a "one-way street" for taxpayers selling property which they have used in their trade or business. At the present time, such taxpayers are allowed capital gains treatment when the sales result in a net gain, while net losses from such transactions are allowed in full as offsets against ordinary income.

In addition, there is the loophole through which investors in securities and commodities, for some years now, and without any appreciable risk, have been able to convert short-term gains into the more favorably treated long-term gains, and to create largely fictitious short-

term losses, by means of short sales.

The tax laws also contain some loopholes and tax havens through which taxpayers are able to avoid tax completely. Domestic corporations, for example, are frequently able to avoid income tax on income from operations abroad through the formation and subsequent liquidation of foreign subsidiaries.

Another loophole has in the past enabled many corporations desiring to sell property to avoid income tax upon such transaction by first

distributing the property in kind to a parent company.

Also, the exemption provided in section 251 of the Internal Revenue Code virtually relieves all Government employees working in possessions of the United States from income tax upon their salaries, and enables many other American citizens to obtain exemption for all of

their foreign income from businesses and other sources.

It is of course not possible to estimate with any degree of accuracy the revenue consequences of an extensive loophole-closing program of the type proposed by the President. This program will have direct revenue effects by closing loopholes which now permit leakages throughout the tax system. In addition, it will indirectly increase revenues, since it will remove competitive disadvantages which now retard taxable private enterprise. We believe that in the long run the closing of these loopholes, including the proposals on percentage depletion and life insurance taxation, has a revenue potential of upwards of \$500,000,000 a year assuming present economic levels. The immediate revenue gain will be appreciably less. The \$500,000,000 is exclusive of the approximately \$90,000,000 which will be produced by the committee's stopgap life insurance legislation.

ADDITIONAL REVENUE

The President has recommended that \$1,000,000,000 in additional revenue be obtained by revising and improving the estate and gift taxes and the corporation income tax.

This additional revenue is essential to the objective of balancing the budget as rapidly as requirements of national economic policy

permit.

As the members of this Committee well know, I consider the protection of the financial position of our Government the major responsibility of my office. In the fiscal years 1947 and 1948 there was a substantial surplus for debt reduction. The deficit which subsequently developed has given me serious concern and I have earn-

estly considered the ways in which a favorable budget position might be restored.

As I pointed out earlier, the President has stressed the fact that present expenditures are necessarily at a high rate because of obligations undertaken at an earlier date, and that he expects reductions in expenditures in subsequent years as the cost of some of the extraordinary postwar programs tapers off.

I believe that we would be ill-advised at this time to raise the general level of taxation sufficiently to cover the cost of all of the extraordinary expenditures embraced in the postwar adjustment programs.

The tax revisions recommended by the President provide a basis for achieving the revenue goals necessary to maintain our Government on a sound basis. The amount of net revenue immediately involved in the President's program is not a full measure of what we can expect from his recommendations. In the long run the removal of inequities will make for a more vital economy, and this in turn will reflect itself in higher tax yields.

REVISION OF ESTATE AND GIFT TAXES

The President has recommended that a substantial part of the additional revenue be obtained by revising and strengthening the estate and gift taxes in a manner which would bring these taxes nearer to their proper long-term place in our tax system.

As the President said:

To the extent that these taxes remain too low, the remainder of our tax structure must bear a disproportionate load.

The disparity in present tax burdens becomes striking when the trends of the estate and gift taxes and the individual income tax are compared. This comparison is shown in charts* appended to this statement. They show that the estate and gift taxes have not kept pace with the income tax.

The total yield from the estate and gift taxes has barely doubled since 1939 while total internal revenue is 8 times as large and the individual income tax is 18 times as great. This is shown in chart 6*. Because of the relatively greater expansion in other tax revenues, the estate and gift taxes produced only 2 percent of internal revenue in 1949 compared with 7 percent ten years earlier.

Chart 7* compares the current exemptions under the estate tax and individual income tax with those in effect 10 years ago. You will note that individual income tax exemptions have been reduced substantially during this period. By contrast, the estate tax exemption, especially for married persons, has increased.

The estate tax reaches only a little more than 1 percent of adult decedents, virtually the same proportion as 10 years ago. On the other hand the individual income tax is paid by more than 40 percent of all persons over 14 years of age, 10 times the proportion taxed in 1939. This comparison appears in chart 8*.

The effective rates of tax on incomes at all levels have increased substantially. Those on estates, on the other hand, have actually been reduced for married persons. This is illustrated by chart 9*.

^{*}Omitted in this exhibit.

For example, the tax on an income of \$10,000 has risen from 4 percent to 16 percent. Tax on an estate of \$250,000 has fallen from 11

percent to 4 percent.

The weakness of the present estate and gift taxes results from:
(1) the overly favorable treatment of property placed in trust for several generations, (2) the opportunity to escape the higher estate tax rates by making gifts subject to lower tax rates, (3) the large exemptions, and (4) the ineffectiveness of the present rate schedule. last two weaknesses were greatly magnified by the estate and gift

splitting provisions introduced by the 1948 act.

1. Life estates: If property is left outright to a child, it may become taxable in the estate of the child. This may be avoided by placing the property in trust for the child's life since the termination of the child's interest in the trust is not considered a taxable event under the present law. A study accompanying this statement reveals that individuals with large estates are placing a substantial part of their property in trust for more than one generation (exhibit 5*). An examination of several hundred large estate tax returns showed that about 45 percent of the property available for distribution was placed in trust. The trusts were frequently created to endure, not only for the lives of the children, but also for the lives of more remote descendants.

This widespread practice seriously depletes the base of the estate and gift taxes and penalizes those less motivated by tax considerations or lacking the opportunity or counsel to take advantage of it. stantial additional revenue could be obtained by revising the present The Treasury staff is prepared to present a proposal dealing with this problem at the convenience of the committee.

2. Dual transfer tax system: The imposition of separate, unrelated taxes upon property disposed of during life and at death defeats the objective of estate taxation. The property given away during life is removed from the highest bracket of the estate, it is taxed at only three-fourths the rate of the tax on an estate of equal amount, and the gift tax unlike the estate tax is not included in the tax base. An individual with \$10,000,000 can, by giving away \$2,000,000 of this amount during life instead of at death, reduce his total taxes by about \$1,000,000. As is indicated in the attached study on property transfers (exhibit 5*), the discrimination against transfers made at death favors the larger estates and prevents equal treatment of transfers of the same amount distributed in different ways.

The discrepancies in present treatment would be removed by integrating the separate gift and estate taxes into a single transfer tax. The same exemptions and tax rates would then apply to all property whether transferred during life or at death. Under an integrated estate-gift tax structure, it would be possible to provide incentives for property distributions during life, in the event such encouragement

is deemed to be desirable.

A report based on a comprehensive study by an advisory committee of the Treasury, consisting of prominent tax practitioners, which I transmitted to your committee 3 years ago deals with this entire prob-

Omitted in this exhibit.

lem. The Department has since given further study to this matter

and is prepared to present proposals to the committee.

3. Exemptions and exclusions: The present estate tax exemption is \$60,000 and the gift tax exemption is \$30,000. In addition, annual exclusions of \$3,000 for each of an unlimited number of donees are accorded under the gift tax. By taking advantage of the 1948 amendments a man with a wife and three children, who has \$300,000 of property, may give them \$24,000 a year, plus an additional lump sum of \$60,000, without paying any gift tax. Upon his death, he has another \$60,000 exemption. If he leaves at least half of his estate to his widow, then the \$120,000 remaining at his death is totally exempt, half as a result of the marital deduction and the other half as a result of the exemption. Thus, during a 5-year period the family would have received the entire \$300,000 free of any tax.

The integrated transfer tax would require only a single exemption of \$45,000, all of which would be available to the estates of persons making no gifts; \$15,000 of the \$45,000 exemption would be available

for transfers during life.

The excessiveness of the \$3,000 gift tax exclusion for each recipient of gifts could be overcome by limiting tax-free gifts made by any one individual each year to \$3,000. An additional allowance of perhaps \$500 for each done might be adopted to avoid the need to account for

small gifts.

4. Rates: There are two principal weaknesses in the present rate schedule. First, the estate tax begins at the low rate of 3 percent and the gift tax at 2½ percent. Second, the higher rates in the present schedule are reached only in the case of unusually large estates. It would be necessary for a married person splitting his property under the 1948 amendments to have an estate in excess of \$20,000,000 before any part would be taxable at the top bracket rate.

A rate schedule which would overcome these objections and raise substantial revenue is attached. The schedule would start at 10 percent, and reach the present top rate of 77 percent at \$3,000,000

instead of \$10,000,000.

Assuming taxpayers make no gifts during life and reserve full \$45,000 exemption until death.
 Assuming full use of marital deduction.

These adjustments in rates and exemptions will do little more than restore the yield of the estate and gift taxes to their strength prior to the introduction of estate splitting between husband and wife by the 1948 Revenue Act. If this provision were eliminated, the President's revenue objective could be obtained by relatively minor changes in rates and exemptions.

In estate and gift tax revision, it would also be desirable to make certain minor improvements in these taxes. These include repeal of the deduction for support of dependents and the substitution of a tax credit for the present deduction for prior taxed property.

I have stated in some detail the present deficiencies in these taxes in order to emphasize the urgent need for revisions. Only by taking such action now can the full potentialities of these taxes be realized in future years.

The changes I have outlined would increase the yield of estates and

gift taxes on an annual basis by about \$400,000,000.

No other method of raising this additional revenue would have less serious effects on the economy. The amount of tax on the estate involving a business which might properly be considered small would not materially affect the normal development of such a business. In the infrequent instances in which liquidity is a problem, the extension of tax payments permitted by present law up to a maximum of 10

years protects estates from having to make forced sales of property at a serious financial loss.

REVISION OF THE CORPORATION INCOME TAX

The President has recommended revisions in the corporation income tax to improve the present rate structure and provide additional revenue.

During most of its history the corporation income tax law has accorded preferential tax treatment to small business. To preserve such treatment when the wartime rates were imposed, an excessively high rate of 53 percent was applied to corporations with incomes between \$25,000 and \$50,000. This so-called "notch" rate provided the transition from the low rates on small corporations to the generally applicable higher rates. The elimination of this high "notch" rate would remove an obstacle to the expansion of small business.

This objective could be attained by applying the general corporation tax rate above \$25,000 and to allow all corporations the reduced rates below \$25,000. This would substantially reduce the tax on corporations in the present "notch" area and also accord some reduction to

corporations with incomes above \$50,000.

The general corporation income tax rate should be increased to recover the revenue loss associated with the suggested "notch" rate adjustment and also to contribute to the reduction of the budget deficit.

I suggest that the present 38 percent general corporate rate be raised to 42 percent. This would produce an estimated \$675,000,000 additional revenue annually, after allowing for the revision in treatment of smaller corporations as suggested by the President.

Although the great majority of corporations are relatively small, the large bulk of corporation income is concentrated among the very large corporations. This is apparent from chart 10* which shows that one-eighth of all corporations receive 90 percent of total income.

Under the revised program only those corporations with net income above approximately \$120,000 or less than 10 percent of all corporations would have increased tax liabilities. The taxes on corporations with incomes between \$25,000 and approximately \$120,000 would be reduced, the reduction reaching a maximum of almost 15 percent of the present tax at \$50,000. They represent about 15 percent of all corporations. The relative changes in tax for corporations of different size are shown in chart 11* and in more detail in the following table:

No. of the last of	Tax lia	Percent	
Net income	Present law	. Proposal	change
\$5,000 \$10,000 \$25,000 \$30,000 \$50,000 \$75,000 \$100,000 \$118,750 \$250,000 \$118,750 \$11	\$1, 050 2, 200 5, 750 8, 400 19, 000 28, 500 38, 000 45, 125 95, 000 380, 000 38, 000, 000	\$1, 050 2, 200 5, 750 7, 850 16, 250 20, 450 26, 750 37, 250 45, 125 100, 250 415, 250 41, 195, 250 41, 195, 250	0 0 0 -6.55 -14.47 -10.31 -6.14 -1.97 0 +5.53 +9.28 +10.40

Omitted in this exhibit.

Corporate profits and dividends have increased substantially since the present rates were adopted in 1945. The proportion of profits retained, and thus not subjected to tax in the hands of stockholders, is considerably in excess of the normal prewar proportions. In view of the relatively strong position of large corporations at the present time, I believe that the small tax increase proposed will have no important adverse effects on the economy.

In addition to the revision of the corporate tax rates, I also recommend the extension of the period for offsetting losses against profits of subsequent years. The need for giving business greater leeway to recover losses has been widely recognized in discussions of postwar tax revision. Taxing profits without adequate recognition of losses creates inequities and restrains risk-taking. A dynamic economy requires a continued stream of new ventures, which often result in losses for a series of years before they become profitably established. A longer period for carrying over loss will be especially beneficial to small and new businesses.

I recommend a 5-year carry-over with a 1-year carry-back. This would provide a total period of 7 years in which losses might be offset against profits. This provision would involve no immediate loss in

revenue.

The President also referred to tax revisions which would facilitate the extension of financial and technical assistance to underdeveloped regions of the world. These recommendations are designed to implement in part the Point IV Program, and I should like to review them

briefly.

As you know, the earnings of a foreign subsidiary of a domestic corporation are not taxed until such earnings are transferred to the parent corporation in the United States as dividends. An American business which prefers to conduct its foreign operations as a branch of a United States corporation does not have this advantage. It must include in the taxable income each year the current earnings of its foreign branch. Foreign branch operations should be placed on an equal footing with foreign subsidiaries by allowing postponement of tax on their income until it is returned to the United States. This is not only a matter of equity, but would also encourage new invest-

ment abroad and the reinvestment of foreign earnings.

The credit for taxes imposed by other countries helps to eliminate international double taxation, but it needs to be adapted to our policy of encouraging private investment abroad. A United States corporation may now claim credit for the taxes paid by a foreign corporation with respect to the dividends received from the foreign corporation only when it owns a majority of the voting stock. One of the consequences of this requirement may be illustrated by the case of two domestic corporations which pool their resources to form a foreign subsidiary. If each owns 50 percent, neither one obtains a foreign tax credit. Where the ownership is divided unequally, only the one having majority control is allowed a credit. To facilitate joint ventures abroad and to meet the requirements or desires of foreign countries for local participation in these ventures, we should reduce the present ownership requirement for foreign tax credit.

Foreign investment would also be encouraged by the liberalization

of the foreign tax credit in the cases where losses in one foreign country

offset profits in another.

Service abroad by American experts is essential to the Point IV Program, both in the provision of technical assistance in the strict sense and in the functioning of private investment. We should remove discouragement to Americans participating in those activities by making the present exemption of their earnings applicable to the entire period they reside abroad once they have established a bona fide foreign residence.

The foreign tax credit has worked successfully in the income tax field, and it can be extended with equally satisfactory results to the estate tax. By so doing, we shall remove another of the barriers which sometimes keep able technicians and businessmen from undertaking assignments abroad, and I urge the committee to take such action. These changes in tax provisions are discussed more fully in an attached

statement (exhibit 6*).

They should not be viewed as the only necessary incentives for the participation of private capital in foreign economic development. Their potential effects will be realized only if foreign countries take positive steps to create conditions under which private capital can operate satisfactorily. This can be accomplished to an important degree by the negotiation of investment and tax treaties, which the administration is endeavoring to secure.

[The charts and exhibits omitted in this exhibit are published in Revenue Revision of 1950—Hearings before the Committee on Ways and Means, House of Representatives, 81st Congress, 2d session, volume 1.]

Exhibit 21.—Statement of Secretary of the Treasury Snyder before the Senate Finance Committee, July 5, 1950, on H. R. 8920, a bill to reduce excise taxes, and for other purposes

I am pleased to have an opportunity to appear before the members of this committee as you begin consideration of the tax revision bill, H. R. 8920, which the House of Representatives passed on June 29.

I read with great interest, Mr. Chairman, your statement that the committee decided to proceed with tax legislation in the full knowledge that present plans may need to be altered by developments in Korea. I am glad that the committee has decided to prepare a bill for action with the understanding that it could be halted if conditions later indicate that it would be unwise to go through with the legislation. I am in accord with this view of the committee and will present my testimony on the basis of this understanding.

In strengthening our resources for possible eventualities, improvement in the Government's fiscal position is a basic requisite of national

preparedness.

At the outset I should like to make it clear that the position which I have taken on other occasions with respect to our revenue system has not changed. It is my conviction that our general objective must be a tax system which yields sufficient revenue during prosperous times to meet the necessary expenditures of the Government and to leave some surplus for debt reduction. This was the goal expressed

^{*}Omitted in this exhibit.

^{907795—51——15}

by the President in his tax message to the Congress last January. It is the position I have taken on many occasions in appearances before committees of the Congress. It is the only position consistent

with my responsibility to the American people.

In the 5 months since I appeared before the Committee on Ways and Means of the House of Representatives in support of the President's tax program, it has become increasingly apparent that 1950 will be one of the most productive business years in our history, in terms of the actual output of goods and services. During recent months there has been growing recognition that the strong upturn in business this year is something more than a temporary inventory replenishment, as some had characterized it earlier. It is more than a mere rebound from the lower production levels of 1949. There is no longer reason to question that the business improvements this spring and summer represent an important forward movement in our national economy.

The strength of this movement, in fact, has been so widely recognized in recent weeks that I shall not take your time on this occasion to go into the details of the business situation. I should like to stress, however, that personal and business incomes—the most important elements in our revenue potential—have continued during 1950 at a very high level. Excluding the special insurance dividend to veterans, personal incomes this year are well above the corresponding period a

year ago, and not far from the record figures of 1948.

The earnings of business concerns, likewise, have continued to be exceptionally favorable. Corporate profits before taxes have been advancing steadily throughout the past 12 months, and are estimated for the first half of 1950 at an annual rate of a little under \$33,-000,000,000—almost \$5,000,000,000 higher than a year ago, and not far from the record annual total of approximately \$35,000,000,000 in 1948. You may be interested to note, in addition, that the present level of corporation profits, on an annual basis, is more than three times as high as the prewar record level of \$10,000,000,000 in 1929.

Under these conditions of exceptional prosperity for both individuals and business concerns, we cannot justify less than a maximum effort to meet current expenditures and to further the program for reducing our outstanding debt. This principle is the foundation of our financial strength. With relations between nations in a troubled state, we cannot afford a short-range approach to the vital matter of

the financial soundness of the United States Government.

The Federal deficit for the fiscal year 1950 amounted to 3.1 billion dollars and is estimated in the President's budget message of January at 5.1 billion dollars for the fiscal year 1951. If we do not take active measures to reduce deficits during periods of high business activity, we cannot hope to find our economic defenses at full strength to meet emergencies—either in the domestic field, or on the international front.

The financial strength of our Government, as you know, depends in part on its income. It depends on income derived from a revenue system which is fair and equitable as between taxpayers, adequate to meet governmental requirements, and of sufficient size during prosperous times to make some repayment on debts incurred in the past. Because of the size and importance of the Federal debt and of

Federal financial operations, it is important also to make certain that our Federal revenue system does not bamper business and trade, but

as far as possible acts to stimulate it.

The revenue proposals embodied in the bill before you make progress toward these goals, which were outlined in the President's tax message. But the House bill does not go the whole way. The bill in its present form has the merit of making improvements in the equity of our tax system. It provides stimulation to business in certain areas in the form of lowered excise taxes on various products and services still taxed at wartime rates. It also provides lower taxes for smaller corporations, together with various measures which will be of direct assistance to business operations—for example, more liberal provisions permitting the business losses of one year to be deducted from the taxable income of other years. The proposals which you are considering do not provide, however, for increased revenue, although the need for keeping the finances of the Federal Government in a sound condition is even greater now than it was at the beginning of the year when the President made his tax recommendations.

I urge the members of this committee, therefore, to review fully the proposals for improving our revenue system outlined in the President's program, which I submitted in detail to the Committee on Ways and Means of the House of Representatives on February 3, 1950.

I turn now to the discussion of the House bill, first, in the light of the President's program and, second, with respect to its detailed pro-

visions.

THE PRESIDENT'S PROGRAM

The President's program has a threefold purpose: (1) to improve the fairness of the tax system, (2) to bring in some additional revenue,

and (3) to strengthen the economy.

In submitting this program to the Congress, the President recognized that in certain limited areas tax reduction was desirable. He proposed a conservative excise reduction program which balanced the most urgent needs for relief against the constraints imposed by an

unbalanced budget during prosperity.

The excise taxes are still at substantially their wartime levels and their revision to better conform with present-day competitive business conditions is overdue. Judicious reductions in these taxes can make an important contribution to an improved revenue system. Not only will the tax system be made more equitable for consumers but the changes will aid employment and sales in the industries affected. Over the long run we should aim to reduce the role of excises in the tax system.

In view of our budgetary situation, however, the President recommended the closing of an accumulation of tax loopholes as a source of

replacement revenue for the excise tax reductions.

In addition, the President recommended that a moderate amount of new revenue be obtained partly from the corporation income tax and partly from the estate and gift taxes, which now are not making a proportionate contribution to the Government's revenues.

Recent events have underscored the importance of the objectives of the President's program. Improvement in the equity and effec-

tiveness of the tax structure is especially necessary at a time when taxes must remain high. Taxpayers bearing disproportionate and discriminatory burdens must be relieved. Favored groups must not be provided with unwarranted opportunity to escape taxes intended

to apply generally.

The Committee on Ways and Means devoted more than 4 months to an intensive study of the President's program and gave most careful consideration to the separate proposals. It also explored other potential revisions in the tax system and developed a revenue bill which goes a long way toward meeting the objectives set by the President. When important tax revisions are undertaken, it is to be expected that the shape of complex legislation covering a wide variety of problems will not accord precisely with any single conception of the desired objectives. Compromise is characteristic of the democratic legislative process.

The House bill provides for excise tax reduction on a substantial list of commodities and services of mass consumption and relieves a number of industries that are in a relatively unfavorable position.

By closing serious loopholes in the present law, the bill would improve both the equity and administration of our tax system and also produce substantial revenue offsets to the excise tax reductions.

The revision of the corporation income tax contained in the bill would recoup most of the remaining revenue lost from excise tax reduction at the same time that it reduces taxes and eliminates the inequitable "notch" provision for the benefit of smaller corporations.

The principal deficiency of the House bill is its failure to add as much strength to the revenue system as the President recommended. It does not reduce the present excessive depletion allowances granted oil and mineral producers under the income tax but rather extends these allowances to new areas. Moreover, it fails to revise and strengthen the structure of the estate and gift taxes.

In addition, the bill contains some provisions which would create new inequities. I will call your attention to these in my discussion

of the detailed provisions of the bill, to which I now turn.

DETAILED PROVISIONS OF THE BILL

EXCISE TAX REDUCTION

The President indicated that reductions are most urgently needed in the excises on transportation of property, transportation of persons, long-distance telephone and telegraph communications, and the four retail excises.

The plan for implementing the President's recommendations which I outlined to the Committee on Ways and Means would involve a net revenue loss of \$655,000,000. The excise tax reductions made in the House bill amount to \$1,010,000,000 and cover some groups

not encompassed by the President's proposals.

The reductions in the retail excises on jewelry, fur, luggage, and toilet preparations from 20 percent to 10 percent would amount to \$240,000,000, including the elimination of the tax on handbags and a number of miscellaneous items, such as baby oils, powders, and lotions. These reductions have a high priority because in recent

years the 20 percent rate has depressed sales and employment in the taxed industries.

The transportation tax reductions amount to about \$230,000,000. The bill would reduce the tax on transportation of persons from 15 percent to 10 percent and the tax on the transportation of property from 3 percent to 1½ percent. The President had recommended that the 3 percent tax be entirely eliminated, because it increases the cost of production and hence the prices of practically every commodity sold in this country. The transportation taxes discriminate against those geographical areas farthest removed from markets or sources of supply. A reduction of these taxes will benefit businessmen and consumers generally.

The reductions in the communications taxes provided in the bill would aggregate about \$125,000,000. This is approximately the amount of the reductions proposed to the Ways and Means Committee. However, the House bill spreads the reduction over both local and long-distance telephone use whereas the President recommended that it be confined to long-distance communications because these taxes enter into business costs and create competitive inequities.

The tax on telephone-toll messages would be decreased from 25 percent to 20 percent, and the tax on domestic telegraph messages cut from 25 percent to 10 percent, while the tax on local residential use would be reduced from 15 percent to 10 percent.

It will be noted that while the House bill includes all of the items in the President's program it also includes a number of others. These consist principally of a reduction in the admissions tax which would lose a little over \$200,000,000 and cuts in a number of manufacturers' excises which in total would lose another \$200,000,000. Moreover, some of the changes contained in the House bill raise the question of whether the rates adopted in all cases result in the proper alinement of related taxes. The Treasury staff will be prepared to present to the committee at your convenience materials bearing on this question and related matters.

REPLACEMENT REVENUE FOR EXCISE REDUCTIONS

The excise reductions would be approximately offset by replacement revenues obtained from closing tax loopholes and other administrative improvements together with the increase in the corporation income tax.

The internal improvements in the tax structure achieved in the House bill cover a large number of changes. These embrace essential reforms referred to in the President's tax message and other changes as well, which on the whole are desirable.

Business operations of charitable and educational organizations

Our tax laws have long recognized the principle that organizations operated for worthy public purposes should be encouraged by tax exemption. I am thoroughly in sympathy with this policy and fear that it is in danger of being discredited because a minority has abused it. The President called this general problem to the attention of the Congress, and the Treasury Department presented to the Committee on Ways and Means recommendations for handling it.

The House bill incorporated the remedies developed cooperatively by the Department and the staff of the Joint Committee on Internal Revenue Taxation. These provisions preserve the tax-free status of the legitimate activities of educational and charitable organizations and, at the same time, correct the abuses which properly have received

so much general condemnation.

Business operations of charitable and educational institutions clearly unrelated to their exempt functions generally would be subjected to the regular corporation income tax. This would apply to organizations now engaging in such unrelated business activities as the manufacture of food products, leather goods, vegetable oils, and the distribution of petroleum products. The bill would not tax their income from related activities, such as the operation of bookstores, dining halls, dormitories, or experimental farms, customarily carried on by educational and charitable organizations. Income from investments, such as interest, dividends, most rents, and royalties, would also continue to be exempt.

The bill would prevent these organizations from trading on their tax exemption where they acquire with borrowed funds properties subsequently leased to business concerns. The members of this committee are doubtless familiar with such arrangements. The transaction is profitable to exempt organizations since, in effect, it enables them to capitalize their tax exemption. It is also profitable to the lessee corporation because it enables it to share indirectly the nonprofit organization's tax exemption. The House bill corrects this discrimination against other investors, while safeguarding the existing exemption of educational and charitable organizations on

investment income derived entirely from their own funds.

The House bill also contains provisions for preventing private exploitation of charitable trusts and foundations for tax avoidance purposes. The institutions affected are privately controlled and do not obtain financial support from the general public. Some of them were established with a view to securing unintended tax benefits for the founders and members of their families by enabling them to retain control over business activities. The provisions of the bill can be expected to reduce the use of nominally charitable and educational organizations for the purpose of bestowing tax exemption on private interests.

Increased extension of the tax-exemption privilege by nonprofit organizations and charitable trusts and foundations threatens to make substantial inroads on the revenue. While the present revenue loss is not large, it will increase unless preventive measures are promptly adopted. The prospective annual loss, in the absence of effective remedies, would be in the neighborhood of \$100,000,000.

Life insurance companies

As you know, the President requested the Congress to correct the present inadequate taxation of life insurance companies on a permanent basis which would afford equitable treatment and at the same time safeguard the interests of policyholders. He endorsed steps that had been taken by the Ways and Means Committee to correct the situation for a number of recent years.

It should be our minimum goal to assess for those years in which no

tax was paid the amount called for by the House bill. The industry has the required resources and has been prepared to pay the amount in question. In 1948, for example, the increase in surplus was about 10 times the tax liability which would be imposed under the House bill for that year. For the smaller companies the ratio is even more favorable. There is evidence that at least some of the insurance companies have set up special tax reserves to cover the tax liabilities under this legislation which has been under discussion since 1947.

The investment income of life insurance companies now exceeds 1.7 billion dollars annually. Their investment assets, now aggregating more than \$60,000,000,000, comprise an important part of the total national wealth. Continued inadequate taxation of the life insurance industry would be detrimental to our economy and to the

long-run interest of the industry itself.

In view of the shortness of time for considering methods of permanent revision of the life insurance tax provisions this year, I recognize the need for extending the House-proposed stopgap formula to 1950. Such extension is included in the House bill. This would yield \$55,000,000. However, I believe that the Congress should make clear that this is intended only as a temporary solution. I urge active consideration of permanent revision. The Department is prepared to cooperate with the congressional committees in developing a solution to this problem.

Miscellaneous loopholes

The bill also contains technical provisions restricting the opportunities for tax avoidance. The most important of these in terms of the revenue to be gained is the correction of the present advantage permitted in the case of sales of business property. When such sales result in profit, the profit is taxed at the reduced rates allowed long-term capital gains; when the sales are unprofitable, the loss is allowed in full as an offset against ordinary income. This inconsistency and the resulting prejudice to the revenue can be eliminated either by treating both gains and losses as ordinary income and loss or by treating them both as capital transactions. The Ways and Means Committee adopted the latter solution but failed to act upon a related recommendation as to the tax treatment of sales of livestock.

Present court decisions have held livestock regularly culled from a dairy or breeding herd to be depreciable property used in trade or business and, thus, any gain resulting from their sale to be capital gain. In light of the regularity with which such livestock is sold, and since cattlemen or dairymen are permitted to deduct the cost of raising the livestock currently from ordinary income, it seems appropriate to treat the profits therefrom as ordinary income. The Treasury Department is continuing its litigation of this important question. However, I believe that legislation specifically classifying these profits as ordinary income is desirable, regardless of which solution your

committee adopts as to business property generally.

Other devices, such as the collapsible corporation and short sales of security or commodity futures, allow taxpayers unintended access to the more favorable rates of tax levied on long-term gains by permitting conversion of short-term gains or ordinary income into long-term gains. These devices have been curtailed by the bill.

There are a number of other loophole-closing provisions in the House bill dealing with specific situations resulting from court interpretations, unforeseen business practices, or the development of tax

avoidance techniques.

In most cases the loophole-closing provisions of H. R. 8920 will cope effectively with the tax avoidance against which they are directed and will raise about \$125,000,000. Additional loophole-closing provisions will be recommended at the appropriate time. The closing of technical gaps in the law is necessarily a continuing process, required to preserve the fundamental equities of taxation and especially important when tax rates have to be kept high. We cannot expect to preserve the confidence of taxpayers in our revenue system without continued vigilance and aggressive action to overcome technical defects in the law as they develop.

Withholding on dividends

The House adopted a provision which would extend income tax withholding to dividends at a flat 10 percent rate. While this provision was not specifically recommended by the President, it is a reform which the Department has carefully studied for some time with a view

to determining the advantages it would afford.

The available evidence indicates that there is considerable underreporting of dividends on individual income tax returns. A large part of this unreported dividend income is received irregularly, in small amounts, and probably is not reported by stockholders through inadvertence or careless bookkeeping. Noncompliance cannot be as readily uncovered by the Bureau of Internal Revenue under the present information return system as through a withholding system.

Withholding provides an economical method of securing substantially improved compliance in this area, as it has in the case of

wages and salaries.

Under the system proposed by the House bill, the corporation would withhold 10 percent from each dividend check. Stockholders would receive from the corporation either at the end of the year or after each dividend payment a statement, in any form convenient to the paying corporation, showing the amount of the dividends and the tax withheld. The stockholder would report his total dividends, including amounts withheld, on his tax returns and would claim credit against his total tax liability for the amount withheld on dividends. In those instances where the total tax withheld and other prepayments are larger than the total tax liability, the excess would be refunded.

The dividend withholding system adopted by the House differs in one important respect from the system now employed for wages and salaries. For the convenience of the corporation, the bill provides that information on the amount of dividends and tax withheld may be made available to stockholders either on a separate statement, on a check voucher, or as part of the information on the check itself. Although stockholders would be required to itemize on their returns the dividends they receive from each corporation and the amount of tax withheld, they may not be able to attach documentary proof of their claim for taxes withheld.

This method will be less effective than the one used for tax withholding on wages and salaries. Names and addresses on income tax returns will not necessarily be identical with those of record on the corporations' books. Since the matching of information forms filed by corporations with the lists attached to individual income tax returns would be costly and imperfect, I believe it would be desirable to provide for a stockholder's receipt—either once a year or with each individual payment—similar in form to the wage withholding receipt. Most taxpayers are already familiar with the operation of the withholding system as it applies to wages and the extension of this system would cause no confusion for the average dividend recipient. The existence of such receipts would permit the Government to make prompt refunds with more assurance that they were due.

It is estimated that the adoption of the withholding provision of

the bill would raise \$160,000,000 in a full year.

CORPORATION INCOME TAX

H. R. 8920 incorporates the first major change in the structure of corporation income tax rates since 1938, when the present limited form of graduation was adopted as a basis for providing reduced rates to small corporations. This method results in the present high "notch rate" of 53 percent required to bridge the gap between the lower rates applicable to incomes under \$25,000 and the general rate on corporations with income of \$50,000 or more. The present rate schedule is shown in table I.

Table I.—Details of present corporate income tax rate structure

Net income	Normal tax	Surtax	Com- bined normal	Cumulative tax to top of bracket		
			tax and surtax	Amount	Percent	
0 to \$5,000. \$5,000 to \$20,000 \$20,000 to \$25,000. \$25,000 to \$50,000. \$50,000 and over	Percent 15 17 19 31 24	Percent	Percent 21 23 25 53 2 38	\$1,050 4,500 5,750 19,000	21 22. 5 23 1 38	

erage 38 percent, as follows: Percent	The bracket rates on the first \$50,000 averag
	(a) Effective rate on first \$25,000
e ''notch")53	(b) Effective rate on next \$25,000 (the "ne
	(c) Total
ate of	(d) Dividing by 2, gives an average rate of

¹ Instead of applying the bracket rates, corporations with incomes above \$50,000 are taxed at the rate of 38 percent on their entire income.

The President urged the elimination of this method in order to reduce this discriminatory rate and encourage the expansion of

smaller corporations.

The House bill replaces the present complicated and repressive provision with a simple rate schedule. The proposed normal tax rate of 21 percent would be applicable to the profits of all corporations. In addition, a surtax rate of 20 percent would be levied on profits in excess of an exemption of \$25,000, making a combined normal tax and surtax of 41 percent on the amount of profits above \$25,000.

The changes in rates under the House bill would reduce the taxes of all corporations with net incomes between \$5,000 and about \$167,000

and would increase the taxes of corporations with net incomes of more than this amount. Over 170,000, or almost half of the taxable corporations, would have their taxes reduced. This should provide substantial encouragement to an important segment of our business population. Less than 19,000 large corporations, constituting only 5 percent of all taxable corporations, would be subject to higher taxes. The tax liabilities for corporations of different size under the proposed rates and present law are compared in table II and in chart 1*. The maximum tax reduction would occur at the top of the present "notch" area on net incomes of \$50,000 and would amount to \$3,500. The maximum tax increase would amount to three percentage points for the largest corporations.

Table II.—Comparison of corporation income tax liabilities under present law and under House bill, H. R. 8920

	Tax lia	bilities	Effective rates			
Net i	ncome	Present law	House bill	Present law	House bill	Increase (+) or de crease (-)
\$10,000 \$25,000 \$30,000 \$60,000 \$60,000 \$75,000 \$106,667 \$250,000		2, 200 5, 750 8, 400 19, 000 22, 800 28, 500 38, 000 63, 333 95, 000	\$1, 050 2, 100 5, 250 7, 300 15, 500 19, 600 25, 750 36, 000 63, 333 97, 500 405, 000 4, 995, 000	Percent 21.00 22.00 23.00 28.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00 38.00	Percent 21. 00 21. 00 21. 00 21. 00 24. 33 31. 00 32. 67 34. 33 36. 00 38. 00 39. 00 40. 50 40. 95 41. 00	Percent 0 -1.6 -2.6 -7.6 -5.3 -3.6 -2.6 0 +1.6 +2.5 +2.5 +3.6

The revised rate schedule, including the increased rate on larger corporations, would raise an estimated \$410,000,000 additional revenue. This is after allowance for the reduction in taxes amounting to about \$135,000,000, which would go largely to corporations with incomes of less than \$100,000.

As I indicated earlier in my statement, corporate profits are not far from 1948 record levels. This high level of profits has permitted corporations to pay dividends at a record rate and still retain about \$10,000,000,000 of earnings, or four times the amount of profits retained in 1929.

The bulk of corporation income is concentrated in the very large corporations. As shown in chart 2*, 5 percent of all corporations receive 81 percent of total corporation income. Recent profit trends for corporations of different size reveal an unmistakable improvement in the relative position of the largest corporations. These trends are shown in chart A.

Omitted in this exhibit.

CHART A

The strength of corporate business is also shown by the trend in its working capital position. At the end of 1949, the net working capital of all nonfinancial corporations amounted to nearly three times the 1939 figure. During this period liquid assets increased from less than one-half to three-fourths of their current liabilities. At the end of 1949, corporations held more than \$40,000,000,000 in cash and United States Government securities.

The President's recommendation for revision of the treatment of business losses is also carried out in the bill. Present law permits taxpayers to offset their losses in any given year against profits in the two prior years and to carry forward any remaining loss to be offset against income in the two succeeding years. The proposed revision would increase the carry-forward from 2 to 5 years and would reduce the carry-backs to 1 year. This would provide a total period of 7 years in which losses might be offset against profits as compared with the present 5-year period and thus reduce the tax advantage now enjoyed by stable as compared with unstable businesses.

More liberal loss offsets would be of particular benefit to new and small business and would promote their expansion. New concerns often experience losses or irregular earnings in their early history, since the development of a new business generally involves large initial costs which cannot be recovered immediately. Small business in general encounters great difficulties in withstanding the financial strain of hard times. Large firms on the other hand have a greater opportunity to average their own incomes because they are more likely to have diversified products and markets. Losses sustained

from one activity or locality can often be offset in the same year

against income from other sources.

The relief provided for small business by the revisions in the corporate rate structure and in the loss offsets accords with our objective to foster the development of this segment of the economy.

SUMMARY OF REVENUE INCREASES

The revenue-raising provisions of the bill would yield \$890,000,000 in a full year of operation and about \$525,000,000 in the fiscal year 1951, as follows:

	Full year	Fiscal year 1951
Corporation tax increase	\$410, 000, 000 55, 000, 000 100, 000, 000 125, 000, 000 160, 000, 000 40, 000, 000	\$160, 000, 000 125, 000, 000 109, 000, 000 127, 000, 000 5, 000, 000
Total	890, 000, 000	526, 000, 000

This total falls short of matching the excise reductions by \$120,000,000 on a full-year basis. You will note that the total includes \$40,000,000 resulting from the reduction in the interest rate on tax refunds. In my view this cannot be construed as an improvement in the tax structure or an administrative reform, and is an inequitable method of meeting our revenue requirements.

The figures I have given indicate the revenue that would be raised before allowing for certain provisions in the bill involving the loss of approximately \$50,000,000. I shall return to these undesirable

provisions later in my statement.

Exclusive of increased fiscal year collections which would result from the system of speeding up corporation income tax payments adopted by the House, the bill as it stands involves an estimated revenue loss of about \$170,000,000.

SPEED-UP OF CORPORATION TAX COLLECTIONS

The provision of the bill changing the system for installment payment of corporation income tax liabilities would substantially increase collections over a 5-year period beginning with the fiscal year 1951. This change does not alter the tax liabilities of corporations but merely

the timing of the tax payments.

The objective of the provision is to reduce the lag in corporate tax payments. At present, two-thirds of all taxable corporations, accounting for 97 percent of total corporation income tax liability, pay their taxes in quarterly installments during the year following the close of the taxable year. On the average, the corporation income tax is now collected 7 months after the close of the taxable year. When this provision becomes fully effective 5 years hence, this lag will be reduced to an average of 4 months.

Operation of the plan is shown in table III and chart B. It would gradually replace the present four-quarter payment privilege by a

system providing for payment of the full tax liability in the first two quarters following the end of the taxable year. However, this would be accomplished over a 5-year period during which each year the tax paid in the third and fourth quarters would be reduced and the tax paid in the first and second quarters correspondingly increased. When the two-installment system is fully effective, one-half the corporation income tax will be collected 6 months earlier than at present.

CHART B

The gradual transition to the more current system provided for in the bill is desirable to prevent impairment of the working capital position of corporations that have not set aside funds to meet their accrued tax liabilities. Larger corporations generally fund their tax liability currently by buying tax anticipation notes or marketable securities as profits are earned. Accelerated tax payment will not affect the operations of these corporations except to deprive them of part of the small interest income from their tax funds. The 5-year transition should be sufficient to permit smaller corporations to adjust their payments without hardship. Moreover, the Commissioner of Internal Revenue can make extensions of time if it should become necessary.

At the present level of corporate profits and under the rates of the House bill, this speed-up in collection will increase fiscal year 1951 tax receipts by nearly \$800,000,000 and receipts in each of the four

succeeding fiscal years by a somewhat larger amount.

This provision, in my opinion, is a desirable tax reform. It will bring corporations closer to the current payment basis which applies to business income of individuals, and will make corporation income tax revenue more promptly responsive to changes in tax rates or economic conditions. However, I should like to emphasize that the speed-up in corporate tax payments is not a revenue-raising measure and therefore cannot be regarded as an offset to the revenue lost from excise tax reductions.

REVISIONS IN THE BILL

Some provisions of the bill conflict with sound taxation, and I urge you to consider their modification or deletion. These include the further expansion of already excessive percentage depletion allowances and revisions affecting the estate tax.

Percentage depletion

The most objectionable provision of the House bill is the extension of percentage depletion to some 20 types of nonmetallic minerals not covered by present law and the increase in the rate of percentage

depletion for coal from 5 to 10 percent of gross income.

This action represents a continuation of the movement for expanding depletion allowances which gathered momentum under the guise of wartime necessity. In 1942, when percentage depletion was first granted to ball and sagger clay, producers of other clays complained of discrimination and inequitable taxation. So in later years percentage depletion was extended to bentonite and china clay. The House bill now proposes further extension to refractory clays, fuller's earth, fire clays, and brick and tile clays. Such extension would give rise to further claims of discrimination by producers of miscellaneous clays and in turn by producers of synthetic and reworked materials competitive with clay.

The basis for these allowances is so vague that it can be readily applied to practically every situation. Each industry, for example, can argue that it is essential to national defense. The last war showed conclusively that practically every industry is essential to an economy devoted to war. After one mineral has been given favorable treatment, no end is in sight to the list of minerals that can plead for inclusion on the ground of competitive inequity. The special concessions now in the law create serious competitive discriminations because of unreasonable disparities in the percentage depletion rates. There is even greater discrimination between the groups favored with

concessions and other industries and classes of taxpayers not so favored. In consequence, persistent pressure may be expected to obtain equality by raising the lower rates to the higher level and by extending benefits to other industry areas. The bill as passed by the House of Representatives goes so far as to concede special tax relief to those who strip hillsides of gravel. This could be justified because similar treatment is to be given to those who scoop sand off the seashore.

Because each group feels that special tax exemption can be equally justified in its case as a means of fostering the growth of that particular industry, the result is the development of a system of concessions which is not only incongruous in a sound and equitable tax system but which is also ill-suited for a sound national policy of mineral

development and conservation.

Taxpayers in the favored industries, and particularly a few large corporations, benefit at the expense of the rest of the business community. The advantage is defended on the grounds of special risks in the oil industry which, incidentally, is regarded as a favored investment by conservative investment trusts. A businessman desiring to invest in a new product might incur greater risk but is limited in determining his taxes to the recovery of his actual investment costs over the life of the property. The allowance for tax purposes of deductions many times the investment that may be made in oil properties means that many other types of businesses are now paying more taxes than they should in order to enable the Government to recoup the tax leakage from percentage depletion.

Improvement of the equity and strength of the tax system requires that we definitely reject the undesirable extensions made in this bill and move toward elimination of these special privileges. The high level of revenue requirements which necessitates even the retention of some onerous excise taxes makes this improvement the more urgent. Consequently, I wish to urge upon your committee the changes which were proposed to the Ways and Means Committee which would carry out the recommendation of the President that the more excessive special depletion allowances permitted under present law be reduced.

This would reduce the revenue loss from these provisions by over \$200,000,000. The staff is prepared to present to the committee the results of the Department's study of this subject, covering the amount

of the benefits and their effect on the economy.

Estate and gift taxes

Another conspicuous weakness of the House bill is the omission of the long overdue estate and gift tax revisions. The need for strengthening these taxes in the revenue system is widely recognized. Such a program has been repeatedly urged by the administration, most recently by the President in 1948 and 1949 and again this year. The revisions proposed in these taxes would make an important contribution to additional revenue.

The present weakness of the estate tax and the failure of this levy to keep pace with the income tax are clearly illustrated in charts C to F. The estate and gift taxes are now weak because (1) the imposition of separate, unrelated taxes upon property disposed of during life and at death permits undue escape from taxation, (2) property left in

trust is accorded extensive advantages over property left outright, and (3) changes made in 1948 result in excessive exemptions and unreasonably low effective rates for married persons. The program which was outlined to the Ways and Means Committee would correct most of these defects and would restore the revenue from these taxes to a level somewhat above that reached prior to the 1948 act.

The House bill makes no provision for a general overhauling of the estate and gift tax structure. Moreover, it contains two provisions

which are undesirable.

One of these would weaken the estate tax law by excluding certain gifts made in contemplation of death from the estate tax base. As I pointed out to the Ways and Means Committee, the best over-all solution of the contemplation of death problem would be to integrate the estate and gift taxes into a single transfer tax. Pending a review by your committee of the proposal for an integrated tax, I urge that the House amendment to the contemplation of death provision not be adopted.

Another objectionable provision in the bill would exempt from income tax, in cases where a closely held corporation is the principal asset in the estate, the dividends paid by the corporation to the estate up to the amount of liability for death taxes. While this is intended to meet a special problem, the solution proposed would invite extensive tax avoidance. It would be preferable to deal with this problem on a more limited basis or defer it until the broader question of estate tax revision is considered.

Point IV tax proposals

The House bill contains no legislation carrying out those parts of the President's tax recommendations which derived their impetus from the Point IV Program. These recommendations relate to the tax treatment of income derived abroad and are designed to remove tax deterrents to the movement of private investment and technicians to foreign countries.

One of these recommendations would treat the income of foreign branches established by domestic corporations as the tax laws now treat similar income obtained through foreign subsidiaries. The tax would be postponed until the foreign earnings are brought home. Such a provision would eliminate tax differentials as a factor in determining the organizational form of a foreign business operation and would afford greater flexibility to those contemplating investments abroad. It would also permit reinvestment of foreign earnings abroad without current tax consequences.

A corporation receiving dividends from a foreign subsidiary is now permitted a credit for the income taxes paid abroad by the subsidiary. This provision helps to eliminate international double taxation. However, it applies only to a domestic firm which owns a majority of the voting stock of the foreign corporation. Consequently, when two or more U. S. firms undertake to share the risk of a foreign enterprise, only one of them, at most, can be safeguarded against double taxation. One of the Department's proposals in this field would lower the majority control requirements so that ownership of any substantial interest in a foreign corporation would qualify a U. S. firm for the foreign

tax credit. This would encourage joint ventures abroad, and would facilitate the participation of local capital in such enterprises.

There is need also for liberalizing the foreign tax credit provisions as they apply to firms that derive income in one foreign country but incur an offsetting loss in another and for extending it to the estate tax.

The scope of the exemption now accorded individuals on income earned abroad requires adjustment. The present exemption begins to apply only with the first full taxable year of bona fide foreign residence. There is no sound reason why the earnings of the first 11 months, say, of an individual's foreign residence should be taxed when it is clear that it is part of long-term employment abroad. Accordingly, the Department has proposed that, once an individual qualifies for exemption as a foreign resident for a taxable year, the exemption should apply retroactively to his earnings throughout the entire period of his stay abroad.

In presenting my comments on the House bill I have undertaken also to provide your committee with the background of the program

which the President asked the Congress to consider.

The House bill makes an important contribution toward meeting the objectives of the President's program presented in January. However, it does not go far enough and should be improved. I earnestly urge you to consider the changes which would bring the bill more in accord with our present requirements.

I want to say once more that I am sure that the future course of world events is very much in your minds, as it is in mine. Increased disturbance to world peace would involve increased demands upon us

which would require additional fiscal measures.

The effect of recent international developments on our expenditures will become clearer as events unfold. Therefore, if during the course of your consideration of this legislation it appears that we are confronted with a substantial increase in defense expenditures and strains on the economy, I shall not hesitate to so advise you. As the President indicated in his tax message, we must be ready to gear changes in the revenue laws to the needs of our economy.

These are times when our political and economic institutions are challenged and we should not hesitate to protect and perfect them. A healthy economy, a sound fiscal and tax policy, fair and adequate taxation are all parts of our pattern for national strength and world

leadership.

Exhibit 22.—Letter of the President, July 25, 1950, to the Chairman of the Senate Finance Committee recommending prompt enactment of an interim revenue measure

My Dear Mr. Chairman: The increased military appropriation requests transmitted to the Congress on July 24, 1950, together with other requests I shall transmit at a later date, will entail sharply increased Federal expenditures. We embark on these enlarged expenditures at a time when the Federal budget is already out of balance. This makes it imperative that we increase tax revenues promptly lest a growing deficit create new inflationary forces detrimental to our defense effort.

We must make every effort to finance the greatest possible amount of needed expenditures by taxation, and we must design taxation methods which prevent profiteering and distribute the tax burden fairly among the different groups of

our people.

I appreciate that the development of a comprehensive revenue program adequate for our present needs will require careful congressional consideration. wartime experience will need to be reviewed and alternative approaches explored. Under the most auspicious circumstances, such a comprehensive tax program could not be completed for some time.

In the present situation, however, speed is of the essence and delay would be

costly.

I recommend that, as an interim revenue measure, action should be taken immediately to revise and enact the tax bill now pending before your Committee, so as to increase tax collections substantially for the taxable year 1950. cally, I suggest that the revenue-raising provisions of the pending bill be retained and supplemented by increases in the corporate and individual income tax rates. This could be done without interfering in any way with the development of a more comprehensive revenue program as soon as practicable.

Three adjustments would be required in the pending bill:

First, to eliminate the excise tax reductions and other revenue-losing provisions, but retain the loophole-closing, dividend withholding, and life insurance company provisions.

Second, to adjust the revised corporate rate structure contained in the pending bill by increasing the normal corporate rate from 21 to 25 percent. Taking into account the 20 percent surtax contained in the present bill, and the \$25,000 exemption from surtax, this would result in a 25 percent tax on the first \$25,000 of a corporation's income, and a 45 percent tax on the balance.

Third, to increase individual income tax rates to the "tentative" levels adopted in 1945, by removing the reductions from those levels made in 1945 and 1948. This would leave unchanged the income-splitting provisions of present law, and the present personal exemptions of \$600 per person. These rate schedules are familiar to the Congress, since they were involved in the consideration of the tax reductions adopted in 1945 and 1948.

The increased corporate income tax rates should be made applicable beginning with 1950 corporation incomes, as the pending bill would do. With respect to individual income taxes, the increased rates should be applicable beginning with one-quarter of each taxpayer's 1950 income. This would require an increase in the withholding rate from the present 15 percent to 18 percent, beginning with the last quarter of 1950.

These adjustments in the pending tax bill would increase the Government's revenue, on a full-year basis, by about \$5 billion at present income levels. Clearly, this will not meet our long-run revenue requirements. As an interim step, however, it will have a timely effect on tax revenues and our financial preparedness. It will serve to restrain inflationary forces generated by increased defense expenditures. Without this action, we would face very substantial deficits before any additional taxes could begin to be collected.

In addition to increasing revenues, enactment of the revenue legislation I am commending would improve the soundness of our tax system. The loopholerecommending would improve the soundness of our tax system. closing provisions of the pending bill will strengthen the tax structure and make it more equitable. This is particularly desirable in view of the higher tax rates in prospect, which would surely increase the incentive to exploit present tax loopholes. Moreover, the corporate income tax structure will be substantially improved by eliminating the present "notch" rate, which bears heavily on smaller corporations. This will moderate the effect of increased rates on business incentives.

I believe that prompt interim legislation along these lines will provide tangible evidence of our determination to conduct our national finances in a sound manner, consistent with the national effort we are required to make. It will also be a major step toward preventing inflation during the time necessary to develop a carefully balanced tax program suited to our longer-range requirements. transmit further recommendations to the Congress concerning a more comprehensive tax program when we have additional information on the extent of our needs.

I am grateful for your cooperation in working out arrangements for the prompt consideration of these interim proposals. I earnestly hope that they will be favor-

ably acted upon by the Congress at an early date.

I am sending a copy of this letter to the Chairman of the Ways and Means Committee of the House of Representatives, who, as you know, participated in working out the procedure for prompt action recommended in this letter. Very sincerely yours,

HARRY S. TRUMAN.

Exhibit 23.—Statement of Secretary of the Treasury Snyder before the Senate Finance Committee, August 2, 1950, on the President's recommendation for the enactment of interim tax legislation

I am glad to have this opportunity to discuss with you the President's recom-

mendation for the prompt enactment of interim tax legislation.

In the four weeks since I appeared before your Committee in connection with your consideration of H. R. 8920 the events in Korea and the messages of the President have demonstrated to every citizen in the Nation that both our expenditures and our revenues will have to be very much greater in the period ahead than we had formerly anticipated. Since July 11, when I recommended to your Chairman that action on the tax bill be suspended, the President has transmitted a series of messages to the Congress outlining our defense requirements for the immediate future and the measures which are urgently needed in relation to them. In these messages, the President has asked for over \$15 billion of additional appropriations to be available now for purposes of defense. Concurrently, he has recommended interim revenue legislation which will immediately increase Federal tax receipts by \$5 billion on an annual basis.

As the President has emphasized, the additional revenue asked for at this time is only a first step in the necessary adjustment of our revenue system to bring it more closely in line with current and prospective outlays needed for defense against unprovoked and unlawful attack upon the rights and territories of peaceful people. This must be followed as soon as possible by a more comprehensive program to increase very substantially the productiveness of our revenue system and to adjust the added tax burden on a basis which will be fair and equitable to

all of our citizens.

With respect to the President's program, I should like to make it clear that the revenue measures which are urged for immediate enactment represent the minimum requirements of financial preparedness at this time. As you know, the finances of the Government were not balanced at the beginning of the Korean crisis. Our deficit for the fiscal year 1950 amounted to over \$3 billion and a deficit of approximately \$5 billion was in prospect for the fiscal year 1951. In times like the present it is not only desirable, it is vital to the entire defense effort that the finances of the Government be placed in the strongest possible position for meeting the demands which will be made on them for defense against unscrupulous destroyers of peace. This program is an essential first step—though it is a first step only—toward utilizing our revenue system to strengthen the economic defenses of the Nation.

Besides improving the fiscal position of the Government, the increase in our revenues at this time will serve another important purpose. As the President has pointed out, it will aid in restraining inflationary forces generated by increased defense expenditures. Every person in the Nation is aware of the primary importance of these objectives. Now is the time to take action toward maintaining an environment which will discourage, rather than encourage, the growth of inflationary pressures. Larger tax payments from current incomes—both business and personal—are an essential feature of an effective anti-inflationary program. I share the confidence of the President that every citizen stands ready to make this

necessary contribution to our national security.

As I emphasized in my appearance before your Committee on July 5, both corporations and individuals are in an exceptionally favorable financial position at the present time. Personal incomes this year, excluding the insurance dividends to veterans, have already risen to a level close to the peak reached in the last part of 1948. Corporate profits are also running near the 1948 record totals. Industrial production in June surpassed the previous peacetime high of November 1948 and civilian employment passed 61 million in June, a record high for the month. The whole economy, in fact, appears to be surging forward at an accelerated pace and the need for increased output for military purposes will intensify this trend

the need for increased output for military purposes will intensify this trend.

Under these circumstances and in view of the increasing evidence during recent weeks that inflationary pressures are already having a strong impact on the price structure, we cannot fail to make an earnest effort to pay for a larger proportion of current governmental expenditures out of current incomes. In order to do this it is essential that legislation increasing taxes be passed promptly. A major tax program would consume a substantial period of time and could not result in an immediate increase in tax payments. Present inflationary developments could not be curbed by the enactment of taxes after the crucial transition period has passed, regardless of how high they might later be raised.

The development of a tax program fully adequate to meet the demands of a continued mobilization effort will require consideration of many basic problems. Our present effort should preserve freedom of action with respect to these problems. The Congress will later wish to re-examine our wartime experience with a view to devising the most appropriate methods for dealing with the complex problems of excessive profits, measures to stimulate defense production, and the interrelationships between taxation and direct economic controls. These problems raise some of the most difficult issues in the field of taxation. It will be necessary to have a fuller understanding of the future course of our mobilization plans in order to resolve them in a manner which will make the maximum contribution to the effectiveness of economic programs.

The interim tax measure recommended by the President and developed in cooperation with the congressional leadership is based upon a careful evaluation of all of these elements in the present situation. The President has recommended that H. R. 8920 serve as a basis for the desired legislation, with the following

First, that the excise tax reductions and other revenue-losing sections in the bill now pending before your Committee be eliminated, but that the provisions for closing loopholes, for instituting a withholding tax on dividends, and for

adjusting the taxation of life insurance companies be retained,

Second, that the corporation income tax rates in the pending bill be raised by
an additional four percentage points, effective for 1950 incomes, and

Third, that the pending bill be amended to include increases in individual
income taxes by removing one-quarter of the reductions from "tentative" tax for 1950 incomes, and by eliminating such reductions entirely beginning in 1951.

As the President has stated, these measures together would raise approximately \$5 billion of revenue on a full-year basis. It is fortunate that when the need for additional revenue became apparent your Committee and the Committee on Ways and Means of the House of Representatives had already laid the ground-work for the program now recommended by the President. The careful consideration which the pending tax bill has already received has prepared the way for the measures which must now be taken to adjust our revenue system to the new requirements of national defense. The changes in the pending bill to incorporate these revisions could be made with a minimum of drafting problems for the Committee to consider.

The details of the three major proposals of the President with respect to revenue measures which are recommended for immediate enactment follow.

1. THE ELIMINATION OF REVENUE-LOSING PROVISIONS AND CLOSING OF LOOPHOLES

The need for revenue at this time requires the retention of all present revenue This means that the excise taxes now in existence should be continued. In urging the Committee to eliminate the excise reductions provided in the bill, I should not like to leave the impression that these taxes in their present form are a desirable and necessary permanent feature of our revenue system. Congress undertakes a comprehensive tax program to meet increased defense needs, consideration can be given to the proper composition of excise taxes.

For the purpose of immediate legislation, however, two extensions of existing excises should be considered in the interest of competitive equality. One is the extension of the present tax on household refrigerators to deep-freeze units, a provision already incorporated in the pending bill. The second is the extension of the 10 percent radio tax to television sets, as I previously recommended. Television now is a strong competitor with alternative forms of entertainment, such as the radio, motion pictures, and professional sporting events, all of which are subject to Federal excise tax.

In my statement to your Committee on July 5, I called attention to certain other revenue-losing provisions of the bill which are highly objectionable on Present circumstances strengthen the case for removing these equity grounds.

provisions from the bill.

As the President pointed out, the loophole-closing, dividend withholding, and life insurance provisions of the bill should be retained. The retention of the loophole-closing provisions of the bill is particularly desirable in view of the higher tax rates which are certain to increase the exploitation of tax loopholes. We should not encourage the opportunities for tax avoidance that have been brought to the attention of your Committee. Necessary technical changes in these pro-

visions to meet the problems that have been raised will be presented by the

Treasury staff.

The provisions of the bill for the taxation of the life insurance industry become increasingly more important as other segments of the economy are required to pay higher taxes.

Withholding on dividends will be particularly helpful since it will assure more effective tax compliance at a time when the rising level of taxation necessitates

more intensive enforcement efforts.

The significance of these measures extends beyond their immediate revenue effect. If imperfections are permitted to survive in our tax laws, increasingly larger amounts of revenue will be lost. Inequities under present circumstances would tend to reduce taxpayer morale.

The full-year revenue effect of the loophole provisions of the pending bill, and

the excise adjustments, is estimated at more than \$500 million.

2. CORPORATION INCOME TAX

The second element in the President's interim revenue program is an increase in the corporation income tax of 4 percentage points above the rates contained in the pending tax bill. The corporate normal tax included in the House bill would be increased from 21 percent to 25 percent which, with the 20 percent surtax provided in the bill, would result in a combined top rate of 45 percent (table I). It is proposed that these increased rates apply to the 1950 incomes of corporations as the present bill provides.

Table I.—Corporate income tax rates under present law and the House bill (H. R. 8920) compared with the proposed rates

	Present law			House bill			Proposed rates		
Net income	Nor- mal tax	Surtax	Com- bined rates	Nor- mal tax	Surtax	Com- bined rates	Nor- mal tax	Surtax	Com- bined rates
0 to \$5,000 \$5,000 to \$20,000	15 17	Percent	21 23	Percent	Percent	Percent 21	Percent 25	Percent	Percent 25
\$20,000 to \$25,000 \$25,000 to \$50,000 \$50,000 and over	19 31 24	6 22 14	25 53 1 38	21	20	41	25	- 20	45

¹ Instead of applying the bracket rates, corporations with incomes above \$50,000 are taxed at the rate of 38 percent on their entire income.

The recommended increase in corporation tax rates would add, on an annual basis at calendar year 1950 income levels, about \$1 billion of revenue to the amount provided under the pending bill, representing a total increase in corporate

tax yield over present law of \$1.5 billion.

The tax increases as compared with present law would vary at different income levels as a result of the desirable substantive changes made in the corporate rate structure by the House bill. The bill eliminates the "notch" provision which, as the Committee knows, has existed since 1938 for the purpose of making the transition from the reduced rates provided for small corporations to the flat rate applicable to the total income of all other corporations. The 53 percent "notch" rate in the present law has long been recognized to be an obstacle in the path of small, growing corporations. If this method of transition were left unchanged, the corporate rate increase in the bill with the additional increase recommended by the President would require raising the "notch" rate to a highly inequitable level. The elimination of the "notch" under the bill provides in effect a flat corporate income tax rate with a \$25,000 exemption from surtax, which continues to accord incentive tax treatment to small corporations.

The combined effect of the higher rates and the elimination of the "notch" is a relatively small increase in tax for small corporations, incidental reductions for corporations in and immediately above the "notch" area, and a general increase

of 7 percentage points for larger corporations. As shown in chart A and table II, the effective rates of corporation income tax liabilities under the President's recommendation would be 4 percentage points higher at all levels than under the pending bill.

CHART A

Table II.—Comparison of corporation income tax liabilities under present law, the House bill (H. R. 8920), and proposed rates

Net income	Tax liabilities			Effective rates			Increase (+) or decrease (-) in effective rates as com- pared with present law

\$5,000	5, 750 8, 400 19, 000 22, 800 27, 143 28, 500 38, 000 47, 500	\$1, 050 2, 100 5, 250 7, 300 15, 500 19, 600 24, 286 25, 750 36, 000 46, 250 63, 333 97, 500 405, 000 4, 095, 000	\$1, 250 2, 500 6, 250 8, 500 17, 500 22, 000 27, 143 28, 750 40, 000 51, 250 70, 000 107, 500 445, 000 4, 495, 000 44, 995, 000	Percent 21. 00 22. 00 23. 00 28. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00 38. 00	Percent 21. 00 21. 00 21. 00 22. 00 31. 00 32. 67 34. 00 34. 33 36. 00 37. 00 38. 00 39. 00 40. 50 40. 95 41. 00	Percent 25. 00 25. 00 25. 00 25. 00 36. 67 38. 00 41. 00 42. 00 44. 50 44. 95 45. 00	Percent 0 -1.00 -2.00 -3.67 -7.00 -5.33 -4.00 -3.67 -2.00 -1.00 0 +1.00 +2.50 +2.95 +3.00	Percent +4.00 +3.00 +2.00 +.33 -3.00 -1.33 0 +.33 +2.00 +3.00 +3.00 +4.00 +5.00 +6.50 +6.50 +7.00

The major increases would be paid by 41,000 large corporations. These corporations, as shown in chart B, account for 88 percent of taxable corporate net income, although they represent 11 percent of all taxable corporations. As shown in chart C, those with net incomes above \$71,400 would pay, on the average, 16 percent more tax than under present law. Smaller increases would be paid by the 296,000 corporations with incomes under \$31,250. The maximum increase for this group of smaller corporations would be \$500, payable by corporations with net incomes between \$20,000 and \$25,000. The increase for a corporation with \$5,000 net income would be \$200.

Because of elimination of the "notch," about 33,000 corporations with incomes

Because of elimination of the "notch," about 33,000 corporations with incomes between \$31,250 and \$71,400 would have a net reduction in tax. The maximum reduction would amount to \$1,500 and would occur at the top of the present

"notch" area on net incomes of \$50,000.

CHART B

*Estimated

CHART C

*Computed from unrounded figures.

It will be recalled that the President recommended in January 1950 an increase in the corporate rate to 42 percent. The Ways and Means Committee began hearings on February 3, 1950, and the pending bill, as passed by the House of Representatives, adopted a corporate rate of 41 percent. Therefore, businessmen have had reason to anticipate an increase in the tax on corporate profits effective as of January 1, 1950.

When the House bill was passed, corporate profits were estimated at an annual rate of \$31 billion and the indications were that the full-year rate would be somewhat higher. Profits at this level would have permitted corporations, after the increased taxes under the House bill, to pay record dividends and to retain larger profits than last year. Moreover, current prospects for corporate profits in 1950 are steadily improving.

In connection with the application of the proposed corporation tax increases to 1950 incomes, the Committee will be interested in the record of past changes in the corporation income tax (table III). Beginning with the corporation tax in 1909, the Congress has generally made corporate rate changes applicable to the income of the calendar year in which the legislation was enacted, even in those years in which legislative consideration of the corporate tax increase was not completed until the closing months of the year. In two instances (the Revenue Act of 1918, enacted February 24, 1919, and the Revenue Act of 1926, enacted February 26, 1926) the tax increases were made effective as of January 1 of the preceding year.

Table III.—Date of enactment and effective date of changes in corporation income taxes under Federal tax laws, 1909 to date

1938	Increased rates	May 28 1938	Jan.	1, 1938	
	do	June 25, 1940	Jan.	1, 1940	
1940 (2d)	do	Oct. 8, 1940	Jan.	1, 1940	
1941	do	Sept. 20, 1941		1, 1941	
1942	dodo	Oct. 21, 1942	Jan.	1, 1942	
1945	Reduced rates	Nov. 8, 1945	Jan.	1, 1946	

¹ Applicable to taxable year 1929 only.

The present schedule for payment of accrued corporation taxes makes it essential that the proposed increases apply to 1950 incomes. Taxes on 1951 incomes will not be payable until 1952 and will be fully collected only by December 15, 1952—almost 2½ years hence.

Further changes in the corporate tax area can be made with respect to 1951 incomes after full consideration of the various alternatives and in the light of subsequent developments in the economic situation and expenditure requirements.

3. INDIVIDUAL INCOME TAX

The third element in the President's interim revenue program is an increase in the rates of the individual income tax. The President recommended that this be accomplished by removing the present percentage reductions from "tentative" tax provided for 1948 and 1949, but that only one-fourth of these reductions be removed in computing tax liabilities for the current year 1950. The increase in tax on 1950 incomes would be coordinated with an increase in withholding, effective October 1 of this year.

You will recall that in 1945 this Committee developed an income tax schedule which was 3 percentage points lower in all brackets than the wartime rate schedule enacted in 1944. In addition, your Committee provided for a flat 5 percent

reduction from these rates in determining the final liability.

When income taxes were again reduced in 1948, the general 5 percent reduction was replaced by a series of reductions amounting to 17 percent on the first \$400 of tentative tax; 12 percent between \$400 and \$100,000; and 9.75 percent for tax in excess of \$100,000. The net effect of this complex schedule is to produce rates rising from 16.6 percent in the first bracket to 82.1275 percent in the highest (table IV).

Table IV.—Individual income tax rate schedules

PROPOSED RATES FOR 1950 AND 1951 COMPARED WITH THE REVENUE ACTS OF 1944, 1945, AND 1948

Note.—The rates under the proposed change for 1950 have been computed by rounding the one-fourth reduction from tentative tax. Reductions from tentative tax of exactly one-fourth would result in the following changes: The 17 percent reduction would be reduced to 12.75, 12 percent to 9, and 9.75 percent to 7.3125. These reductions were rounded to 13 percent, 9 percent, and 7 percent, respectively, in computing the 1950 bracket rates in table IV and the effective rates in table V. The maximum difference in tax due to rounding would be relatively small.

Under the President's proposal, the percentage reductions would be eliminated for 1951 and the "tentative" rates would become the actual rates. In terms of effective rates, the increases over present law would be 3.4 percentage points at the top of the lowest tax bracket and about 9 percentage points in the highest bracket (table V).

¹ After reductions from tentative tax.

² Subject to the following maximum rate limitations: Revenue Act of 1944, 90 percent; Revenue Act of 1945, 85.5 percent; Revenue Act of 1948, 77 percent; proposed rates for 1950, 80 percent; proposed rates for 1951, 90 percent.

The proposed tax liabilities applicable to 1951 incomes are shown in charts D and E, compared with those in effect since 1944 when the highest wartime rates were enacted. Under the President's recommendation, the split-income provisions and the increase in exemptions enacted in 1948 would be retained. persons filing joint returns will continue to benefit from having twice as much income taxable at the lower rates as they did prior to the 1948 act.

Chart D shows the tax liabilities for single persons with different incomes. For a single person with a net income of \$5,000, the tax would be increased from 16.2 percent under present law to 18.9 percent under the proposal. This compares with the tax under the 1944 act of 22.1 percent. At the \$25,000 level, the present effective rate of 34.4 percent would be raised to 39.2 percent under the proposal, which compares with 42.4 percent would be raised to 39.2 percent under the

proposal, which compares with 42.4 percent under the 1944 act.

Chart E shows that for married persons the proposed rates would be substantially below those in effect at the end of the war. On a net income of \$5,000, a married person with two dependents now pays a tax of about 8.6 percent. the President's proposal, this would be increased to 10.4 percent for 1951 or about two-thirds of the tax under the 1944 act. At \$25,000, where income-splitting gives about the largest relative advantage, the effective rate would be increased from 21.9 percent to 25.1 percent. The proposed tax would then be 13.7 percentage points lower than the highest wartime tax of 38.8 percent at this

Under the President's recommendations, less than 5 percent of taxpayers, mostly single persons, would actually pay higher taxes than they did under the

The proposal would increase tax liabilities of individuals by about \$700 million on 1950 incomes and by \$2.9 billion on 1951 incomes. About 55 percent of this additional revenue would come from taxpayers with net incomes under \$5,000. As shown in chart F and table VI, this group now accounts for 91 percent of all taxpayers and for 69 percent of net income of taxable individuals before exemptions. The remaining 45 percent of the revenue would come from those with incomes above \$5,000, who represent 9 percent of all taxpayers and receive 31 percent of the net income of taxable individuals.

Note.—Figures are rounded and will not necessarily add to totals.

¹ Married couples are counted as two taxpayers whether or not both spouses have income.

As a result of the large concentration of income below the \$5,000 level, a substantial part of income tax revenue must of necessity be obtained from this group. Moreover, a relatively small increase in the rate in the lowest brackets contributes more revenue than a larger increase at the higher income levels. For example, a 1 percentage point increase in the first bracket rate is equivalent in revenue to a 3 percentage point increase for all other brackets together (table VII).

The method of increasing individual income taxes proposed by the President has been selected with regard for simplicity in the face of the need for prompt action. It will provide substantial revenue on an equitable basis. The rate schedule is contained in the present law. The Congress is familiar with the schedule and with the development of the reductions from tentative tax provided in the 1945 and 1948 acts. The President's recommendation provides simply for eliminating one-quarter of these reductions for 1950 incomes and the entire reductions for 1951.

The proposed revision in individual income taxes will involve no complex additional computations. In contrast, a flat percentage increase in tax liabilities combined with the existing three separate tentative reductions would make the present computations even more complex. The introduction of a new rate schedule would require consideration of issues which can best be deferred until a more comprehensive program is considered.

more comprehensive program is considered.

The adoption of the President's proposal will permit the adjustment of the withholding rate applicable to wages and salaries in excess of personal exemptions from 15 percent to 18 percent beginning with October 1 of this year. The new withholding rate, after allowing for the standard deduction, would roughly account for the full increase in tax proposed for the calendar year 1950 for those

subject to withholding.

Prompt enactment of legislation is necessary for the Bureau of Internal Revenue to institute withholding at the higher rate. New instructions and withholding tables will have to be printed and distributed to over 3 million employers in time to be used by October 1. Taxpayers who pay tax in four quarterly installments will also have to be provided with new forms to adjust their final quarterly payments.

4. SUMMARY OF REVENUE FROM PRESIDENT'S PROGRAM

The following summary indicates the revenues to be obtained under the President's recommendations on a full-year basis and for the fiscal year 1951. The combined effect of the three-point program is to increase liabilities over present law by nearly \$5 billion on an annual basis. About \$2.9 billion of this increase would be from the increase in individual income taxes, \$1.5 billion from the increase in corporation rates, and over \$500 million from the loophole-closing provisions and excise tax adjustments.

Table VIII.—Summary of the estimated revenue effect of the proposed interim tax legislation

4 Does not represent, for the most part, an increase over present revenues. The estimate represents the long-run revenue loss estimated to occur if provisions are not adopted.

The fact that this is an interim program should be emphasized. ship between the proposed increases in liabilities can be reconsidered when a more comprehensive program is developed with appropriate attention to other sources of revenue. The enactment of H. R. 8920 revised as recommended will adjust our revenue structure in the direction necessary to discharge the responsibilities we have undertaken to meet. In doing this, an immediate substantial contribution will be made to current revenue needs, and the possibilities of inflationary spending from 1950 incomes will be reduced.

I should like to leave one concluding thought with you. The three-point tax program placed before you by the President to meet our immediate requirements was developed in the conviction that our people are prepared for the sacrifices and responsibilities which the defense of our Nation and of our institutions demands. I feel sure that they want to begin now to prepare for meeting the expenditures that lie ahead. I know that you will consider the President's program in this

spirit.

¹ Estimates affecting income taxes are based on levels of income estimated for the calendar year 1950 and take into account interrelated effects of changes in corporation and individual income tax liabilities. Estimates affecting estate and gift taxes and excise taxes are based on levels of income for the fiscal year 1951.
² Provisions of the revenue bill of 1950 (as passed by the House of Representatives June 29, 1950) are assumed to have an effective date as provided by the bill. It is also assumed that the increase in tax on television sets and deep-freeze units will be effective September 1, 1950, and that the increase in corporation income tax rates will be effective with taxable years ending on or after December 31, 1950. The higher individual income tax withholding rate is assumed to take effect October 1, 1950.
³ The individual income tax provisions affecting calendar year 1950 are estimated to yield \$703 million.

EXHIBITS 243

Exhibit 24.—Miscellaneous revenue legislation enacted during the fiscal year 1950

EIGHTY-FIRST CONGRESS, FIRST SESSION

Public Law 240, August 17, 1949, by adding a new section 3182, exempted certain volatile fruit flavor concentrates from the tax on liquors imposed under subchapter E of Chapter 26 of the Internal Revenue Code.

Public Law 241, August 17, 1949, by amending section 2 of the act of December 5, 1942, extended to July 1, 1951, the existing privilege of free importation of bona fide gifts from members of the armed forces of the United States on duty

abroad.

Public Law 261, August 23, 1949, amended sections 3150, 3152, 3157, 3158, and 3159 of the Internal Revenue Code to permit the use of stamp or metering machines as an alternative means of paying the tax on fermented malt liquor, to authorize the bottling of malt liquors on brewery premises and to provide for

tax payment on its removal.

Public Law 271, August 27, 1949, (1) accorded privileges of free importation to members of the armed forces of other nations or their families, provided such nations grant reciprocal treatment; (2) amended Public Law 828 (80th Congress, 2nd session), to extend to December 31, 1950, the time for claiming refunds with respect to war losses; (3) amended sections 22 (b) (9) and (10) of the Internal Revenue Code to extend to December 31, 1950, the time during which amounts attributable to discharge of indebtedness may be excluded from gross income; (4) added to Chapter 38 of the Internal Revenue Code section 3809, which prescribes criminal penalties for false returns where made under penalties of perjury, and repealed Internal Revenue Code sections 51 (d), 145 (c), and 1630 relating to the same subject matter; (5) repealed Internal Revenue Code section 148 (f) relating to reports and public listing of compensation of corporate officers and employees in excess of \$75,000; (6) repealed Internal Revenue Code section 1626 (c) and amended section 1631 to prescribe the penalty for the failure of an employee to file a return or pay over-withheld tax: (7) amended Internal Revenue employer to file a return or pay over-withheld tax; (7) amended Internal Revenue Code section 3310 to grant to the Commissioner authority to prescribe regulations with regard to returns and payment of certain excise taxes and to authorize the use of Government depositaries for receiving any internal revenue tax; section 8 of the Second Liberty Bond Act (31 U. S. C., sec. 771) was also amended to allow the Treasury to leave the proceeds of any internal revenue tax on deposit in commercial banks; (8) amended Internal Revenue Code Chapter 35 to add thereto section 3647, authorizing the Commissioner to delegate the power of assessment to field officers; (9) amended Internal Revenue Code section 3770 (a) (4) to permit the Commissioner to credit overpayment of one class of tax against another class of tax due, added a new paragraph (5) to authorize him to delegate to collectors authority to make refunds not in excess of \$10,000 and amended Internal Revenue Code section 3772 by adding subsection (e) to allow a credit for overpayment of any tax against a tax liability to be treated as a payment of such satisfied tax liability in a suit for a refund; (10) repealed Internal Revenue Code section 3776 requiring reports to Congress of refunds in excess of \$500, and amended Internal Revenue Code section 3777 to require reports by the Commissioner of estate, gift, and income tax refunds and credits to the Joint Committee on Internal Revenue Taxation only if they are in excess of \$200,000; (11) amended Internal Revenue Code section 3944 (b) to eliminate the \$7,500 limitation on the salaries of collectors; and (12) amended Internal Revenue Code section 3792 to eliminate

approval by the Secretary of each informer's award.

Public Law 351, October 12, 1949, relating to pay and allowances for members of the armed forces, provided in section 402 (h) a rule for computing that part of disability retirement pay which would not be tax-exempt for the purposes of

Public Law 378, October 25, 1949, (1) amended Internal Revenue Code section 60 (a), to provide that farmers may file income tax returns for a taxable year on or before January 31 of the succeeding taxable year in lieu of declarations of estimated tax due on or before January 15 of such succeeding taxable year; (2) amended Internal Revenue Code section 131 (c) to provide that in a redetermination of United States tax because of a refund of tax paid to a foreign country, such redetermination shall take into account only the net amount of the refund received by the taxpayer and to impose no interest on any deficiency resulting from such redetermination except to the extent interest thereon has been paid by the foreign country for such period; (3) amended Internal Revenue Code section 23 (q) to provide an election for corporations on an accrual basis to include in their charitable contributions for any taxable year after 1942 amounts contributed and paid within 2½ months following the close of the taxable year in which such gifts were authorized; (4) amended Internal Revenue Code section 1802 (b) to exempt from stamp taxes transfers of stock between a corporation and its registered nominee; (5) added subsection (d) to Internal Revenue Code section 165 to provide that contributions by employers to certain employee annuity trusts established prior to 1942 shall be included in the taxable income of the employee only in the year in which the annuity payments are received by the employee; (6) amended Internal Revenue Code section 1000 and other relevant provisions of law to exempt from gift and estate taxes the relinquishment on or before December 31, 1950, of powers over certain reciprocal trusts created prior to January 1, 1940; (7) amended Internal Revenue Code section 811 (c) to provide that a transfer of property made prior to March 4, 1931, shall not be subjected to estate tax by reason of the retention of a life estate or power over income if the transferor either dies before 1950 or divests himself of the life estate or power before 1951; (8) added to section 811 (c) of the Internal Revenue Code paragraph (2), providing that a transfer of property made before October 8, 1949, shall not be subjected to estate tax by reason of the retention of a remote reversionary interest, and paragraph (3), providing that a transfer of property made after October 7, 1949, which is intended to take effect in possession or enjoyment at or after the transferor's death shall be subjected to estate tax whether or not he retained any interest; (9) amended paragraph 1798 of the Tariff Act of 1930 by raising to \$200 the exemption from import duty for articles brought in by returning tourists; (10) added to the Internal Revenue Code a new section 939, to provide an exemption from the additional estate tax for the

EIGHTY-FIRST CONGRESS, SECOND SESSION

Public Law 442, February 7, 1950, amended section 5 of the Federal Firearms Act (52 Stat. 1252) to make subject to seizure and forfeiture, and to the provisions of the Internal Revenue Code relating thereto, firearms or ammunition involved

in any violation of the act.

Public Law 448, February 21, 1950, (1) amended Internal Revenue Code section 2800 (a) (1) to provide for the use of additional means, including stamp machines, for the payment of tax on domestically produced distilled spirits and for criminal penalties with respect thereto; (2) amended Internal Revenue Code section 2877 (a) to broaden the requirements for storekeeper-gaugers' records; (3) amended Internal Revenue Code section 2901 to revise the provisions relating to loss allowances; (4) amended Internal Revenue Code section 2903 (a) to eliminate the provisions for bottling distilled spirits in bond after tax payment: (5) made various technical amendments to Internal Revenue Code sections 2802, 2844 (a), 2861 (a), 2882 (a), 2884 (a), 2886 (a), 2887, and 2915 (a); (6) repealed Internal Revenue Code sections 3112 (b) to extend so far as applicable the provisions of section 2800 (a) (1) (A) and (B) to alcohol produced in the United States or imported for industrial purposes under section 3125; (8) amended Internal Revenue Code section 2883 to provide legislation of a permanent nature to supersede existing provisions of that section which included a number of temporary war emergency provisions.

Public Law 459, March 16, 1950, repealed, effective July 1, 1950, Internal

Public Law 459, March 16, 1950, repealed, effective July 1, 1950, Internal Revenue Code sections 2301 (relating to the tax on oleomargarine) and 3200-3202, inclusive (relating to the occupational tax on manufacturers, wholesalers, and

retailers of oleomargarine).

Public Law 566, June 17, 1950, amended section 3 of the act of June 18, 1934 (48 Stat. 998), relating to the establishment of foreign trade zones, to provide liberalizing provisions in determining taxes to be imposed on importation of foreign products, and to permit transfers of domestic articles to the zone to be considered exportation for drawback and refund purposes.

Public Law 578, June 27, 1950, amended sections 403 (d) (3) and 452 (c) of the Revenue Act of 1942 to extend through June 30, 1951, the period within which the release, or the possession at death without exercise, of a power of appointment created on or before October 21, 1942, will not be subject to estate or

gift tax.

Note.—Maximum earned net income assumed. In the case of married persons it is also assumed that only one spouse has income.

^{*}Less than 50 cents.

^{*}Less than 50 cents.

1 Includes defense tax.

2 Tax liabilities for the years 1942 and 1943 are unadjusted for transition to current payment basis.

3 Includes net Victory tax. Computed by assuming that deductions are 10 percent of Victory tax net income; i. e., that Victory tax net income is ten-ninths of selected net income.

4 Individual Income Tax Act of 1944.

5 Taking into account the following maximum effective rate limitations: For 1943-45, 90 percent; 1946-47, 85.5 percent; 1948-49, 77 percent; 1950, 80 percent; 1951, 87 percent.

NOTE.—This exhibit does not include (1) customs duties, (2) miscellaneous fines and fees, (3) the tax with respect to certain hydraulic mining (act of Mar. 1, 1893, as amended by the act of June 19, 1934), and (4) various taxes levied in the District of Columbia for expenses of the District of Columbia.

For Federal taxes in the period 1913-39, see 1940 annual report, pp. 466-534, and for 1939-44, see 1944 annual report, pp. 458-486.

1 Individual Income Tax Act of 1944.

⁵ The changes in individual income tax exemptions and rates made by the Revenue Act of 1943, intended to be applicable to the taxable year 1944, were superseded by the provisions of the Individual Income Tax Act of 1944 before they became effective.

6 Surtax exemptions. For surtax, each taxpayer was allowed an exemption of \$500, plus \$500 for his spouse and \$500 for each dependent. The normal tax exemption was \$500. However, if husband and wife combined their income in a joint return, the normal tax exemption was \$500 plus the amount of the smaller of the two incomes, but not more than \$1500 for both.

7 For 1946 and subsequent years, the exemptions are allowed for both normal tax and surtax.

8 Beginning with the taxable year 1948 married couples filing joint returns were allowed to divide their combined incomes equally in computing their income taxes.

The Individual Income Tax Act of 1944 eliminated the former requirement that a "dependent" must be under 18 years old or incapable of self-support. Under the 1944 act the taxpayer may claim as a dependent any close relative whose income is less than \$500 and who received more than half of his support from the taxpayer, provided the relative is a resident of the United States, Canada, or Mexico.

10 Allowed to taxpayers and their spouses, but not allowed for dependents.

The additional exemption of \$600 for the blind replaced the special \$500 deduction for the blind provided by the Revenue Act of 1943, applicable to taxable years 1944-47.

² In addition to the Revenue Act of 1943, the Congress enacted the Current Tax Payment Act of 1943, which revised the system of individual income tax payment but made no change in the rates, exemptions, and credits. The act provided for current collection of tax liability by collection at source, and by filing of declarations of estimated tax and the current payment of such tax by taxpayers not made substantially current in their payments through withholding. To provide for transition to current payments, the act in general canceled 75% of either the 1942 or 1943 tax, whichever was the lesser.

³ For rates and exemptions with respect to nonresident alien individuals, see Supplement A, p. 276. For tax treatment of capital gains and losses, see Supplement B, p. 277.

Subsequent to the act of Oct. 22, 1914; and prior to the Individual Income Tax Act of 1944, the personal exemption allowed to married persons was also allowed to heads of families.

12 For taxable years beginning after Dec. 31, 1939, and before Jan. 1, 1941, the sum of the normal tax and surtax computed under the above rates was increased by a defense tax of 10% of the amount of the tax, limited, however, to 10% of the excess of the net income over the sum of the normal tax and surtax.

13 The percentage reductions from tentative tax were eliminated for calendar year 1951 and other taxable years beginning after Sept. 30, 1950. For calendar year 1950 the percentage reductions from tentative tax were reduced to the following: 13% on the first \$400 of tentative tax; 9% on the next \$99,600; and 7.3% on the amount in excess of \$100,000.

14 The combined normal tax and surtax (before deduction of credits for foreign taxes, taxes withheld at source, and taxes withheld on wages) is subject to the following maximum effective rate limitations: Revenue Act of 1944, 90%; Revenue Act of 1945, 85.5%; Revenue Act of 1948, 77%; Revenue Act of 1950, for calendar year 1950, 80%, for calendar

year 1951 and other taxable years beginning after Sept. 30, 1950, 87%.

15 Applicable to taxable year 1943 only. The exemption of \$624 applied to every individual regardless of marital status. However, in the case of a husband and wife filing a joint return, if the Victory tax net income of one spouse was less than \$624, the total exemption was limited to \$624 plus the Victory tax net income of such spouse. The following credits were allowed against the tax: 25% of the tax if single or 40% if married, plus in either case 2% for each dependent. The amount of the credits were limited, however, to \$500 if single, \$1,000 if married, plus \$100 for each dependent. The credits as provided by the Revenue Act of 1942 were to be postwar credits, allowable currently only under specified conditions, but they were converted into automatic current credits by Public Law 178, 78th Congress, approved Oct. 28, 1943. The amount of Victory tax (before tax credits) was limited to the excess of 90% of net income over the regular income tax liability.

16 The amount of net income accounted as earned for purposes of the earned-income credit was all net income up to \$3,000, whether earned or not, and up to \$14,000 if earned. In the case of a taxpayer engaged in a trade or business in which both personal services and capital were material income-producing factors, a maximum of 20% of his share of the net profits of such trade or business was includible within the earned-income category.

17 For tax treatment of capital gains and losses, see Supplement B, p. 277. For taxes on

special classes of corporations, see Supplement C. p. 279.

18 Including defense tax.

19 Notch provision.

For taxable years beginning before July 1, 1950, and ending after June 30, 1950 (except calendar year 1950 returns), the tax is computed under prior law rates on income allocated to the period prior to July 1, 1950, and under the rates applicable to taxable years beginning after June 30, 1950, on income allocated to the period after June 30, 1950. Provision is also made for an earlier schedule of installment payments of the corporation income tax which will ultimately achieve payment of the full tax liability in the first two quarters following the end of the taxable year. A 5-year transition period, beginning with taxable years ending on or after Dec. 31, 1950, is provided, during which the tax payable in the third and fourth quarters is gradually reduced and the tax payable in the first and second quarters is correspondingly increased.

But not in excess of 85% of adjusted net income.
 But not in excess of 85% of adjusted net income after deduction of income subject to

excess profits tax.

23 The total credit allowed for dividends received is limited to an amount equal to 85% of net income, minus the credit for interest received on certain obligations of the United States, computed without regard to the net operating loss deduction. In the case of dividends received in property other than money, the credit is limited to an amount not

greater than 85% of the adjusted basis of the property in the bands of the distributing corporation. For the calendar year 1950, the credit in the case of dividends received on certain preferred stock of public utilities is 57%.

24 The credit for dividends paid by a public utility on certain preferred stock, in the case of a taxable year beginning after June 30, 1950, is an amount equal to 31% of such dividends, but not in excess of 31% of the net income, minus the credit for interest received on certain obligations of the United States and the credit for dividends received. For the calendar year 1950, the applicable credit is 33% of such amounts. The credit for Western Hemisphere trade corporations is shown in Supplement C.

25 See "Recapture of excess profits on certain Government contracts," below

26 The Tax Adjustment Act of 1945, approved July 31, 1945, increased the specific exemption from \$10,000 to \$25,000, effective Jan. 1, 1946, allowed the 10% excess profits postwar refund credit to be taken currently with respect to tax liabilities of 1944 and subsequent years, and advanced the maturity date of outstanding refund bonds to Feb. 1, 1946. Owing to the repeal of the excess profits tax by the Revenue Act of 1945, the increased specific exemption of \$25,000 was not applicable. For taxable years beginning in 1945 and ending in 1946, the excess profits tax was retained for the 1945 portion of the year.

27 The deficit rule was repealed and it was provided that the base period net income in the lowest year of the base period shall not be less than 75% of the average base period net

income of the other three base period years.

28 The Second Revenue Act of 1940 established the rule that the largest deficit of any base period year shall be disregarded in computing average base period net income. Excess Profits Tax Amendments of 1941, applicable to taxable years beginning after Dec. 31, 1939, permitted taxpayers with higher average income in the second half of the base period than in the first half to use the so-called "growth formula."

29 This tax was imposed by sec. 3 of the act of Mar. 27, 1934 (Vinson Act) (48 Stat. 503, 505), as amended by the act of June 25, 1936 (49 Stat. 1926), the act of April 3, 1939 (53 Stat.

555, 560), and the act of June 28, 1940 (Public Law 671, 76th Congress).

36 Any profits in excess of 8.7% of the cost of performing such contracts except prime contracts made on a cost-plus-a-fixed-fee basis completed within the income taxable year shall be considered profits in excess of 8% of the contract price. In a contract entered into on a cost-plus-a-fixed-fee basis, the fee shall not exceed 7% of the estimated cost of the contract (exclusive of the fee as determined by the Secretary of the Navy or the Secretary of War, as the case may be).

31 Sec. 622 (b) of the National Military Establishment Appropriation Act, 1950 (63 Stat. 987, 1021), approved Oct. 29, 1949, provides that "the profit limitation provisions of the act of Mar. 27, 1934 (48 Stat. 503, 505), as amended and supplemented, shall not apply to any contract or subcontract which is subject to the Renegotiation Act of 1948.

32 In community-property States prior to 1942, at the death of a spouse, only one-half of the community property was subject to estate tax irrespective of whether such property was accumulated by that spouse. In the case of gifts of community property, one-half of the gift was taxable to the husband and the other half was taxable to the wife. In noncommunity-property States, the entire amount of property accumulated by the spouse was taxable under the estate and gift tax. The Revenue Act of 1942 provided that, even in the case of community property, transfers were fully taxable to the decedent or donor to the extent that the property was attributable to his personal services. The Revenue Act of 1948 repealed the 1942 provision with the result that transfers of community property are now generally taxable under the pre-1942 law. In addition, the 1948 act provides that transfers of noncommunity property may be split for purposes of the estate and gift taxes.

*3 Estates of decedents dying after June 6, 1932, are subject to two estate taxes—the basic tax under the provisions of the Revenue Act of 1926 plus an additional tax under the Revenue Act of 1932 or 1932 as amended. The rates and exemptions shown in this table are for determining the additional estate tax. The total tax is the amount determined under the basic rate plus the difference between the basic and the additional tax.

34 This exemption and the exemption of \$100,000 under the basic tax are allowed only to resident decedents and citizens. The Revenue Act of 1942 provided for an exemption of \$2.000 in the case of estates of nonresidents not citizens under the additional tax.

35 The \$60,000 exemption replaces the former \$40,000 exemption and \$40,000 life insurance

exclusion. Under the 1942 act, the exclusion for life insurance was eliminated.

36 Rates shown are those for determining the additional tax; the minimum and maxi-

mum rates for determining the basic tax are 1% and 20%, respectively.

37 In the case of a decedent dying after the enactment of the Revenue Act of 1940 (June 25, 1940) and prior to the effective date of the Revenue Act of 1941 (Sept. 21, 1941), there was added to the net tax (after deductions of the credits for gift taxes and State death taxes) computed at the above rates. 10% of the amount of such net tax, as a defense tax.

38 Allowed but once and may be taken all in 1 year or over a period of years at the option

of the donor.

39 Except gifts of future interests and gifts in trust.

49 Except gifts of future interests. Applicable to gifts made after the end of the calendar

⁴¹ A defense tax of 10% of the gift tax computed at the above rates was applicable to gifts made in the calendar year 1940 (determined by proration), and to gifts made in the calendar year 1941.

42 With the exception of the penalty tax on leaf tobacco, and the taxes on dealers and manufacturers, the tobacco taxes apply to products manufactured or imported into the United States and sold or removed for consumption or sale.

43 Defense tax for 5 years, effective July 1, 1940, through June 30, 1945, in lieu of tax under

prior law.

44 Defense tax rate made permanent.
 45 Exports to Territories of the United States for use of members of the armed forces exempted until the termination of hostilities (Dec. 31, 1946) by Public Law 14, 78th Congress. approved Mar. 23, 1943.

46 Counting each 234 inches (or fraction thereof) of the length of each as one cigarette.

47 The retail price classes were changed by the Revenue Act of 1942.

⁴⁸ With the exception of the taxes on rectification of distilled spirits and wines, and fermented malt liquors prior to Aug. 1, 1948, the liquor excise taxes apply to products imported into the United States as well as to domestic products.

49 Brandy taxed at same rate as other distilled spirits by the Revenue Act of 1941 and

subsequent revenue acts.

50 War tax rate in lieu of tax under prior law, applicable until the first day of the first

month which begins 6 months or more after the termination of hostilities.

⁵¹ The Revenue Act of 1945 provided refunds in connection with reductions in taxes on alcoholic beverages and electric light bulbs which under the Revenue Act of 1943 were to have taken place 6 months after the termination of hostilities.

52 Increases in excise tax rates imposed under the 1943 Revenue Act made permanent. 53 Nonbeverage distilled spirits taxed when withdrawn at same rate as distilled spirits. Drawback of part of tax permitted beginning Nov. 1, 1942, if spirits used for certain purposes and manufacturer pays an annual tax of \$25 for withdrawals of not more than 25 proof gallons, \$50 for withdrawals of not more than 50 proof gallons, \$100 for withdrawals of more than 50 proof gallons.

64 Effective Aug. 1. 1948, tax extended to imported fermented liquors by Public Law

857, 80th Congress, approved June 30, 1948.

⁵⁸ Retailers of wines or malt liquors, to members, guests, or patrons at fairs, dances, picnics, etc., shall pay a tax for each calendar month in which such sales are made in lieu of the regular tax, provided that the person or organization retailing the wine or malt

liquor is not otherwise engaged in business as a dealer in wine or malt liquors. Under the Revenue Act of 1940, the rate was increased to \$2.20 per month.

56 Tax made permanent by eliminating expiration date of July 1, 1945.

57 Except for passage to Canada, Mexico, Cuba, or Puerto Rico.

** Effective Jan. 1, 1942, and until the termination of hostilities (Dec. 31, 1946) exports to a possession of the United States, or to a Territory of the United States if for use of members of the armed forces, exempt.

59 Persons admitted free or at reduced rates (except employees, municipal officers on official business, and children under 12 years of age) subject to tax based on the admission charge made to other persons for similar accommodations. The tax on tickets to any spoken play sold at the ticket office of theaters at reduced rates is based upon the price.

for which sold.

⁶⁰ Admissions to affairs for the benefit of religious, educational, and charitable organizations and all other nonprofit organizations made taxable. Members of the armed forces of the United States or Civilian Conservation Corps when in uniform subject to tax based on actual admission charge if admitted at reduced rate (see footnote 59). No tax payable on admission charges for children under 12 years of age if the amount paid is less than 10c. Provision for exemption of admissions of \$3 or less, to have been effective July 1. 1945. repealed.

⁶¹ Admission charges to activities operated on military areas by the Departments of the Army and Navy, exempt effective Oct. 1, 1941, by Public Law 676, 77th Congress, approved July 23, 1942. The same law also provided that members of the armed forces of the United Nations when in uniform should be subject to tax on the basis of the actual

admission charge if admitted at reduced rate (see footnotes 59 and 60).

Effective after Dec. 31, 1947, Public Law 384, 80th Congress, approved Aug. 8, 1947, required that free or reduced rates of admission of members of the armed forces of the United States, the United Nations, or the Civilian Conservation Corps be taxed on the basis of the regular charges for comparable admissions. Effective Aug. 1, 1948, Public Law 706, 80th Congress, approved June 19, 1948, exempted from tax free admissions of a hospitalized member of the armed forces of the United States or of a person hospitalized as a veteran by the Federal Government in a Federal, State, municipal, or private hospital or institution.

as Amount taxable is the amount of admission charge, which is deemed to be 20% of the total paid for refreshments, services and merchandise. Where amount paid for

admission is 50¢ or less no tax shall be paid.

64 Effective July 1, 1944, rate was lowered to 20% by Public Law 333, 78th Congress

approved June 9, 1944.
63 Tax on automobiles and trucks, parts and accessories, tires and inner tubes made

permanent by eliminating expiration date of July 31, 1945.

Exemption of sales to the Federal Government repealed as of June 1, 1944, with respect to the manufacturers' (Chapter 29, Internal Revenue Code) and retailers' excises (Chapter 19, Internal Revenue Code), and the excises on pistols and revolvers, firearms, shells and cartridges, electrical energy, communications services, and transportation of persons and property. In the case of sales of pistols and revolvers, firearms, shells and cartridges, and radios, phonographs, phonograph records and musical instruments, the exemption is repealed, effective July 1, 1947, six months after the termination of tostilities. The Secretary of the Treasury may authorize exemption of sale to the Federal Government from any of the above-mentioned taxes if he determines that the imposition will cause substantial burden or expense which can be avoided by granting tax exemption and that the full benefit of such exemption will accrue to the United States. The discretionary power of the Secretary shall not be applicable to any contract entered into on or after July 1, 1947, six months or more after the termination of hostilities. The Revenue Act of 1945 recealed the time limitation on the discretionary powers of the Secretary.

67 Automobile busses taxed at same rate as trucks. Previously taxed at the higher

rate applicable to passenger automobiles.

68 Repealed, effective after June 30, 1946, by the Revenue Act of 1945.

M in any year the first use of the motor vehicle or boat is after July'31, the tax is reckeded proportionately from the first day of the month in which such use occurs to and including the 30th day of June following.

70 Tax applies only to tractors of the kind used chiefly for highway transportation in

combination with a trailer or semi-trailer.

"Produstanding circulation exempt from taxation (1) whenever such circulation of any bank, association, corporation, company or person is reduced to not over 5% of the chartered or declared capital existing at the time the same was issued; (2) whenever any bank which has ceased to issue notes for circulation deposits in the Treasury of the United States in lawful money the amount of its outstanding circulation to be redeemed at par and (3) whenever any bank is insolvent or bankrupt.

2 Cash registers of the type used in over-the-counter retail sales exempt.

78 Billiard tables or pool tables in a hospital, if no charge is made for use of such table, exempt from tax beginning July 1, 1944.

"Includes "pin ball" and similar amusement devices.

35 Includes any coin-operated amusement or music machine and vending machines operated by a 16 coin with provision for merchandise prizes of not more than 56 retail value.

** Effective Nov. 1, 1950, rate increased to \$150 per machine by the Revenue Act of 1950.

**In the case of (1) dues, if the dues of active resident annual members exceed \$25 per year, (2) initiation fees, if such fees exceed \$10 per year, or if the dues of active resident annual members exceed \$25 per year, not including initiation fees.

annual members exceed \$25 per year, not including initiation fees.

78 In the case of (1) dues, if the dues of active resident annual members exceed \$10 per year, (2) initiation fees, if such fees exceed \$10, or if the dues of active resident annual

members exceed \$10 per year, not including initiation fees.

79 Household type electric vacuum cleaners exempt.

80 Excludes pistols and revolvers and certain firearms on which a tax has been paid

under sec. 2720 of the Internal Revenue Code (see footnote 81).

"I Firearms are defined to include shotguns and rifles with barrels of less than 18 inches in length, other guns capable of being concealed (except pistols and revolvers), machine guns, and mufflers and silencers. The law provides that: In the case of manufacturers and dealers in guns with two attached barrels from which only a single discharge can be made from either barrel without manual reloading, the tax shall be \$25 per year for manufacturers and \$1 per year for dealers; and the transfer tax on such guns, the barrels of which are 12 inches or more in length, shall be at the rate of \$1.

⁸² Effective July 1, 1945, nonautomatic single barreled guns, 12 inches or more in length, designed to be held in one hand when fired were placed in the \$1 transfer tax class by

Public Law 177, 79th Congress, approved Aug. 11, 1945.

*Fur articles made from pelts furnished by a customer, when the article is for use of and not for resale by such a customer, taxable upon the fair retail market value as determined by the Commissioner.

Articles made of fur on the hide or pelt taxable only if the value of the fur is more

than three times the value of the next most valuable component material.

B Retail auction sales of jewelry and furs on behalf of persons not engaged in the business of selling like articles, made taxable as retail sales under Revenue Act of 1950, except that the first \$100 of sales exempted where the auction sale takes place at the home of the person whose articles are being sold.

86 Articles sold at retail by any agency or instrumentality of the United States made

taxable under Revenue Act of 1950, unless specifically exempted by statute.

87 Natural born residents of North, South, and Central America, and adjacent islands were exempted from tax from Apr. 29, 1943, to Dec. 31, 1947, by Public Law 45, 78th Congress, approved Apr. 29, 1943, Public Law 229, 78th Congress, approved Feb. 14, 1944, and Public Law 40, 80th Congress, approved Apr. 28, 1947.

28 Applies only on imports if imports from a country during the preceding calendar year

exceeded exports to it.

⁹⁹ Suspended, except for copper sulphate and other specified types of copper, from Apr. 30, 1947, to June 30, 1950, by Public Law 42, 80th Congress, approved Apr. 29, 1947, and Public Law 33, 81st Congress, approved Mar. 31, 1949. Public Law 869, 81st Congress, approved Sept. 30, 1950, extended the suspension with regard to scrap until June 30, 1951. M Flooring of maple, birch, and beech, and Northern white spruce is exempt.

11 The rate was reduced by various trade agreements.

Or a does not apply to any article, merchandise, or combination if any coconut oil or derivative thereof produced in Guam or American Samoa is contained therein.

93 Tax does not apply to rapeseed oil imported for use in the manufacture of rubher

substitutes or lubricating oil.

⁴⁴ No whale oil (except sperm oil), fish oil, or marine animal oil of any kind may enter tax-free unless such oil was produced on vessels of the United States or in the United States or its possessions, from whale, fish, or marine animals or parts thereof taken and captured by vessels of the United States.

A Tax does not apply to any article used for religious purposes, to surgical instruments, or to frames or mountings for spectacles or eyeglasses, or to a fountain pen if the only parts of the pen which consist of precious metals are essential parts not used for ornamental

purposes.

WAdditional exemptions: Watches designed especially for use by the blind, smokers' pipes if the only parts which consist of precious metals are essential parts not used for ornamental purposes, and buttons, insignia, cap devices, chinstraps, and other devices prescribed for use in connection with the uniforms of the armed forces of the UnitedStates.

"Silver-plated flatware exempt. Watches retailing for not more than \$65 and alarm clocks retailing for not more than \$5 taxed at 10%, effective Sept. 1, 1945, mechanical pencils having precious metals as essential parts exempted from tax by Public Law 180,

79th Congress, approved Aug. 11, 1945.

98 Tax extended to cover purses, handbags, wallets, billfolds, and similar articles.
99 Tax does not apply to retail stocks held at the place where intended to be sold, nor

to matches held for sale by the manufacturer or importer thereof.

100 A barrel contains more than 98 pounds but not more than 196 pounds. The tax on smaller amounts of mixed flour is as follows: 2¢ per half barrel containing more than 49 pounds but not more than 98 pounds; 1¢ per quarter barrel containing more than 24½ pounds but not more than 49 pounds; 3½¢ per one-eighth barrel containing 24½ pounds or less.

101 Effective July 4, 1948, musical instruments sold for the use of religious or nonprofit educational institutions exclusively for religious or educational purposes exempted from

tax by Public Law 899, 80th Congress, approved July 3, 1948.

Effective July 4, 1946, Public Law 371, 79th Congress, approved Apr. 30, 1946, repealed the provision requiring that tax collected on processing of coconut oil from the Philippines be paid into the Philippine treasury.

103 Additional tax of 2¢ per pound if coconut oil is not from the Philippines or other

possession of the United States.

Taxes collected with respect to coconut oil wholly of the production of Guam or American Samoa or produced from materials wholly of the growth or production of Guam or American Samoa, held as separate funds and paid to the treasury of Guam or American Samoa, respectively.

Additional tax of 2¢ per pound suspended for the period Sept. 17, 1942, to Aug. 26, 1949, by Public Law 711, 77th Congress, approved Sept. 16, 1942; Public Law 390, 78th Congress, approved June 30, 1944; and Presidential proclamation of June 27, 1946. Suspension terminated, effective Aug. 27, 1949, by Presidential proclamation of July 27, 1949. (See footnote 103.)

106 Tax does not apply to palm oil used in the manufacture of tin plate, terne plate, or any subsequent use of palm oil residue resulting from the manufacture of tin plate or

terne plate.

107 Palm oil used in the manufacture of iron or steel products exempt.

108 Repealed effective July 1, 1950, by Public Law 459, 81st Congress, approved Mar. 16, 1950

109 Cameras weighing more than 4 pounds exclusive of lens and accessories exempt.

110 Basis of tax changed from value of specified component parts of radios to value of complete radio.

III Effective Nov. 1, 1950, tax extended to television sets by Revenue Act of 1950.

112 Effective Nov. 1, 1950, tax extended to household units for the quick freezing or frozen storage of foods by Revenue Act of 1950.

118 Tax not applicable to footwear, articles designed especially for hospital or surgical use, or articles taxable under other provisions of Chapter 29 of the Internal Revenue Code.

No tax is imposed upon any payment received from any person for services utilized in collection of news for public press or radio broadcasting, or in the dissemination of news through the public press or by means of radio broadcasting if the charge for such services is billed to such person.

113 Sales to beauty and barber shops of preparations for resale not considered a sale at

116 Certain vessels are specifically exempt from the tax. (See 46 U.S.C., secs. 122-126,

117 The tax is imposed upon the transfer of stock or securities by a citizen or resident of the United States, or by a domestic corporation, partnership, or trust to a foreign corporation as paid-in surplus or as a contribution to capital, or to a foreign partnership or trust.

tion as paid-in surplus or as a contribution to capital, or to a loreign partnership or trust.

118 If no charge is made, or charge is less than "fair charge," the tax is on the fair charge

for transportation.

Transportation of oil through lines of pipe within a refinery, bulk plant, terminal, or a gasoline plant, if not a continuation of taxable transportation, is not included within the

term transportation

120 No tax is imposed on amounts paid for: transportation for which the charge does not exceed 35¢, commutation or season ticket for single trips of less than 30 miles, commutation tickets for one month or less. Payments for round-trip tickets at tariffs of not more than 1½¢ per mile by members of the armed forces of the United States in uniform and traveling at their own expense when on official leave are exempt.

is Exemption for special rate furlough tickets extended to members of the armed forces

of any of the United Nations. (See footnote 120.)

127 The Excise Tax Act of 1947 exempted from tax transportation, any part of which is outside the northern portion of the Western Hemisphere, except with respect to any part of such transportation which is from any port or station within the United States, Canada or Mexico to any other port or station within the United States, Canada or Mexico. For purposes of this exemption, Public Law 35, 81st Congress, approved Mar. 31, 1949, provided that effective Apr. 1, 1949, a port or station within Newfoundland shall not be considered as being within Canada. The exemption from tax on transportation granted

to uniformed members of the armed forces of the United States or the United Nations was terminated effective Dec. 31, 1947, by Public Law 384, 80th Congress, approved Aug. 8, 1947.

123 Effective Nov. 1, 1950, the Revenue Act of 1950 requires the collection of tax where payment is made without the United States for travel which begins or ends in the United States, or for the transportation of property from one point in the United States to another.

124 The tax on transportation of property does not apply to the transportation of coal

with respect to which there has been a previous taxable transportation.

125 Expired Aug. 23, 1943.

126 The Commissioner of Internal Revenue shall determine the fair market value thereof. Such fair market value shall equal the current market price at the mine of coal of a comparable kind, quality, and size produced for market in the locality where the coal so disposed of is produced.

127 Effective date extended from June 30, 1945, to June 30, 1947, by Public Law 345, 78th Congress, approved June 20, 1944, and from June 30, 1947, to June 30, 1948, by Public

Law 558, 79th Congress, approved July 27, 1946.

128 Effective date extended from June 30, 1948, to June 30, 1953, by Public Law 388, 80th

Congress, approved Aug. 8, 1947.

139 For the period through 1950, "wages" do not include remuneration to an individual in excess of \$3,000 in a calendar year; thereafter remuneration in excess of \$3,600 in a cal-

endar year is excluded.

100 The tax is imposed by the Federal Insurance Contributions Act (embodied in Social Security Act Amendments of 1939) which superseded title VIII of the Social

Security Act of 1935.

131 Changes were enacted in Public Law 211, 78th Congress, Dec. 22, 1943, and in Reve-

nue Act of 1943.

132 Changes were enacted in Public Law 495, 78th Congress, Dec. 16, 1944.

133 Changes were enacted in Public Law 719, 79th Congress, Aug. 10, 1946 (Social Security Act Amendments of 1946).

134 Changes were enacted in Public Law 379, 80th Congress, Aug. 6, 1947 (Social Security Act Amendments of 1947).

135 Changes were enacted in Public Law 734, 81st Congress, Aug. 28, 1950 (Social Se-

curity Act Amendments of 1950).

126 The tax is imposed by the Federal Unemployment Tax Act (embodied in Social Security Act Amendments of 1939) which superseded title IX of the Social Security Act of 1935. A credit up to 90% of the tax is allowed for contributions paid into an unemployment fund under a State law.

137 Tax does not apply to net earnings from self-employment when such earnings for the taxable year are less than \$400, nor does it apply to that part of self-employment income which exceeds (a) \$3,600 minus (b) the amount of wages subject to social security tax.

in a calendar month. Prior to 1947, the income tax on employees and employee representatives was based on compensation earned, and the excise tax on employeers (under the Railroad Unemployment Insurance Act) was based on compensation payable.

139 Changes were enacted in Public Law 572, 79th Congress, July 31, 1946.

140 If the balance to the credit of the account on Sept. 30 of any year is less than \$250 million, the tax rate for the following year is 3%; if the balance is between \$250 and \$300 million, the rate is 2½%; if the balance is between \$300 and \$350 million, the rate is 2%; if the balance is between \$400 million, the rate is 1½%; if the balance is between \$400 and \$450 million, the rate is 1½; if the balance is between \$400 and \$450 million or over, the rate is ½%. Public Law 744, 80th Congress, June 23, 1948.

Exhibit 26.—Federal taxes of the United States, 1940 through 1950—Continued

SUPPLEMENT A.-PERSONAL EXEMPTIONS, TAX BASE, AND RATES APPLICABLE TO NONRESIDENT ALIEN INDIVIDUALS

Federal tax law	Income year	Personal exemption ¹	Tax base	Withhold- ing rate (percent)
Internal Revenue Code as amended by Revenue Act of: 1940 1941 1942, 1943, Individual Income Tax Act of 1944 and Revenue Act of 1945. 1948 and 1950	1940 1941 1942-47 1948-	\$800 750 500 600	Fixed or determinable annual or periodical gains, profits, and income from sources within the United States. do do	2 1632 2732 3 30 4 30

Note.—Nonresident aliens engaged in trade or business within the United States are taxed at the same rates as residents of the United States. Nonresident aliens not engaged in trade or business within the United States, who derive not more than \$21,600 in 1939, \$24,000 in 1940, \$23,000 in 1941, and \$15,400 in 1942 and subsequent years from fixed and determinable annual or periodical gains, profits, and income from sources within the United States are subject to the rates shown in the table, withheld at source on the gross amount of such income without personal exemption or credit for dependents. By treaty agreement with a contiguous country (Canada or Mexico) for 1939 through 1940, and with any country in North, Central, or South America, the West Indies, or Newfoundland for 1941 and subsequent years, these rates may be reduced to not less than 5%. Undetreaty agreements the rates applicable to residents of Canada are 5% for 1940, and 15% for 1941 and subsequent years. Salary or other compensation for personal services of a resident of Canada or Mexico who enters and leaves the United States at frequent intervals is not subject to the withholding rates shown in the table, but for 1943 such income was subject to Victory tax withholding and thereafter to withholding at rates applicable to residents of the United States. Nonresident aliens with no United States business (other than those affected by a treaty) who report more than the above specified amounts of gross income are liable to normal tax and surfax on such income after deductions applicable thereto and the personal exemption shown in the table. The total tax, however, shall in no case be less than the withholding rate shown in the table. The total tax, however, shall in no case be less than the withholding rates thown in the table. In addition, such nonresident aliens were subject to the 10% defense tax applicable to the taxable year 1940, and

the Victory tax applicable to the taxable year 1943. For tax treatment of capital gains of nonresident allens not engaged in trade or business in the United States, see Supplement B, page 278 (footnote 1).

¹ Whether nonresident alien is single, married or head of a family, except that for 1942 and subsequent years residents of Canada or Mexico are allowed the same exemption as a citizen of the United States. Credit for dependents allowed only to residents of Canada or Mexico.

² Includes 10% defense tax.

As provided by the Revenue Act of 1943, on or after Mar. 6, 1944, the rate of withholding on the compensation for services performed by a nonresident alien individual, or by a citizen of a possession of the United States not otherwise a citizen of the United States, brought into the United States under authority of the War Manpower Commission for temporary employment essential to the war effort shall be at the reduced rate of 10% on the gross amount of compensation derived from labor or personal services by such an individual.

4 For taxable years beginning after Dec. 31, 1950, citizens of Puerto Rico deriving income from sources within the United States will be taxable on such income to the same extent and in the same manner as United States citizens, and the 30 per cent withholding tax will be inapplicable to them.

long-term gain not subject to excess

profits tax.3

¹ For taxable years beginning after Dec. 31, 1949, capital gains of nonresident aliens, not engaged in trade or business in the United States but temporarily present here, are subject to tax. In the case of those present in the United States for less than 90 days, the tax applies only to gains realized from transactions effected during their presence. In the case of those present in the United States for 90 days or more, the tax applies to all their gains from transactions in this country during the taxable year whether or not they were present when the gain was realized.

³ The excess profits tax is not applicable to taxable years beginning after Dec. 31, 1945.
⁴ Net gain from sale or exchange of depreciable property held more than 18 months, as well as net long-term capital gain, was excluded in 1940 and 1941 from excess profits tax net income by a special provision which was discontinued with the enactment in 1942 of sec. 117 (j) which had in general the same effect on long-term holdings. Under the Revenue Act of 1942 (sec. 208) involuntary conversions of such property were also excluded retroactively from excess profits net income for 1940 and 1941.

INTERNATIONAL FINANCIAL AND MONETARY DEVELOPMENTS

Exhibit 27.—Report of activities of the National Advisory Council on International Monetary and Financial Problems, April 1 to September 30, 1949

[House Document No. 450, 81st Congress, 2d session]

LETTER OF TRANSMITTAL

To the Congress of the United States:

Attached hereto is a report of the National Advisory Council on International Monetary and Financial Problems covering its operations from April 1, 1949, to September 30, 1949, and describing, in accordance with section 4 (b) (5) of the Bretton Woods Agreements Act, the participation of the United States in the International Monetary Fund and the International Bank for Reconstruction and

Development for the above period.

Previous reports of the National A

Previous reports of the National Advisory Council were transmitted to the Congress on March 1, 1946, March 8, 1946, January 13, 1947, June 26, 1947, January 19, 1948, May 17, 1948, August 3, 1948, March 14, 1949, and July 5, 1949, respectively. In addition to the First Special Report on the Operations and Policies of the International Monetary Fund and the International Bank for Reconstruction and Development, submitted on May 17, 1948, previous reports on the participation of the United States in the International Monetary Fund and the International Bank were included in the reports of January 13, 1947, June 26, 1947, January 19, 1948, August 3, 1948, March 14, 1949, and July 5, 1949, respectively.

HARRY S. TRUMAN.

THE WHITE HOUSE, January 20, 1950.

REPORT OF ACTIVITIES OF THE NATIONAL ADVISORY COUNCIL ON INTERNATIONAL MONETARY AND FINANCIAL PROBLEMS, APRIL 1, 1949, TO SEPTEMBER 30, 1949

I. ORGANIZATION OF THE COUNCIL

STATUTORY BASIS

The National Advisory Council on International Monetary and Financial Problems was established by the Congress in the Bretton Woods Agreements Act (59 Stat. 512, 22 U. S. C. 286b), approved July 31, 1945. The statute directed the Council to coordinate the policies and operations of the representatives of the United States on the International Monetary Fund and the International Bank for Reconstruction and Development, the Export-Import Bank of Washington, and all other agencies of the Government "to the extent that they make or participate in the making of foreign loans or engage in foreign financial, exchange, or monetary transactions." The Council was also directed to advise and consult with the President and the United States representatives on the Fund and the Bank on major

problems arising in the administration of the Fund and the Bank; and to recommend to the President general policy directives for the guidance of the representatives of the United States on the Fund and Bank. The Bretton Woods Agreements Act was amended by section 106 of the Foreign Assistance Act of 1948 (62 Stat. Ch. 169, 22 U. S. C. 286b (a)), approved April 3, 1948, to include the Administrator for Economic Cooperation as a member of the Council for the duration of The Council was also given certain additional duties with this office. regard to the economic assistance program.

In June 1949, the Bretton Woods Agreements Act and the National Bank Act were amended (Public Law 142, Ch. 276, 81st Cong., 1st sess.), to permit wider dealing in and underwriting of International Bank securities and to exempt such securities from the Securities Acts. The legislation also authorized the Securities and Exchange Commission, acting in consultation with the Council, to suspend the exemption of International Bank securities from the Securities Acts.

The relevant portions of the Bretton Woods Agreements Act, the Foreign Assistance Act of 1948*, and amendments to the National Bank Act and the Bretton Woods Agreements Act are presented in

appendix A.

REPORTS

Since its first meeting on August 21, 1945, the Council has submitted nine formal reports.1 The present report covers the activities of the Council from April 1 to September 30, 1949.

MEMBERSHIP

The members of the Council, according to law, during the period under review, were the following:

The Secretary of the Treasury, John W. Snyder, Chairman.

The Secretary of State, Dean Acheson.

The Secretary of Commerce, Charles Sawyer.

The Chairman of the Board of Governors of the Federal Reserve System, Thomas B. McCabe.

The Chairman of the Board of Directors of the Export-Import Bank, Herbert E. Gaston.

The Administrator for Economic Cooperation, Paul G. Hoffman.

By agreement, the following served as alternates:

William McChesney Martin, Jr., Assistant Secretary of the Treasury.

Willard L. Thorp, Assistant Secretary of State for Economic

Thomas C. Blaisdell, Jr., Assistant Secretary of Commerce.

M. S. Szymczak, Member of the Board of Governors of the Federal Reserve System.

^{*}Omitted in this exhibit; see note at end of exhibit.

These reports were transmitted by the President to the Congress on March 1, 1946 (H. Doc. No. 489, 79th Cong., 2d sess., subsequently included as appendix B to H. Doc. No. 497, 79th Cong., 2d sess.); March 8, 1946 (H. Doc. No. 497, 79th Cong., 2d sess.); January 13, 1947 (H. Doc. No. 53, 80th Cong., 1st sess.); June 26, 1947 (H. Doc. No. 565, 80th Cong., 2d sess.); January 19, 1948 (H. Doc. No. 501, 80th Cong., 2d sess.); May 17, 1948 (H. Doc. No. 556, 80th Cong., 2d sess.); May 17, 1948 (H. Doc. No. 556, 80th Cong., 2d sess.); August 3, 1948 (H. Doc. No. 573, 80th Cong., 2d sess.); March 14, 1949 (H. Doc. No. 120, 81st Cong., 1st sess.);

EXHIBITS 283

Hawthorne Arey, Vice Chairman of the Board of Directors of the Export-Import Bank.

Wayne C. Taylor, Assistant to the Administrator, Economic Cooperation Administration.

C. Dillon Glendinning is the Secretary of the Council.

The United States Executive Directors of the International Monetary Fund, Frank A. Southard, Jr., and of the International Bank for Reconstruction and Development, Eugene R. Black, or their alternates, Henry J. Tasca and John S. Hooker, respectively, regularly attended the meetings of the Council. On May 18, 1949, Mr. Black was elected President of the International Bank, and assumed his new duties on July 1, 1949.

II. United States Postwar Foreign Assistance 2

As in previous reports of the Council, this chapter outlines the magnitude and scope of assistance extended by the United States to nations throughout the world. In its consideration of the foreign financial policies of this country, the Council has taken into account, in addition to the objectives of the programs, the interrelationship of the various factors affecting the extent and direction of foreign aid.

THE MAGNITUDE AND GEOGRAPHICAL DISTRIBUTION OF POSTWAR FOREIGN AID

In the four-year period, July 1945 through June 1949, the United States exported approximately 67 billion dollars in goods and services to foreign countries and imported 35 billion dollars worth. During this period, United States Government foreign assistance utilized amounted to 23 billion dollars, or over one-third of the value of all imports of foreign countries from the United States. Foreign countries liquidated gold and dollar assets of about 6.6 billion dollars,3 and additional dollars were made available from disbursements by the International Monetary Fund and the International Bank, United States private financing, and other capital movements.

During the postwar period, through June 30, 1949, a somewhat larger share of United States Government foreign aid was rendered in the form of grants, including (for statistical purposes) assistance for which terms of repayment are subject to future determination, as compared with loans and other credits which call for the repayment of principal and interest to the United States. As of June 30, 1949, the outstanding indebtedness of foreign countries to the United States Government, excluding that arising from World War I debts, amounted to 9.8 billion dollars. During the postwar period, repayments on principal were in excess of 1 billion dollars. Annual foreign debt service to the United States Government, including interest and amortization of principal, will increase between 1949 and 1952, reaching a peak of about one-half billion dollars in the latter year.

²A detailed break-down of the statistical information referred to in this section appears in appendixes B and C. [Omitted in this exhibit; see note at end of exhibit.]

³ The net difference between the 6.6 billion dollars mentioned above and the 5.0-billion-dollar reduction in foreign gold and dollar balances shown in table III is largely accounted for by sales of gold to the United States out of current foreign gold production.

Source: Clearing Office for Foreign Transactions, Office of Business Economics, Department of Commerce.

Of the 23.3 billion dollars of United States Government assistance utilized by countries throughout the world in the postwar period, approximately 16.4 billion dollars, or 70 percent, went to nations presently participating in the European Recovery Program. Although aid received by the European Recovery Program participants, as a group, was almost equally divided between grants and credits, the allocation to individual countries varied considerably. Grant assistance has been the more widely dispersed, with 70 percent of the total utilized going to four countries—the United Kingdom, Western Germany, France, and Italy—as contrasted with 80 percent of total credit assistance going to two countries, the United Kingdom and France.

Asiatic nations (primarily Japan and China) were the recipients of over 4 billion dollars in postwar United States Government aid, almost five-sixths in the form of grants. On the other hand, postwar assistance to Latin America—which amounted to over \$350,000,000—was largely in the form of loans and credits.

Of the 3.9 billion dollars available for foreign aid but unutilized on June 30, 1949, approximately one-half consisted of ECA funds allocated and obligated by country but not disbursed as of that date.

AGENCIES AND PROGRAMS OF FOREIGN AID

The first year after the end of the war witnessed a larger proportion of aid in the form of grants than in loans, due primarily to relief assistance extended through UNRRA and post-VJ-day lend-lease grants. For the fiscal year 1947, large drawings from the 3.75 billion dollar line of credit extended to the United Kingdom swung the balance toward a preponderance of credit assistance. In the fiscal year 1948, grants increased and credits declined, resulting in an equal division of aid between grants and credits. Since mid-1948, after the advent of the European Recovery Program, the major part of United States foreign assistance has been in the form of grants. During this four-year period, the average rate of aid rendered has amounted to 5.8 billion dollars per year.

[Omitted in this exhibit; see note at end of exhibit.]

Source: Clearing Office for Foreign Transactions, Office of Business Economics, Department of Commerce.

The chief agencies through which foreign financial and economic assistance was extended by the United States immediately after the war were the Export-Import Bank, the lend-lease organization, and UNRRA (see table II and chart B). In addition, surplus property was available for sale in various foreign countries, a large part of which could be used for peacetime as well as military purposes. The Congress had, furthermore, provided funds to be administered by the Department of the Army for government and relief in occupied areas, principally Germany and Japan.

By the end of the fiscal year 1947, practically all of the aid rendered through post-VJ-day lend-lease and through UNRRA had been utilized. In addition, all of the loan to Britain had been utilized by the end of the fiscal year 1948. Finally, the bulk of surplus property

located overseas had also been sold by mid-1948.

Completion of several early postwar programs left the United States, at the end of 1947, with three major avenues of foreign assistance: (1) the Export-Import Bank, whose lending authority had been increased in 1945 from \$700,000,000 to 3.5 billion dollars; (2) the initiation of the Interim Aid Program, which anticipated the long-range European Recovery Program; and (3) government and relief in occupied areas (GARIOA), as a responsibility of the Department of the Army.

The European Recovery Program got under way in the spring of 1948. Introduction of this program resulted in a realignment of the agencies designated to carry out programs of foreign assistance. The Congress also integrated into the Foreign Assistance Act of 1948

provision for assistance covering other major aid programs.

In the two fiscal years of 1948 and 1949, the total amount of foreign assistance utilized amounted to 11,664 million dollars, almost identical with the 11,646 million dollars extended during the first two postwar years. A principal source of United States assistance in this second

907795--51----20

2-year period has been the European Recovery Program, which accounted for about 65 percent of all aid during the fiscal year 1949.

The Mutual Defense Assistance Program, for which the Congress authorized 1.3 billion dollars in October 1949, was developed with attention to the primary need for economic recovery in Europe. This program embodied parts of several earlier programs for which the Congress provided funds.

In addition to military assistance, proposed legislation bearing upon foreign aid considered during 1949 was that resulting from promulgation of the Point IV Program. As indicated in chapter III of this report, no authorization was made by the Congress for that program during 1949.

FOREIGN GOLD AND DOLLAR RESERVES

The gold and short-term dollar reserves which foreign nations had on hand at the end of the war were available for two main purposes: for currency reserves, and as working balances for international transactions. As shown in table III, these reserves declined by over 5 billion dollars during the postwar period from June 30, 1945, to June 30, 1949. The decline would have been greater were it not for the fact that during this period foreign gold production, exclusive of the U. S. S. R., amounted to about \$700,000,000 per year.

¹ Exclusive of international organizations and the gold holdings of the U. S. S. R.
² Includes gold held by Tripartite Commission for the Restitution of Monetary Gold.

Prior to the start of the Recovery Program, ERP countries had lost, in the aggregate, slightly over 3 billion dollars, or 30 percent of their monetary reserves. The decline continued for the first few months after the Recovery Program started in April, but from June 30, 1948, to June 30, 1949, there was a small increase from 7.3 billion dollars to 7.5 billion dollars in the gold and dollar reserves of the participating countries. Among the major countries, Italy and Belgium were able to increase their reserves, while those of the United Kingdom showed a considerable decline.

CHART C

Outside of Europe, net declines over the postwar period have more than offset isolated increases. The Latin American countries lost over \$800,000,000 in reserves, or more than one-fifth of the amount they had on hand at the end of the war. Other nations which have experienced heavy gold and dollar losses include Canada and the Union of South Africa, despite the fact that both of these countries are leading gold producers.

With respect to gold movements alone, chart C shows that in the early postwar period, there was a heavy net flow of gold from foreign countries to the United States, reaching a peak of 2.9 billion dollars in The inception and continuation of the European Recovery Program enabled the participating countries as a whole to avoid further large liquidation of remaining reserves during 1949, though the United Kingdom experienced a critical drain during part of the

year.

CHANGING PATTERNS OF UNITED STATES FOREIGN TRADE

The repercussions of war greatly shifted the prewar pattern of world Germany and Japan witnessed reductions in their external trade to the point where exports became negligible and imports consisted chiefly of aid from the United States. Other countries, both belligerent and nonbelligerent, affected in varying degrees by the war, also experienced wide changes in their trade. Postwar exports of the United States, expressed both in quantitative units and in terms of value, have been considerably greater than imports. The United States, which had supplied 14 percent of world exports in 1938, had become the source of supply of 33 percent of all exported goods in 1947, 23 percent in 1948, and approximately 20 percent in the first nine months of 1949.

As indicated in table IV, there has been a considerable shift in the geographical pattern of United States foreign trade. The share of Asia and Oceania in both the imports and exports of the United States has declined, and the prewar export surplus of this area with the United States has shifted to an import surplus. United States postwar imports from both Latin America and Canada substantially increased, whereas the dollar value of imports from Europe has only slightly increased above the prewar level. The dollar value of exports to Latin America and Canada showed a fivefold increase in the postwar period as compared with prewar, while exports to Europe, including those financed through the European Recovery Program, showed

less than a fourfold increase.

During the first 9 months of 1949, the dollar value of United States imports showed a moderate increase over the 1946-48 level, while exports registered a slight decline. Compared with the year 1948, however, both imports and exports decreased to a small extent. the first 9 months of 1949, countries participating in the European Recovery Program imported approximately \$5 of goods and services from the United States for every \$1 of exports to this country. represented some improvement, as compared with the period 1946-48, in the trade deficit of these countries with the United States.

OTHER ASPECTS OF FOREIGN ASSISTANCE

United States Government foreign aid during the postwar period amounted to 2.5 percent of the gross national product. Although the dollar value of such assistance in the fiscal years 1948 and 1949 was approximately equal to that in the two immediate postwar fiscal years 1946 and 1947, the gross national product of the United States showed almost a 20 percent increase. As a consequence, foreign aid declined from 2.7 percent of the Nation's gross national product in the first two fiscal postwar years to less than 2.3 percent in the fiscal years 1948 and 1949.

With the exception of the fiscal year 1946, which included extraordinary wartime expenditures, total expenditures of the United States

Government showed slight variation during the postwar period. Thus foreign aid as a percentage of total Federal expenditures remained relatively constant, ranging between 14.7 and 17.0 percent in the three most recent postwar years.

Figures for the fiscal year 1948 include a 3-billion-dollar transfer in June to Foreign Economic Cooperation trust fund; figures for fiscal year 1949 exclude expenditures from this fund.
 Data exclude payments to the International Bank and the International Monetary Fund.

Sources: Department of Commerce for data on gross national product and foreign aid. Treasury Department for total expenditures of the U.S. Government.

In addition to United States Government aid, a significant amount of United States private capital and gifts has gone abroad in the postwar period. The net amount of these funds totaled 4.9 billion dollars in the four years from July 1945 to June 1949. Private postwar investments were largely concentrated in petroleum development in a relatively few countries.

Total funds authorized and appropriated by the 81st Congress, 1st session, for foreign assistance, amounted to 6.6 billion dollars. European Recovery Program funds of 3.9 billion dollars account for three-fifths of this total. Under the Mutual Defense Assistance Program, \$1,211,370,000 was authorized for the North Atlantic Treaty countries and for Greece and Turkey, as well as \$102,640,000 for Middle Eastern and Asiatic countries. An additional amount of \$45,000,000 for assistance to Greece and Turkey under the act of May 22, 1947 (61 Stat. 103), was appropriated under the Foreign Aid Appropriations Act of 1949 (Public Law 327, 81st Cong., 1st sess.).

Appropriations under GARIOA of \$912,500,000 for the fiscal year 1950 compared with \$1,300,000,000 appropriated for the fiscal year 1949. This decline reflects, in part, transfer of the administration of funds for certain countries—such as Korea—from the Department of the Army to the Economic Cooperation Administration and the Mutual Defense Assistance Program.

The Korean aid program was presented by the Administration as a three-year program with an appropriation request for \$150,000,000 during the first year, fiscal 1950. Appropriations amounting to \$60,000,000 were effective through February 15, 1950.

FOREIGN AID FUNDS FOR FISCAL 1950

The following table shows foreign aid funds made available by the Congress during 1949:

1 Under specific appropriations and authorizations, funds were made available beyond the fiscal year, 1950, for such items as ECA guaranties, certain phases of the Mutual Defense Assistance Program, Philippi e rehabilitation, and construction of the United Nations building.

2 This amount is not included in the total since these funds technically were considered to have been available for allotments or other use prior to June 30, 1949.

3 Public Law 47, 81st Cong., 1st sess., authorized ECA to borrow \$150,000,000 from the Treasury for the purpose of extending guaranties, less any amount allocated for that purpose prior to April 3, 1949. \$27,700,000 had been so allocated prior to April 3, 1949, but only approximately \$3,600,000 of guaranties had actually been made. Therefore ECA was authorized to make up to approximately \$146,400,000 in new guaranties after April 3, 1949. This amount is not limited for use within the fiscal year.

4 For expenditures necessary to enable the President to carry out the Mutual Defense Assistance Act of 1949 (Public Law 329, 81st Cong., 1st sess.) for the period through June 30, 1950; \$814,010,000. In addition, the President is authorized to enter into contracts for carrying out the provisions of title I (North Atlantic Treaty countries), of this act not in excess of \$500,000,000 during the period ending June 30, 1950.

4 From July 1 to October 15, 1949, \$30,000,000 of assistance to Korea was provided at the same rate of expenditure as in the fiscal year 1949, pending the enactment of legislation by the Congress outlining the terms and conditions under which further assistance; is to be rendered in 1950. From October 15, 1949, to February 15, 1950, pending enactment of legislation authorizing aid to Korea.

4 Out of the unexpended balances from the 1948 appropriations to China (Public Law 793, 80th Cong.), the Congress made available and Public Law 327, 81st Cong., Ist sess., out of any unobligated balance of the amount made available under Public Law 327, 81st Cong., to be used for

balance of the amount made available under Fuoite Law 41, 515, Cong., to be used to teach the for Chinese citizens.

7 Authorized under Public Law 903, 80th Cong., 2d sess., approved August 11, 1948. Of the \$65,000,000 authorized, \$11,465,935 had been disbursed by June 30, 1949.

8 Of a total appropriation of \$16,000,000, \$8,000,000 had been expended by June 30, 1949. The legislation provided for a sum of \$16,000,000 to be available until June 30, 1950, of which \$8,000,000 was to be used to repay without interest the RFC for advances made pursuant to section 1 of Public Law 25, 81st Cong., 1st sess.

9 Public Law 283, 81st Cong., 1st sess., extends the life of the Institute of Inter-American Affairs to June 30, 1955, and authorizes total appropriations of \$35,000,000.

III. ACTIVITIES OF THE COUNCIL FROM APRIL 1, 1949, TO SEPTEMBER 30, 1949 (OTHER THAN THOSE RELATING TO THE INTERNATIONAL MONETARY FUND AND THE INTERNATIONAL BANK)

EUROPEAN RECOVERY PROGRAM

ECA appropriations and authorizations, 1949-50

The European Recovery Program was predicated from its inception on the assumption that progress in recovery would be accompanied by a reduction in the amount of aid extended. It was contemplated that the United States would provide dollar assistance to stimulate recovery and that the European countries would complement American aid with their own efforts of mutual assistance and self-help. In accordance with these principles, the Administration requested appropriations for the second year of the European Recovery Program which were approximately 20 percent below those which had been

provided for the first year.

On April 19, 1949, the Congress authorized a total of \$5,580,000,000 for European recovery (Public Law 47, Ch. 77, 81st Cong., 1st sess.), to provide funds for the April–June quarter of 1949, and for the fiscal year 1949–50. The appropriation bill for foreign aid, however, passed on October 6, 1949 (Public Law 327, Ch. 621, 81st Cong., 1st sess.), provided a smaller amount, as indicated in table VI of chapter II. Operations for a portion of the interim period were covered by the authorization in section 114 (g) of the ECA Act of 1948, as amended by Public Law 47, which made available 1.0 billion dollars through the Reconstruction Finance Corporation. In order to finance interim ECA expenditures after these funds had been exhausted, the Congress made temporary appropriations for the fiscal year 1950.⁴ Appropriations for the European Recovery Program, as well as for other foreign aid purposes, have been summarized in table VI of chapter II of this report.

Nature of aid to participating countries

The Economic Cooperation Act of 1948 provided for consultation by the Administrator for Economic Cooperation with the National Advisory Council on the types of assistance to be extended and the terms applicable thereto. Under that act 1 billion dollars was specifically authorized to finance loans and guaranties. Of this amount \$972,300,000 was allocated to participating countries in the form of loans, and the remainder was allocated for guaranties. Other assistance took the form of direct grants, and, to a lesser extent, conditional aid, i. e., funds made available to participating countries to the extent that they granted equivalent amounts in their own currencies (called drawing rights) to other participating countries.

In testifying on the second-year program, Secretary Snyder, as Chairman of the Council, recommended to the Congress that the Administrator be authorized, with the advice of the Council, to determine, as to the total amount of aid made available, whether aid should be on a loan basis and in what amount. It was pointed out that, to the extent that participating countries emerged from the

⁴ Public Law 154, Ch. 290, 81st Cong., 1st sess.; Public Law 196, Ch. 378, 81st Cong., 1st sess.; Public Law 246, Ch. 473, 81st Cong., 1st sess.; Public Law 305, Ch. 576, 81st Cong., 1st sess.

295 EXHIBITS

Recovery Program with a burden of fixed charges on existing dollar indebtedness, their ability to attract private capital would be reduced, and that many of these countries had already contracted substantial dollar debts in connection with earlier reconstruction expenditures. If these countries had to obligate themselves for too large amounts of additional loans under the program, the longer-term objectives of that program would be endangered. It was recognized, however, that some of the countries would be in a better position to repay than others. A prudent use of the discretionary power requested by the Administrator and the Council would keep the field open for longrange investment projects to be financed by the private capital market. the Export-Import Bank, and the International Bank.

Accordingly, in the authorizing legislation, Congress did not set aside, as it had done in 1948, any specific amounts available only for loans, but an amount was set aside in the Appropriation Act for that Under Public Law 327, Eighty-first Congress, the Administrator was authorized to issue notes during the fiscal year 1950 for purchase by the Secretary of the Treasury in an amount not exceeding in the aggregate \$150,000,000 for the purpose of extending assistance on credit terms to ERP countries. The form in which assistance provided from appropriated funds would be extended was left to the determination of the Administrator in consultation with the Council.

The following table summarizes ECA allotments by country and type of aid extended for the period April 1948 through September 1949:

Table VII.—ECA allotments to participating countries, April 1948-September 1949, by type of aid

ECA guaranty program

The Foreign Assistance Act of 1948 (Public Law 472, 80th Cong., 2d sess.) had authorized ECA to extend assistance on credit terms and make guaranties out of public debt funds, not exceeding an aggregate of 1 billion dollars. The guaranties were to cover private United States investments in industries and distribution of informational media in the participating countries, made in connection with projects approved by the Administrator and the foreign government concerned. The total amount of guaranties made under this act was not to exceed \$300,000,000.

During the first year of ECA operations, \$27,700,000 was set aside for guaranties, although actual guaranties authorized amounted only to approximately \$3,600,000. These guaranties assured United States companies investing abroad that they would be able to convert local currency receipts from their investments into dollars up to 100 percent of their original investment, if such conversion were not possible

through normal channels.

Public Law 47, signed by the President on April 19, 1949, authorized ECA to make guaranties not exceeding \$150,000,000, of which not to exceed \$10,000,000 in any fiscal year may be made for enterprises producing and distributing informational media, funds therefor to be obtained by issuing notes to the Treasury to the amount of \$150,000,000, less the \$27,700,000 allocated to guaranties under the Foreign Assistance Act of 1948. Since \$3,600,000 of guaranties were made prior to April 2, 1949, ECA was in effect authorized to make up to \$146,400,000 in new guaranties.

The act was also amended to broaden the definition of "investment" to include "the furnishing of capital goods items and related services, for use in connection with projects approved by the Administrator, pursuant to a contract providing for payment in whole or in part

after June 30, 1950...."

Public Law 47, Eighty-first Congress, further amended the provisions of the 1948 Act (Public Law 472, 80th Cong., 2d sess.), relating to guaranties, to read in part that "The guaranty to any person shall not exceed the amount of dollars invested in the project by such person with the approval of the Administrator plus actual earnings or profits on said project to the extent provided by such guaranty." Under this authorization, and after consultation with the Council, ECA announced that the aggregate amount to be covered under guaranties would not exceed 175 percent of the principal sum actually invested. Investors would be limited as to the amount of receipts they could convert in the first five years. Beginning in the sixth year, however, investors would be permitted to convert up to an aggregate of 175 percent of the principal sum invested. Within these limits, conversion may be made at any time during the period of the guaranty, regardless of whether the foreign currency was received as principal, capital gains, or income. The 175 percent limitation does not apply to the guaranties issued to cover the furnishing of capital goods items and related services under section 111 (b) (3) (iv) of the Foreign Assistance Act of 1948, as amended, nor to guaranties as to informa-Guaranties may be written so as to be effective until tional media. April 3, 1962.

EXHIBITS 297

As of September 30, 1949, total guaranties thus far issued by ECA amounted to approximately \$4,700,000. Although the amount of interest in the guaranty provision, evidenced by the number of applications and inquiries received, has shown a steady increase during recent months, the number of guaranty contracts signed to date in relation to such applications and inquiries has not reached the volume anticipated. Experience has shown that this is partly due to the length of time which it takes investors to complete the necessary contractual and business arrangements preliminary actually to making an investment.

All guaranties issued and applications for guaranties filed with regard to industrial projects related to investments in the metropolitan areas of European countries—primarily in the United Kingdom, France, and Italy. Such guaranties issued and the majority of the applications on file cover investments for the purpose of the establishment of industrial enterprises in these countries or the expansion, modernization, or development of existing enterprises. The bulk of the guaranties issued for informational media relate to western Germany.

Intra-European trade and payments

During the 6 months under review, the first year's Intra-European Payments Agreement was revised and a new agreement was signed by the participating countries on September 7, 1949. The effective date of the new agreement was made retroactive to July 1, 1949. The new agreement continued most of the basic features of the previous one. Intra-European balances were estimated bilaterally for the fiscal year and drawing rights made available by the creditors in their own currencies to finance uncovered deficits. These drawing rights in turn would be matched by conditional dollar aid granted to the creditors as part of their total ECA dollar allotment.

Two significant new features were included in the agreement. The debtor countries were to be allowed to use freely in any of the participating countries ⁵ 25 percent of their total estimated drawing rights for the fiscal year 1950. To insure the necessary incentives under the plan, conditional dollar aid matching these so-called multilateral drawing rights would likewise be flexible and would be allotted to the country in which multilateral drawing rights were actually

used.

The second significant modification was designed to take account of the special position of Belgium in intra-European payments. Since Belgium was expected to be a heavy creditor in European trade and her estimated surplus with European countries exceeded her Western Hemisphere deficit, the new agreement limited the total amount of multilateral drawing rights and conditional aid which could be transferred to Belgium. Furthermore, Belgium agreed to finance part of the difference between her estimated deficit with the Western Hemisphere and her surplus with the participating countries by extending long-term credits to her main debtors; namely, the United Kingdom, France, and the Netherlands.

The revaluation of European currencies which took place in September 1949 was expected to have a significant effect on the pattern

⁵ Subject to the qualification with respect to Belgium indicated in the next paragraph.

and volume of intra-European trade. However, until a clearer picture of the impact of devaluation upon the payments pattern could be obtained, it was not possible to judge the direction or amount of change in drawing rights which might be desirable.

Local currency accounts

Assistance extended on a grant basis by the United States under the European Recovery Program has been accompanied by deposits of commensurate amounts of local currency in special accounts by participating countries. In accordance with the Economic Cooperation Act of 1948, these local currency funds, except for the 5 percent set aside for use by the United States, are, to the extent consistent with internal financial stability, available for the stimulation of productive activity and the exploration for and development of new sources of wealth, and for other purposes conducive to attaining the purposes of the act. The policies involved in the use of these funds have been formulated by the ECA in consultation with the Council. The status of counterpart funds under the Foreign Assistance Act of 1948 as of September 30, 1949, is shown in the following table:

Table VIII.—Status of European local currency counterpart accounts under the Foreign Assistance Act of 1948, as of Sept. 30, 1949

¹ Data for France and western Germany revised from those published earlier in the ECA Local Currency Counterpart Funds Report for September 30, 1949. ² Less than \$50,000 equivalent.

Pursuant to section 115 (b) (6) of the Economic Cooperation Act of 1948, the Council, during the 6 months ending September 30, 1949, was consulted by the Economic Cooperation Administration on proposed programs of counterpart releases for Austria, France, Italy, the Netherlands, and the French Zone of Germany.

Note.—"Dollar equivalents" are computed at the actual rates which were used by the respective governments in agreement with the Administrator in making commensurate deposits of local currency. At September 30, 1949, these were all predevaluation rates. Source: Economic Cooperation Administration.

⁶ In October 1949 the Council also approved a broad program for the use of counterpart funds in the United States-United Kingdom Zone of occupation of western Germany.

FINANCIAL DEVELOPMENTS RELATING TO THE UNITED KINGDOM

Earlier reports of the Council have reviewed postwar developments as they affected the financial position of the United Kingdom. The changes which took place in the postwar foreign trade of Britain with the dollar area and in gold and dollar reserves are reflected in chart D.

Here it may be observed that while total dollar imports and exports increased in 1947 over 1946, the disparity in British trade remained. In 1948, British exports continued to increase while her imports decreased substantially, thus somewhat narrowing the gap. Nevertheless, the adverse trade situation with the dollar area continued into 1949. The difference between British exports and imports was financed largely by the use of gold and dollar reserves and by the extension of direct assistance from the United States in the form of loans and grants. Gold and dollar reserves, for example, were reduced from a high of 2.6 billion dollars on December 31, 1946, to 1.6 billion dollars on June 30, 1949. The financing of the dollar deficits of other parts of the sterling area contributed substantially to this reduction in reserves.

As a result of the deterioration in the British dollar position, the United Kingdom on July 14, 1949, announced a new austerity program which would reduce plans for spending in the United States and Canada by \$400,000,000 during the current fiscal year. This decision to slash dollar imports by 25 percent was stated to be necessary to safeguard the sterling area's gold and dollar reserves. At the same time, Commonwealth Governments indicated that they would take

steps to make similar cuts in their dollar imports.

During the course of a trip to Europe in the summer of 1949, the Chairman of the Council, at the request of the British Government, participated with the Canadian Minister of Finance in conversations with the British Chancellor of the Exchequer. At this meeting, the United States and Canadian representatives were advised of the general character of the import cuts which would have to be made by the United Kingdom and the sterling area countries. It was agreed at the meeting to hold further conversations early in September 1949.

The ensuing discussions with the United Kingdom and Canada were held in Washington under the chairmanship of Secretary Snyder. These talks reviewed the steps that both debtor and creditor nations should take to progress toward a self-balancing relationship between the dollar area and the sterling area. The results of the meeting were summarized in a joint communique which was released at the close of the meetings on September 12, 1949, and which is reproduced as

appendix D to this report.

On September 18, 1949, after consultation with the International Monetary Fund, the British Government announced a decision to devalue the pound sterling from \$4.03 to \$2.80, or by 30.5 percent. Gold and dollar reserves, which had reached a low of 1,330 million dollars on the date of devaluation, increased to 1,415 million dollars by September 30, 1949. The devaluation of sterling was followed by adjustments in most of the other principal currencies of the world. The subject of changes in par values is discussed in detail in chapter IV.

CHART D

POINT IV PROGRAM

Since first introduced in his inaugural address, January 20, 1949, the Council has given continuing attention to the financial aspects of the President's Point IV Program, which is designed to facilitate economic development, particularly in underdeveloped areas. In the original statement, the methods whereby this objective could be achieved were outlined in broad terms rather than in specific measures.

The Council gave particular attention to suggested methods of implementing the program, including proposals for guaranties of private investments, the content of investment treaties, and specific measures relative to tax deterrents to international investment.

In connection with the program, emphasis was placed upon the concept that private capital should contribute a major part of the funds required. The history of United States private investments abroad indicates there was a comparatively low level of financing during the 1930's following defaults on foreign government obligations which had resulted from the depression. During World War II, withdrawals of capital from such investments exceeded new capital put in and it was not until 1945 that new direct investments again became important. Since the end of the war, foreign investments have increased rapidly, reaching an annual level of about \$800,000,000 in 1948, but these new investments have been concentrated in a very limited number of fields and in a few countries. In order to achieve an expansion in the amount and fields of investment, it was realized that new incentives were required.

A prerequisite for stimulating foreign investment is the creation of a more favorable climate for investment abroad, including a cooperative attitude on the part of the foreign countries concerned. One step toward the improvement of such a climate would be the negotiation of treaties of friendship, commerce, and economic development between foreign countries and the United States. The principal purpose of such treaties would be to provide an understanding between the governments on the basis of which potential investors would be assured of the security of their property and, in the case of expropriation, of prompt, adequate, and effective compensation. The investor also would be given reasonable opportunity to remit earnings and to withdraw his capital, and would enjoy security in the protection of his person, and nondiscriminatory treatment in the conduct of his business affairs.

In addition it was considered that the United States might encourage private investment abroad by providing guaranties against risks peculiar to foreign investment. The Council therefore recommended, as a coordinated part of the Point IV Program, that the Export-Import Bank seek authority from the Congress to offer guaranties, in consultation with the Council, to United States private capital newly invested in enterprises contributing to economic development in foreign countries. The Export-Import Bank was considered the best medium for carrying out the guaranty program since it had previous experience in the extension of development loans to foreign countries, both for productive purposes and to increase international trade. It was believed that the program should be experimental in nature since

it was difficult to anticipate the types of risks which should be covered

or the effectiveness of guaranties to stimulate investments.

The Council also recommended that the Secretary of the Treasury propose legislation to remove tax deterrents to private foreign invest-Such legislation would liberalize present limitations on the foreign tax credits allowed to American business so that increased tax relief would be accorded where foreign operations result in profits in some countries and losses in others. The present laws pertaining to taxation of corporations having foreign subsidiaries would be liberalized so that a majority stock ownership would no longer be required to be eligible for the tax credit for foreign taxes paid by the foreign subsidiaries. Furthermore, it was proposed that the law be liberalized so that an American citizen abroad may receive the exemption from the United States tax on his foreign-earned income retroactively to the time he first becomes a bona fide resident of a foreign country. It was recommended that estate taxes imposed by foreign governments be allowed as a credit against United States estate taxes similar to the credit under the income tax. Finally, it was proposed that, if practicable, taxes on the profits of foreign branches of domestic corporations should be postponed until the profits are remitted to the United States, similar to the present treatment of foreign subsidiaries.

In July 1949, the guaranty program was presented to the Congress as an experimental program which would give the Export-Import Bank broad and flexible authority to issue guaranties against risks peculiar to foreign investment. In testifying before the Senate Banking Committee, Secretary of the Treasury Snyder, as Chairman of the Council, pointed out that outside capital could help speed the development of underdeveloped areas but that sound and lasting development could be attained only if these areas used their own resources to the fullest extent. He stressed that foreign investment should be undertaken through private channels insofar as possible, particularly because investment by private enterprise is characteristically accompanied by technical assistance in the form of industrial

know-how.

Secretary Snyder also pointed out that the obstacles to investment of private capital abroad spring from several sources, such as exchange restrictions, state control and ownership of industry in foreign countries, and political instability. The United States Government could contribute to the removal of these obstacles through the negotiation of treaties of the type previously discussed, and could supplement the assurances to investors through guaranties of private United States investments abroad.

The Banking and Currency Committees of both Houses of Congress reported favorably on the bills permitting the extension of foreign investment guaranties, but no further action was taken on them during

the first session of the Eighty-first Congress.

In addition to the introduction of bills advocating foreign investment guaranties by the Export-Import Bank, a companion bill relating to the Point IV Program dealt with international technical cooperation. It was the objective of the proposed legislation to enable the United States to participate in programs, in cooperation with other interested governments, for the interchange of technical knowledge and skills which would contribute to the balanced and integrated

EXHIBITS 303

development of the economic resources and productive capacities of economically underdeveloped areas. The House Committee on Foreign Affairs conducted hearings on this bill but postponed action until the second session of the Eighty-first Congress.

EXPORT-IMPORT BANK CREDITS

During the period under review, the Council continued to work closely with the Export-Import Bank to facilitate coordination of the Bank's operations with those of other agencies concerned with foreign financial and monetary matters. New credits authorized by the Bank during this period totaled \$49,758,058.

Chile

During the 6-month period, the Council approved consideration by the Export-Import Bank of a credit to Chile not to exceed \$25,000,000, with a maturity of not more than nine years, to assist in the financing of its import program for the remainder of 1949.⁷

The Bank also approved an increase of \$1,350,000 in an existing line of credit of \$5,350,000 which was extended by the Bank in favor of the Corporacion de Fomento de la Produccion, Chile, in February 1947. This increase was granted to finance expenditures in the United States for hydroelectric power facilities. The additional credit is guaranteed by the Republic of Chile.

Yugoslavia

Before the war, Yugoslavia was a leading producer of nonferrous metals such as bauxite, mercury, copper, lead, and zinc. Damage to the mines and their equipment occurred during the war. There was also a considerable amount of depreciation and obsolescence. In order to assist in rehabilitation, chiefly of the Yugoslav mining industry, application was made to the Export-Import Bank for credits for the purchase in the United States of essential materials and equipment.

The Council approved consideration by the Export-Import Bank of the extension to Yugoslavia of credits up to \$20,000,000 for purchases in the United States of the necessary materials, equipment, and services. On September 9, 1949, the Bank announced an authorization to Yugoslavia of \$20,000,000 in credits, which would be available until December 31, 1950.

Other credits

In August 1949, the Bank announced authorization of credits in the total amount of \$17,900,000 (representing specific allocation of funds from an original commitment of \$50,000,000 made in April 1947), for the rehabilitation and development of Mexican railroads. These funds are designed to further a general program of transportation development for which the Bank had previously lent \$62,000,000, under this and other credits, of which \$22,000,000 had been repaid.

The Bank authorized a credit of \$4,000,000 to the Liberia Mining Co. to assist in financing the development of high-grade iron-ore deposits and the construction of a railroad and ore-handling and

⁷ The authorization of a credit of \$25,000,000 was announced by the Board of Directors of the Export-Import Bank on Oct. 7, 1949, with \$15,000,000 to be made available immediately and additional advances of up to \$10,000,000 to be made on demonstration that they are necessary to pay for 1949 imports agreed to be essential. Funds advanced under the credit will be repayable in semiannual installments beginning Apr. 30, 1952, and ending Oct. 31, 1959, and will bear interest at the rate of 3½ percent per annum.

storage facilities. This loan represented about one-half of the pro-

jected financing costs of the project.

As previously reported by the Council, as of April 1, 1949, credits of \$51,000,000 had been authorized out of the Bank's earmark of \$100,000,000 in favor of the State of Israel. On September 8, 1949, the Bank announced an allocation from the \$49,000,000 still available of \$2,350,000 for United States goods and services to be used in connection with the improvement and expansion of the existing ports of Israel.

The Export-Import Bank also acted as administering agency for the supplementary loan agreements with participating ERP countries signed during the period under review. The terms and conditions of these loans, agreed upon by ECA after consultation with the Council, include an interest rate of 2½ percent per annum payable semiannually from 1952, and principal payments beginning in 1956. The loans mature in 1983.

As of September 30, 1949, the resources of the Export-Import Bank were distributed as follows:

[In millions of dollars]	
Total Lending Authority	\$3,500. 0

¹ Cancellations and expirations deducted. Numerous small exporter-importer loans extended by the Bank, July 1, 1945, through Sept. 30, 1949, are excluded. Also excluded are Mexican authorizations of \$30,000,000 and a Peruvian authorization of \$400,000 approved prior to June 30, 1945, recorded on Export-Import Bank books subsequent to June 30, 1945.
¹ Credits extended by Export-Import Bank under general approval of the Council. Hungarian credit of \$7,000,000 canceled Apr. 2, 1947.
¹ Excludes participation by private banks.
¹ For financing tobacco purchases.
¹ For financing tood purchases.
¹ Revolving credits.

OTHER FINANCIAL PROBLEMS

Financial terms of military assistance to Iran and the Philippines

When the financial aspects of the Mutual Defense Assistance Program were originally referred to the Council, the Council was of the view that such assistance should be provided on a grant basis to countries receiving ECA assistance and that separate determinations should be made for countries outside of the ECA program. Iran and the Philippines were not included in the original program under which the Atlantic Pact countries were to receive military aid. was later determined that these two countries would participate in the Mutual Defense Assistance Program, the Council expressed the opinion that military assistance to them should be provided on a grant basis.

Additional stabilization assistance to Mexico

On June 17, 1949, Secretary of the Treasury Snyder, after consultation with the Council, announced the signing of an agreement supplementing the United States-Mexican Stabilization Agreement entered into in May 1947. Mexico had previously utilized \$37,000,000 of the \$50,000,000 available under the existing Stabilization Agreement. The new agreement increased to \$25,000,000 the balance available from the United States Stabilization Fund for the purchase of Mexican pesos to stabilize the United States dollar-Mexican peso rate of exchange. The agreement was signed following acceptance by the International Monetary Fund of a new par value of 8.65 Mexican pesos per dollar. (See ch. IV.) Secretary Snyder stated that any operations under the agreement with Mexico would be closely coordinated with the activities of the International Monetary Fund in order to contribute to the efforts of the Fund to stabilize the exchange rate structure of its members.

Withdrawal of Commodity Credit Corporation agreement with the Netherlands Indies Government

In June 1948, the Council reviewed the proposed extension of a \$20,000,000 credit by the Commodity Credit Corporation to Indonesia for the purchase of incentive goods (textiles, food, household articles, etc.), to be used to stimulate the production and procurement of copra and palm oil for export. A year later the Secretary of Agriculture advised the Council that no funds had been advanced under the proposal and that the Board of Directors of the Commodity Credit Corporation had resolved to withdraw the offer to enter into the agreement. During the period, changes in the world fats and oils supply situation obviated the need for the proposed agreement.

United States-Brazil economic discussions

Following submission of the report of the Joint Brazil-United States Technical Commission, the Governments of each country considered plans to foster the economic development of Brazil. During the spring of 1949, President Dutra returned the visit made by President Truman to Brazil in August 1947. The two Presidents discussed at length the desirability of fostering economic development and social progress through the mutually beneficial interchange of technological data and trained specialists of all types, as well as through financial and economic cooperation. President Dutra mentioned the need of The two Presidents recognized foreign private investment in Brazil. the important role of private investment in economic development and social progress and accordingly instructed technical experts of their respective Governments to commence immediately the negotiation of an appropriate treaty that would stimulate the mutually beneficial flow of private investment. It was also fully agreed that a comprehensive joint study of the tax relations between the two countries would be helpful. The two Presidents recognized the possibility of financing through public lending agencies appropriate development projects not suited to private financing, of the types which have been accepted for financing by the International Bank for Reconstruction and Development and the Export-Import Bank.

IV. ACTIVITIES OF THE COUNCIL FROM APRIL 1, 1949, TO SEPTEMBER 30, 1949, RELATING TO THE INTERNATIONAL MONETARY FUND AND THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

The National Advisory Council, in accordance with statutory authority, continued to coordinate the activities of the United States representatives of the Fund and the Bank with those of other agencies of the Government, by consulting and advising with them on major problems arising in administration of the Fund and the Bank. The United States Executive Directors of these institutions, or their Alternates, have attended the Council's meetings regularly, and have participated continuously in the work of its Staff Committee.

FOURTH ANNUAL MEETINGS OF THE FUND AND THE BANK

The Boards of Governors of the Fund and the Bank held their fourth annual meetings in Washington, D. C., September 12 to 16, 1949. The Secretary of the Treasury, John W. Snyder, as United States Governor of both institutions, attended. Willard L. Thorp, William McChesney Martin, Jr., and Frank A. Southard, Jr., were appointed temporary United States Alternate Governors for the purpose of these meetings. The United States Alternate Executive Directors also participated in these meetings, as did representatives of the constituent agencies of the Council.

The principal matters considered by the Boards of Governors were

as follows:

(1) The Boards of Governors discussed and accepted the annual reports, the financial statements and reports on audit, and the 1949 administrative budgets, and elected officers and a joint procedures

committee for 1949-1950.

(2) The application of the Republic of Haiti for membership in the two institutions was approved, providing for a quota in the Fund of \$2,000,000, with a like amount as a subscription to the Bank. Membership is open to Haiti until March 31, 1950, with the Executive Directors empowered to extend this period until September 30, 1950, if they deem such action warranted.

(3) The Boards of Governors also extended until March 31, 1950, the period in which the Republic of Liberia may accept membership, and empowered the Executive Directors further to extend the period,

but not beyond October 1, 1950.

(4) At the Fund meetings, the Governors adopted a resolution referring to the Executive Directors for further study the proposal by South Africa concerning gold sales at premium prices. They also discussed questions of exchange and monetary policy, exchange restrictions, and monetary reserves.

(5) A report on relations with the International Trade Organization and the Contracting Parties to the General Agreement on Tariffs and Trade was submitted to the Board of Governors of the Fund for

information.

(6) The Governors of the Bank reviewed the report of the Ad Hoc Committee (appointed at the third annual meeting to consider provisions relating to duties and remuneration of the Executive Directors), and referred the matter back to the Committee for further study.

(7) The Governors of the Bank approved the report of the Executive Directors postponing the election of a new Advisory Council.

(8) The Governors of the Bank also approved the report of the Executive Directors on the allocation of the Bank's net income for the

fiscal year ending June 30, 1949.

At the closing session, the Governor of India was elected Chairman for the coming year, and the Governors of China, France, United Kingdom, and the United States were elected Vice Chairmen. It was decided to hold the fifth annual meetings in Paris in the month of September 1950.

MEMBERSHIP CHANGES IN THE FUND AND THE BANK

During the period under review, one new country, Thailand, was admitted to membership in the Fund and the Bank. At the third annual meetings in Washington in September 1948, the Boards of Governors accepted the request of Thailand for membership, providing for a quota in the Fund of \$12,500,000, with a like amount as a subscription to the Bank. Thailand formally became a member of the two organizations on May 3, 1949.

Favorable action by the United States representatives with respect

to this application was taken with the approval of the Council.

On September 30, 1949, 48 countries were members of the Fund and the Bank. The members, with their quotas and capital subscriptions as of September 30, 1949, are listed in appendix E.*

ORGANIZATIONAL CHANGES

On May 18, 1949, Mr. Eugene R. Black, then United States Executive Director, was elected President of the Bank, succeeding Mr. John J. McCloy, who resigned to accept the post of United States High Commissioner for Germany. Mr. Black assumed his new duties on July 1, 1949.

THE FUND

During the period under review, the Fund continued to provide a number of its member countries with technical assistance, as well as, in appropriate instances, necessary foreign currency to meet balance-of-payments deficits on current account. As will be noted in the following section dealing with "par values," the Fund participated actively in the extensive realignment of currencies that occurred in the latter half of September 1949.

Par values

On May 24, 1949, the Fund announced the establishment of an initial par value for the Yugoslav dinar at 50 dinars per United States dollar, the rate proposed by the Government of Yugoslavia. On June 17, 1949, the Fund also announced that it had concurred in the request of the Government of Mexico for the establishment of a new par value for the peso. The new par value of 8.65 pesos per United States dollar replaced the initial par value of 4.855 pesos per United States dollar, established on December 18, 1946, by agreement between Mexico and the Fund. Transactions at this initial parity

^{*}Omitted in this exhibit; see note at end of exhibit.

had been suspended by the Bank of Mexico on July 22, 1948. United States Executive Director, acting with the approval of the Council, concurred in the Fund action on the proposals of both Yugoslavia and Mexico.

Currency readjustments: September 1949

In December 1946, the International Monetary Fund and member governments agreed on the establishment of initial par values for their currencies based on existing exchange rates, even though, as the Executive Directors of the Fund recognized in their first Annual Report ". . . in some cases the initial par values that are established may later be found incompatible with the maintenance of a balanced international payments position at a high level of domestic economic activity." There were cogent reasons for this decision. It would have been premature to attempt a general revision of exchange rates at that time, in view of the drastic changes in the structure of world trade and the disruption of the internal economies of many member countries wrought by the war.

As economic advances were made as a result of the internal efforts of the countries concerned as well as of the United States foreignassistance program, the desirability of an eventual revaluation of currencies gradually became more apparent. In its Semiannual Report for the period October 1, 1948-March 31, 1949, the National Advisory Council stated that ". . . in 1948 a general revaluation of the European exchange rates was inadvisable in view of the possible internal repercussions of devaluation on the participating countries in a period when their economies still exhibited serious inflationary tendencies, while their levels of production were not adequate to maintain an expanded volume of international trade. In many of the participating countries these conditions no longer obtain, since substantial progress has been made toward recovery in their levels of production It is the Council's opinion that in some cases the revaluation of currencies may constitute an important means of bringing about the desired expansion of exports to the dollar area which, along with other appropriate measures, will contribute to more normal methods of financing after 1952." Similarly, in their Annual Report for the year ending April 30, 1949, the Executive Directors of the International Monetary Fund declared that "Where a price reduction . . . is necessary to expand exports, it would in many cases seem possible only through an adjustment in the exchange rate." 8

In the period under review, it was becoming widely accepted that a general revision of European exchange rates was an essential step in the direction of creating freer intra-European and world trade and restoring equilibrium in European balances of payments at a reasonable level. European export prices in terms of dollars had become less competitive than United States prices for the same types of goods, and in the absence of depreciation it was becoming increasingly difficult for European countries to maintain, much less expand, their exports to the dollar area and to compete with dollar-area goods in their domestic and third markets. There was serious danger that

Similar views had been expressed by other international bodies such as the Organization for European Economic Cooperation and the Economic Commission for Europe.

unless such action was taken, the marked disparities in cost-price structures existing between the soft-currency-area countries and the dollar-area countries on the one hand, and among the soft-currency-area countries themselves on the other, would tend to become set, the strains of altered creditor-debtor relationships increasingly burdensome, and the distortions of international trade and the disequilibria in European balances of payments increasingly intractable.

The decline in the exports of European countries to the dollar area and the depletion of the United Kingdom's gold and dollar reserves during 1949 underlined the need to adopt remedial action. than six months, from March 31 to September 18, 1949, the United Kingdom's gold and dollar reserves fell by more than \$500,000,000. On September 18, the International Monetary Fund announced that the United Kingdom had proposed and the Fund had concurred in a change in the par value of the pound sterling from the previous rate of one pound sterling to \$4.03, to one pound sterling to \$2.80. Twenty-five other countries had announced adjustments in their exchange rates by September 30, with the extent of devaluation varying from 9.1 percent in the case of Canada, to 30.5 percent by most countries within the sterling area (see table X). The Fund was consulted on, and approved, the adjustments proposed by member countries, and the United States Executive Director, acting in accordance with policy directives previously formulated by the Council, concurred in the action of the Fund.

The Council recognizes that this readjustment of exchange rates does not constitute a cure-all for the difficult and complex problems currently faced in international payments. But it helps to clear the way by removing some of the obstacles to the effective functioning of a world price system. It may contribute to a reduction in the European dollar deficit by an expansion of exports from the European countries to the Western Hemisphere and facilitate the relaxation of barriers to multilateral trade.

official buying and selling rates.

Exchange restrictions

On May 27, 1949, the Fund reported results of consultations with the Government of Ecuador on Ecuador's exchange system, and related subjects of credit and monetary policy. As a result of similar consultations with the Fund in June 1947, Ecuador had made certain modifications in her exchange control system. In the May consultations it was understood that Ecuador would continue to maintain for another year her present exchange controls but that during this period Ecuador would consult with the Fund regarding modifications which might properly be made at the end of that time.

Price of gold

The Secretary of the Treasury, at the fourth annual meeting of the International Monetary Fund, in connection with consideration of the resolution proposed by South Africa concerning gold sales at premium prices, reiterated the established position of the United States Government with respect to the maintenance of the dollar price of gold. his capacity as United States Governor, the Secretary stated, during

<sup>Free market rate for imports.
The Belgian Congo franc remains at par with the Belgian franc.
The Finnish change shown here followed closely an earlier devaluation (from 0.735 to 0.625 cents per markka), on July 4, 1949, and thus represents a total devaluation of 41 percent during recent months.
Rates shown are those for trade transactions. Under the official free market system used in France, the rates referred to here are technically flexible, though they may be held steady for relatively long periods. All local currencies of French dependencies are pegged to the French franc, except (1) the rupee of French possessions in India, which is maintained at par with the Indian rupee; and (2) the Djibouti franc, which retains its old dollar parity of 0.47 cents.
*Under the exchange certificate system used in Greece, the rates referred to here are technically flexible, but for over a year prior to the current devaluation, fluctuations in the old rate had been held to less than 1 percent in either direction.
*Under the official free market system used in Italy, the rates referred to here are technically flexible, though they may be held steady for relatively long periods.
*The Indonesian guilder remains at par with the Netherlands guilder, but the Surinam guilder retains the old dollar parity of 53 cents.
*The change shown here followed closely a minor adjustment (from 4.0124 to 4.0 cents per escudo), on August 8, 1949. Portugal is not a member of the International Monetary Fund and has no par value. Rates shown are mid rates between the official buying and selling rates.
*Sweden is not a member of the Fund and has no par value. Rates shown are average rates between the official buying and selling rates.</sup>

the course of the discussion "I have said on many occasions and I must say again that I do not perceive any considerations of monetary policy which would justify me in proposing to my Government a change in the dollar price of gold." 9

Repurchase of Fund drawings

Article V, section 7 of the Fund's Articles of Agreement provides for the compulsory repurchase of Fund holdings of a member's currency

under specified conditions.

During May 1949, Costa Rica became the first country to repurchase some of its own currency from the Fund. This transaction involved Costa Rican colones equivalent to 874,000 dollars, and was effected through a Costa Rican payment to the Fund of 855,000 dollars, and gold to the value of 19,000 dollars. In August 1949, Belgium repurchased from the Fund Belgian francs equivalent to 946,500 dollars, with a payment of 35,000 dollars, and gold to the value of 911,500 dollars. During September 1949, Nicaragua repurchased for 500,000 dollars the total amount of cordobas which it had sold to the Fund in As a result of this transaction, the Fund's holdings of cordobas reverted to the level in existence prior to the original Nicaraguan drawing.

$Exchange\ transactions$

During the 6 months, April 1, 1949, through September 30, 1949, the Fund sold \$21,000,000 to three of its member countries. transactions increased total currency sales of the Fund to date to the equivalent of \$734,600,000. Fund sales of United States dollars for member currencies have been almost entirely to non-ERP countries since the start of the European Recovery Program in April 1948.

The following table presents a detailed break-down of currency

sales through September 30, 1949:

Table XI.—Currency sales of the International Monetary Fund from Apr. 1, 1947. to Sept. 30, 1949

THE BANK

During the 6 months under review, the International Bank made \$76,500,000 in new loan commitments to four of its member countries. The United States Executive Director or his Alternate consulted with the Council with respect to each of these loan applications.

As a further aid to member countries, the International Bank announced an expanded program of technical assistance for economic development. The Bank indicated that it would be prepared to help member countries in making comprehensive surveys of their resources and in working out appropriate long-term investment programs; to work closely with potential borrowers in the analysis and planning of specific projects for Bank financing; and to assist in formulating and putting into effect practical measures to strengthen the financial institutions and practices of its member countries and to encourage productive investment from other sources. The Bank, however, emphasized the importance of action on the part of the less-developed countries to create a sound foundation for economic development.

Loans and disbursements

On July 29, 1949, the Bank granted a loan of \$15,000,000 to the Finance Corporation for National Reconstruction (Herstelbank), of the Netherlands. This loan was specifically made to finance imports of equipment for the reconstruction or modernization of plants in various industries. The loan, guaranteed by the Kingdom of the Netherlands, extends for a period of 15 years, and carries an interest rate of 3 percent, plus the usual 1 percent commission for the Bank's special reserve. Amortization payments, calculated to retire the loan by maturity, will start in the fourth year. The Bank announced that

this loan was made in accordance with one of its main purposes—to aid in the reconstruction of economies of member nations and to encourage the development of their productive facilities and resources. The Bank also stated that by assisting in financing projects which involve permanent additions to Europe's productive capacity, the loan followed the Bank's policy of supplementing the European Recovery Program.

On August 1, 1949, the Bank announced a loan of \$12,500,000 to the Bank of Finland to finance imports of equipment and materials required for the reconstruction and modernization of Finland's woodworking industries, for an electric power development program, and for expanding production of limestone powder for agriculture. The terms of this loan, which was guaranteed by the Government of

Finland, were similar to those applicable to the Herstelbank.

On August 18, 1949, the Bank granted a loan of \$34,000,000 to India for the reconstruction and development of the railways owned and operated by the State. Proceeds of this loan will be used to finance part of the purchase price of locomotives, boilers, and spare This loan—the first to be granted by the Bank to a member country in Asia—carried terms similar to those in the two preceding instances, except that amortization payments will start on August 15, 1950. On September 29, 1949, the Bank announced an additional loan of \$10,000,000 to India, to finance part of the cost of agricultural machinery needed for land clearance and reclamation and thereby to increase the production of grain in India. This loan was for a term of seven years and carried an interest rate of 2½ percent, plus the usual 1 percent commission. Amortization payments, calculated to retire the loan by maturity, will start on June 1, 1952.

On August 19, 1949, the Bank granted a loan of \$5,000,000 to the Caja de Credito Agrario, Industrial y Minero of Colombia to finance the purchase of agricultural machinery. This loan, guaranteed by the Republic of Colombia, is for a term of seven years, and carries an interest rate of 2½ percent, plus the customary 1 percent commission. Semiannual amortization payments, beginning May 15, 1952, are designed to retire the loan by maturity on November 15, 1956. The agricultural equipment to be purchased with the proceeds of this loan should enable Colombia to increase farm production and thus meet an expanding domestic consumption, while reducing imports of foodstuffs

and staples with a consequent saving of hard currency.

From May 9, 1947, when the Bank announced its first loan, through September 30, 1949, total loan commitments of the International Bank aggregated somewhat more than \$726,000,000, of which \$678,000,000 had become effective. As shown in the following tabulation, four-fifths of this latter amount had been disbursed by September 30, 1949:

Table XII.—Status of International Bank loans as of Sept. 30, 1949

Legislation

In June 1949, the United States Congress enacted, and on the 29th day of that month the President approved, legislation amending provisions of the National Bank Act and the Bretton Woods Agreements Act applicable to securities of the International Bank (Public Law 142, Ch. 276, 81st Cong., 1st sess.). This legislation was designed to remove certain requirements which might interfere with the Bank's financing operations and thereby limit its effectiveness in carrying out the purposes for which it was established. The National Bank Act was amended to permit national banks and State member banks of the Federal Reserve System to deal in and underwrite International Bank securities subject to certain prescribed limitations as to amount. The Bretton Woods Agreements Act was amended to provide that any securities issued by the International Bank and any securities guaranteed by the Bank as to both principal and interest shall be deemed exempted securities under the Securities Act of 1933 and the Securities Exchange Act of 1934. Public Law 142 also authorized the Securities and Exchange Commission to require the Bank to file annual and other reports with it and, in consultation with the Council, to suspend these exemptions.

Fiscal operations

For the fiscal year ending June 30, 1949, the International Bank had a net income of about \$10,600,000, exclusive of special reserve commissions of \$5,000,000. For the three months ending September 30, 1949, the Bank had an income of nearly \$3,200,000, exclusive of over \$1,300,000 paid into its special reserve. As of September 30, 1949, the Bank had an earned surplus of over \$16,800,000, plus about \$9,400,000 in its special reserve.

¹ Loan guaranteed by the United States of Brazil.
2 Agreements become effective after the Bank has received certain certificates and documents, and has notified the borrower and guaranter of its acceptance of such evidence.
3 Loans guaranteed by the Government of Mexico. Nacional Financiera and Comision Federal de Electricidad are joint borrowers.
4 Loans guaranteed by the Kingdom of the Netherlands.
5 Loan guaranteed by the Government of Finland.

Source: International Bank for Reconstruction and Development.

Future lending

On September 30, 1949, the Bank had uncommitted loanable dollar funds amounting to approximately \$320,000,000, and was engaged in the investigation of numerous requests for loans throughout the world. After having completed the immediate postwar phase of its activities, the Bank has entered upon a program of developmental loans to assist nations to obtain the fullest utilization of their own resources.

APPENDIX A

AMENDMENTS OF THE NATIONAL BANK ACT AND THE BRETTON WOODS AGREEMENTS

(Public Law 142, Ch. 276, 81st Cong., 1st sess.)

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraph seventh of section 8 of the National Bank Act, as amended (U. S. C., title 12, sec. 24), is amended by adding to the end thereof the following new sentence: "The limitations and restrictions herein contained as to dealing in and underwriting investment securities shall not apply to obligations issued by the International Bank for Reconstruction and Development which are at the time eligible for purchase by a national bank for its own account: *Provided*, That no association shall hold obligations issued by said bank as a result of underwriting, dealing, or purchasing for its own account (and for this purpose obligations as to which it is under commitment shall be deemed to be held by it) in a total amount exceeding at any one time 10 per centum of its capital stock actually paid in and unimpaired and 10 per centum of its unimpaired surplus fund."

SEC. 2. The Bretton Woods Agreements Act, as amended (U. S. C., title 22,

secs. 286-286k), is amended by adding at the end thereof a new section to be numbered section 15 and to read as follows:

"Sec. 15. (a) Any securities issued by International Bank for Reconstruction and Development (including any guaranty by the bank, whether or not limited in scope), and any securities guaranteed by the bank as to both principal and interest, shall be deemed to be exempted securities within the meaning of paragraph (a) (2) of section 3 of the Act of May 27, 1933, as amended (U. S. C., title 15, sec. 77c), and paragraph (a) (12) of section 3 of the Act of June 6, 1934, as amended (U. S. C., title 15, sec. 78c). The bank shall file with the Securities and Exchange Commission such annual and other reports with regard to such securities as the Commission shall determine to be appropriate in view of the special character of the bank and its operations and necessary in the public interest or for the protection of investors.

"(b) The reports of the National Advisory Council provided for in section 4

(a) (6) of the Bretton Woods Agreements Act shall also cover and include the

EXHIBITS 317.

effectiveness of the provisions of section 15 (a) of this Act and the exemption for securities issued by the bank provided by section 8 of the National Bank Act in facilitating the operations of the bank and the extent to which the operations of the bank may assist in financing European recovery and the reconstruction and development of the economic resources of member countries of the bank and the recommendations of the Council as to any modifications it may deem desirable in the provisions of this Act."

Sec. 3. The Securities and Exchange Commission acting in consultation with the National Advisory Council on International Monetary and Financial Problems is authorized to suspend the provisions of section 15 (a) of the Bretton Woods Agreements Act at any time as to any or all securities issued or guaranteed by the bank during the period of such suspension. The Commission shall include in its annual reports to Congress such information as it shall deem advisable with regard to the operations and effect of this Act and in connection therewith shall include any views submitted for such purpose by any association of dealers registered with the Commission.

Approved June 29, 1949.

APPENDIX D

Joint Communique of United States, United Kingdom, and Canada—September 12, 1949

- 1. Representatives of the United States, the United Kingdom, and Canada have met during the past week to examine the trade and financial relationships between the sterling area and the dollar area. The pound and the dollar are the two principal world trading currencies. While the development of a satisfactory balance of payments between the two areas is a matter of fundamental concern to the democratic world; it involves many problems which concern in the first instance the governments which are the centers of these two currency systems. The present discussions were held to examine these problems. It was recognized that the task of working out conditions under which world trade can develop stadily and in increasing freedom will require a strenuous and sustained effort, not only on the part of the United States, the United Kingdom, and Canada, but also by all other countries desiring the same objectives.
- 2. It was agreed that the common aim is to work toward an ultimate solution which will maintain employment and establish equilibrium of international trade on a mutually profitable basis at high levels. These objectives and general course of action have already been set forth in the United Nations Charter, the Bretton Woods Agreements, and the Havana Charter for an International Trade Organization. It was the broad purpose of the present meetings to explore, within this general framework, various specific measures which the three Governments might take to prevent a serious break-down in the dollar-sterling relationships which would have led to a crippling limitation of dollar imports into the sterling area and to hasten the achievement of those objectives.
- 3. These conversations have carried forward the consultations initiated in London during July 8-10. They have resulted in a clear understanding of the character of the difficulties to be faced and an increasing realization that a fully satisfactory solution will necessitate continuing efforts in many directions. In the course of these conversations it has become possible to discuss with complete frankness specific problems and the types of measures which will have to be taken if the three countries are to achieve their common purpose.
- 4. In the early stages of the discussion, attention was given to the immediate problem confronting the United Kingdom and the rest of the sterling area as a result of the rapid decline of gold and dollar reserves. Note was taken by the three Governments of the emergency action which sterling countries have decided to take to meet this situation. These measures are not pleasant ones; they will cause difficulties and sacrifices for everyone concerned. Nevertheless, they are a temporary necessity, and are recognized as such by all three Governments.
- 5. The Ministers were in complete agreement that no permanent solution to the problem could be found in the emergency steps contemplated. A more funda-

mental attempt would have to be made by all concerned to expand the dollar earnings of the sterling area and to increase the flow of investment from the North American Continent to the rest of the world, including the sterling area.

6. This more fundamental attempt would involve both separate actions of the three countries operating individually, and joint action by the three acting in cooperation with each other. In approaching these possibilities of individual and joint action on the sterling-dollar problem, there was common agreement that this action should be based on the assumption that extraordinary aid from the North American Continent would have come to an end by the middle of 1952. This would require that the sterling area increase its dollar earnings so as to pay its way by 1952. This would require in the sterling area the creation of appropriate incentives to exporters to the dollar area and a vigorous attack upon costs of production to enhance the competitive position of sterling-area products. Maximum efforts would be made to direct exports to the dollar area and build up earnings from tourism and other services. As a part of this export campaign by the sterling-area countries, it was recognized that an essential element was the creation of a feeling of confidence on the part of sterling-area exporters. must feel that they will be afforded the opportunity to remain in the markets of the United States and Canada in which they will have gained a place, and that the minimum of difficulties will be placed in their way in entering those markets.

On their part the creditor countries undertook to facilitate, to the greatest extent feasible, an expansion of dollar earnings by debtor countries, including the sterling area. It was agreed that the United States and Canada should reduce obstacles to the entry of goods and services from debtor countries, in order to provide as wide an opportunity as possible for those countries to earn dollars through the export of goods and the provision of services, including tourism. It was recognized that such a policy would be in the interest of producers in the United States and Canada, for only in this way can the future level of trade provide adequately for those sectors of the American and Canadian economies

which depend in considerable part upon foreign markets.

7. The discussion of possible individual and joint actions, both long-run and short-run, ranged over a wide field. In addition to the question of dollar earnings of the United Kingdom and the rest of the sterling area, mentioned above, the Ministers gave special attention to the following subjects:

1. Overseas investment.

2. Commodity arrangements and stock-piling.

Limitations on items which may be financed under present ECA procedures.

4. Customs procedures.

5. Tariff policy.

6. Liberalization of intra-European trade and payments.

7. Sterling balances.

8. Petroleum.

9. Shipping.

- 10. Provisions for continuing consultation.
- 8. A working group on overseas investment reviewed both recent experience and future prospects for the flow of productive investment, both private and public, from North America to overseas areas, especially underdeveloped countries. It was agreed that a high level of such investment could make an important contribution toward reducing the sterling-dollar disequilibrium and that every aspect of this problem should be explored on a continuing basis. In order to initiate this work, the President's Committee for Financing Foreign Trade will be asked immediately to explore possible lines of action in cooperation with corresponding groups of British and Canadian financial and business representatives. While dealing with all aspects of private and public investment, the Committee will be expected to address itself especially to the problem of incentives and of providing a suitable environment for a high level of private investment.
- 9. A working group on commodity arrangements and stock-piling gave special attention to rubber and tin. The Canadian representatives stated that the Canadian Government was prepared to take steps to increase reserve stocks of tin and rubber in Canada. The United States representatives reported that the United States Government was prepared to open to natural rubber a substantial additional area of competition, including a modification of the Government order

relating to the consumption of synthetic rubber. The United States would review its stock-piling program, with particular reference to rubber and tin.

- 10. Special attention was given by another group to the practical difficulty being experienced by the United Kingdom in making fully effective use of its ECA aid to cover its dollar deficit. This difficulty arises out of the fact that, although the United Kingdom needs dollars to pay for goods in the United States, to make settlements with other countries, to pay for services, and for other purposes, the types of transactions which may be financed by ECA dollars have been definitely limited. It has been agreed that, in order to carry out the basic purposes of the Economic Cooperation Act, it will be necessary for the United Kingdom to finance with its share of ECA funds a wider range of dollar expenditures than has hitherto been eligible, both within and outside of the United States. After careful examination of the dollar expenditures proposed to be made or authorized by the United Kingdom, it appears that eligibility requirements can be broadened to the extent required within the limits set by the Economic Cooperation Act. This would broaden the use but not increase the amount of ECA funds allocated to the United Kingdom.
- 11. In the consideration of measures which creditor countries might take to reduce barriers to trade, it was recognized that customs procedures may create obstacles, psychological as well as actual. Technical discussions of this subject disclosed that the United States, through administrative action and proposed legislation, was already contemplating constructive steps in this field. Canadian representatives stated that the Canadian Government would undertake a further review of the administrative operation of its Customs Act in the light of these discussions. As to tariff rates, it was noted that high tariffs were clearly inconsistent with the position of creditor countries. There had already been significant and substantial reductions in U. S. tariffs during the last fifteen years. The policy of the United States Government was to seek further negotiation of trade agreements through which additional reductions might be made, within the framework of the Reciprocal Trade Agreements 'Act.
- 12. There was agreement that one of the ways in which the competitive position of United Kingdom products might be improved was by a widening of the area in which such products competed freely with those of other countries. In this connection as an initial step toward a more general liberalization the United Kingdom delegation outlined its proposals for liberalizing trade with countries with which it did not have balance-of-payments difficulties, and raised the question whether the provisions of section 9 of the Anglo-American Financial Agreement, and article 5 of the Anglo-Canadian Financial Agreement presented an obstacle to such a plan. It was the view of the United States and Canadian delegations that such liberalization of United Kingdom import regulations should be considered since the United Kingdom shortage of dollars should not in itself force the United Kingdom to reduce its purchases from areas with which it does not have a shortage of means of payment. It was agreed that any United Kingdom import regulations as they affect United States and Canadian products would be the subject of continuing review by representatives of the three Governments through continuing facilities for consultation.
- 13. (a) A further subject which was discussed was the United Kingdom liability represented by the sterling balances of other countries. A large number of countries have been accustomed to hold either all or a part of their foreign-exchange reserves in the form of sterling. The existence and availability of such holdings are an integral feature of the widespread multilateral use of sterling for the purpose of financing international trade. One of the problems of the postwar period has been the existence of exceptionally large accumulations of sterling which were built up, mainly during the war, as the result of payments by the United Kingdom for goods and services purchased overseas in furtherance of the common war effort. In June 1945 these balances amounted to \$13½ billion. Since then there have been considerable fluctuations both in the total and in the holdings of individual countries, though the amount outstanding at the end of 1948 was approximately the same as at June 1945.

(b) In principle the whole of these balances represents a charge on United Kingdom production of goods and services. In practice, however, a substantial proportion will continue to be held as reserves by the countries concerned. To the extent that the balances are liquidated, some proportion of United Kingdom

production of goods and services is used to discharge this liability instead of to

pay for current imports of goods and services.

(c) This whole problem in its various aspects, including the necessity to provide capital goods for development, was discussed in a preliminary way on the basis of prior technical examination by the experts of the three Governments. It was agreed that this was one of the subjects which concerned other countries and would require further study.

- 14. Investigation of the ways in which the sterling area could move toward a position in which it could earn its own way led to the discussion of other special problems, including petroleum and shipping—two important elements in the sterling area balance-of-payments picture. The United Kingdom representatives set forth the facts of the very large dollar deficit which the sterling area presently incurs because of oil transactions, and their desire to reduce this deficit to the minimum possible level. It was mutually recognized that the question of oil production and refining, and geographical distribution raised problems of extreme complexity involving the protection of legitimate interests of the major producing countries and companies. The Ministers recognized that these two questions of petroleum and shipping could not be resolved in the short time available to them, and that further study would be required. In the case of petroleum they agreed to appoint representatives to analyze the facts and to provide the basis for subsequent discussions.
- 15. There has been agreement on the objective toward which policies should be. directed and agreement on certain immediate steps which will be taken to bring that objective nearer. There are, however, as has been emphasized, a number of questions requiring closer examination than this short conference has allowed. is proposed, therefore, to continue the examinations, initiated during the conference, of questions on which it is hoped that useful understanding can be reached under the direction of the present Ministerial group. These arrangements for continuing consultation—supplementing the usual channels of communication between governments—will be used to keep under review the effectiveness of actions already agreed upon and to prepare, for governmental consideration, measures which could carry further those adjustments which are considered to be In establishing these arrangements for continuing consultation, the three Governments wish to emphasize that these arrangements underline rather than diminish their interest in the development of economic cooperation within the entire community of western nations. The tripartite arrangements will not in any way encroach upon, or detract from, the area of competence of the OEEC and other existing organs of international economic collaboration. trary, those arrangements for continuing consultation, by contributing materially to the solution of problems which today adversely affect the working of the entire OEEC group and yet are not susceptible of solution within that group, will facilitate the progress of economic collaboration in the wider field.
- 16. In summary the Ministers of the three countries concerned are satisfied that a real contribution to the solution of the sterling-dollar difficulties has been made by the conclusions recorded above. They are confident that, with sustained efforts on all sides and with the seizure of every opportunity by sterling-area exporters to enter into and remain in dollar markets which are open to them, there is the prospect of reaching a satisfactory equilibrium between the sterling and dollar areas by the time exceptional dollar aid comes to an end.

APPENDIX F

The Gold Content of the Dollar and the Price of Gold

MEMORANDUM FOR THE PRESS

The following statement was issued in response to inquiries at Secretary Snyder's press conference of Wednesday, October 5, 1949, concerning the legal authority to change the gold content of the dollar and the Treasury's price for gold. The Secretary again stated that he had no intention of proposing a change in the dollar price of gold. He reiterated what he had said on many occasions that he does not perceive any considerations which would justify such an action.

(a) The gold content of the dollar

Only an act of Congress can now alter the statutory gold content of the dollar. The gold content of the dollar, and hence the statutory monetary value of gold in terms of the United States dollar, was defined by the Presidential Proclamation of January 31, 1934, issued under authority of title III, section 43, of the act approved May 12, 1933, as amended. The weight of the gold dollar was fixed by this Proclamation at 15½1 grains of gold 9/10ths fine, that is, 1/35 of a troy ounce of pure gold (technically referred to as gold 1,000 parts fine). The monetary or statutory value of gold in the United States is therefore \$35 per fine troy ounce. After several extensions the authority of the President by proclamation further to change the gold content of the dollar expired on June 30, 1943.

(b) The price of gold

The Secretary of the Treasury has authority under sections 8 and 9 of the Gold Reserve Act of 1934, as amended, with the approval of the President, to purchase and sell gold at such rates and upon such terms and conditions as he may deem most advantageous to the public interest.

The authority of the Secretary of the Treasury in this respect, however, is limited by a number of factors. First is the obligation undertaken by the United States as a member of the International Monetary Fund. Article IV, section 2 of the Articles of Agreement of the International Monetary Fund provides:

"The Fund shall prescribe a margin above and below par value for transactions in gold by members, and no member shall buy gold at a price above par value plus the prescribed margin or sell gold at a price below par value minus the prescribed margin."

The Fund has prescribed a margin of ¼ of 1% above and below the par value for purchases and sales of gold. Accordingly, the United States has an obligation to the International Monetary Fund not to purchase gold at more or sell gold at less than \$35 plus or minus the prescribed margin so long as the par value of the dollar declared to the Fund remains unchanged. The par value of the dollar can be changed only pursuant to the provisions of the Articles of Agreement and the Bretton Woods Agreements Act, which requires the approval of Congress for any such change. Section 5 of that act provides that neither the President nor any person or agency shall propose to the International Monetary Fund any change in the par value of the United States dollar or approve any general change in par values unless Congress by law authorizes such action.

Even without the legal obligation to the International Monetary Fund there are important considerations of policy which, in effect, circumscribe the discretion of the Secretary of the Treasury to change the price of gold. The gold policy of the United States has been directed primarily to maintaining a stable relation between gold and the dollar.

Since 1934 the United States has firmly adhered to the requirements of an international gold bullion standard. We have done so by buying and selling gold freely at a fixed price, \$35 an ounce, in transactions with foreign governments and

central banks for all legitimate monetary purposes.

The importance which the United States attributes to the maintenance of a stable dollar price for gold is demonstrated by other legislative provisions. The gold parity statutes contained in the Gold Standard Act of 1900 and the act of May 12, 1933, provide that the gold dollar "shall be the standard unit of value and all forms of money issued or coined by the United States shall be maintained at a parity with this standard and it shall be the duty of the Secretary of the Treasury to maintain such parity."

[Omitted from this exhibit is part of appendix A, which includes sections of the Bretton Woods Agreements Act and of the Foreign Assistance Act of 1948 relating to the National Advisory Council, which sections were printed in the Annual Reports of the Secretary of the Treasury for 1945 and 1948, respectively. Omitted also are appendixes B, C, and E, which include tables on estimated gold and short-term dollar resources of foreign countries as of June 30, 1949, gold transactions between the United States and foreign countries, January 1, 1945, through September 30, 1949, United States Government assistance to foreign countries, July 1, 1945, through June 30, 1949, and membership and quotas in the International Monetary Fund and membership and subscriptions in the International Bank for Reconstruction and Development, September 30, 1949. Corresponding tables containing data through December 31, 1949, and membership information as of March 31, 1950, are published in the appendixes of the National Advisory Council report covering operations from October 1, 1949, through March 31, 1950, which is printed as exhibit 29. The appendixes in exhibit 29 are published in full except the sections of the legislation referred to above.]

Exhibit 28.—Second Special Report of the National Advisory Council on the operations and policies of the International Monetary Fund and the International Bank for Reconstruction and Development covering the two-year period ended March 31, 1950

[House Document No. 611, 81st Congress, 2d session]

LETTER OF TRANSMITTAL

To the Congress of the United States:

In accordance with section 4 (b) (6) of the Bretton Woods Agreements Act, there is transmitted herewith the Second Special Report on the operations and policies of the International Monetary Fund and the International Bank for Reconstruction and Development.

HARRY S. TRUMAN.

THE WHITE HOUSE, May 31, 1950.

LETTER OF SUBMITTAL

THE SECRETARY OF THE TREASURY, Washington, May 12, 1950.

The PRESIDENT,

The White House.

My Dear Mr. President: Section 4 (b) (6) of the Bretton Woods Agreements Act directs the National Advisory Council to submit every 2 years a special report on the operations and policies of the International Monetary Fund and the International Bank for Reconstruction and Development. The first such report was submitted in May 1948. As in the case of the First Special Report, the present report discusses the specific questions raised by this provision of the law, particularly the extent to which the Fund and Bank have achieved the purposes for which they were established and the degree to which these institutions have served the interests of the United States and the world in promoting sound international economic cooperation and furthering world security.

In accordance with section 4 (b) (5) of the Bretton Woods Agreements Act, the Council will submit a separate report, along the lines of previous 6 months' reports, on the activities of the Fund and Bank

during the period October 1, 1949, to March 31, 1950.

Faithfully yours,

JOHN W. SNYDER, Chairman, National Advisory Council on International Monetary and Financial Problems. SECOND SPECIAL REPORT OF THE NATIONAL ADVISORY COUNCIL ON THE OPERATIONS AND POLICIES OF THE INTERNATIONAL MONETARY FUND AND THE INTERNA-TIONAL BANK FOR RECONSTRUCTION AND DEVELOP-THE TWO-YEAR PERIOD ENDED MENT COVERING MARCH 31, 1950

CHAPTER I. INTRODUCTION

The National Advisory Council is directed by section 4 (b) (6) of the Bretton Woods Agreements Act biennially to submit a special report to the President and the Congress on the operations and policies of the International Monetary Fund and the International Bank for Reconstruction and Development. These reports are to cover "the extent to which the Fund and the Bank have achieved the purposes for which they were established; the extent to which the operations and policies of the Fund and the Bank have adhered to, or departed from, the general policy directives formulated by the Council, and the Council's recommendations in connection therewith; the extent to which the operations and policies of the Fund and the Bank have been coordinated, and the Council's recommendations in connection therewith; recommendations on whether the resources of the Fund and the Bank should be increased or decreased; recommendations as to how the Fund and the Bank may be made more effective; recommendations on any other necessary or desirable changes in the Articles of Agreement of the Fund and of the Bank or in this act; and an over-all appraisal of the extent to which the operations and policies of the Fund and the Bank have served, and in the future may be expected to serve, the interests of the United States and the world in promoting sound international economic cooperation and furthering world security."1

In the period intervening since the submission of its First Special Report, the Council has submitted to the President and to the Congress, in accordance with section 4 (b) (5) of the act, four semiannual reports on its activities. In each of these reports there has been included a discussion of the principal matters of interest in relation to the Fund and the Bank. These matters will not be covered again, except insofar as they are directly related to the broader questions of

policy discussed in the present report.²

In its First Special Report the Council noted the extensive economic difficulties of the world consequent upon the war. At that time the economies of many countries, particularly in Europe, were suffering from shortages of raw materials and fuels, attrition of capital equipment, and disorganization of production and of trade both within countries and among countries. The report noted various ways in which the world had been attempting to cope with the problems of production, trade, and employment, and also summarized very briefly the United States contributions to the process of reconstruction. First Special Report was presented after the Congress had passed the

¹ Public Law 142, 81st Cong., which amended portions of the National Bank Act and the Bretton Woods Agreements Act, as amended, requires this report to include additional matters regarding the International Bank. These questions are treated on page 329.

² This report covers the 2-year period ending March 31, 1950.

enabling legislation for the European Recovery Program, but before

appropriations for the Program had been made.

Partly as the result of reconstruction programs sponsored by the United States, the economic situation of the world at the present time appears far more satisfactory than when the previous report was submitted. In Europe particularly great strides have been made in the recovery of production. With the recovery of production there has also been a recovery in world trade, though the recovery of trade has probably not reached the point of expansion that had been expected

by the Bretton Woods Conference.

The Articles of Agreement of the International Monetary Fund were predicated on the expectation that within a period of a few years following the end of hostilities, world trade would be restored to a multilateral basis, with the elimination by the member countries of restrictions on international payments for current account. It was expected that the currencies of the world would again become convertible for international transactions on current account. These expectations have not been realized. On the contrary, a large and persistent disequilibrium in the dollar accounts of most countries in the world required them to draw heavily on their gold and dollar reserves. not only gave rise to the need for special aid, such as the ERP, but greatly retarded the rate of progress which countries found it possible to make in eliminating exchange and trade restrictions and restoring effective currency convertibility. Consequently, the Fund and the Bank have continued to operate in a world of restrictions and thus have been unable fully to realize their objectives and to carry out their activities in the way that was contemplated. In brief, the transitional period contemplated by the Articles of Agreement has continued to the present time and may be prolonged until a substantial part of the members of the Fund can undertake the obligations of article VIII This situation has been reflected in the poliof the Fund Agreement. cies and activities of these institutions.

It was recognized by the Bretton Woods Conference that the elimination of exchange restrictions of itself would prove inadequate to the attainment of the Fund's purposes of expanding world trade and nondiscriminatory currency practices unless barriers to trade in the form of quantitative restrictions, import and export controls, and similar devices, which easily could negate freedom of exchange transactions, also were drastically reduced. The Conference in its Resolution VII inter alia called upon the nations to deal internationally with the problem of reducing trade regulations and restrictions and other nonfinancial barriers to world trade, and section 14 of the Bretton Woods Agreements Act declared that it was the policy of the United States to bring about further international economic cooperation to

attain these ends.

After a succession of conferences a Charter for the International Trade Organization has been formulated and submitted to the Congress and the legislatures of other nations. The code of international trade practices embodied in the ITO Charter will form a valuable adjunct to the provisions of the Fund Articles regarding international currency and exchange practices. Under the proposed ITO Charter the Fund is given certain responsibilities with regard to balance-of-payments questions arising under the Charter. Special exchange

agreements with the ITO are to be required in the case of countries not members of the Fund so that they assume obligations in exchange matters comparable to those of Fund members. The ITO Charter provides for consultation and cooperation between the ITO and the Fund in other matters of common interest. The combined activities of these organizations should eventually bring closer to realization their common ideal of expanding multilateral trade intended to raise levels of production and real income throughout the world and should contribute to the stability of the flow of income among the nations.

Pending the entry into effect of the ITO Charter, 26 countries have entered into a General Agreement on Tariffs and Trade, and additional countries are in process of adhering to this Agreement. The countries making this General Agreement have agreed to certain international trade practices as immediate steps looking forward to the entry into force of the more permanent provisions of the ITO Charter and have agreed upon mutual reductions in tariffs and elimination of certain quantitative restrictions on the movement of international trade. There are also provisions for consultation with the Fund in trade matters related to the balance of payments of the signatories and for special exchange agreements with countries not in the Fund.

Table I.—Member countries of the International Monetary Fund and the International Bank for Reconstruction and Development, as of Mar. 31, 1950

Australia El Salvador Nicaragua Ethiopia Norway Austria Belgium Finland Panama Bolivia France Paraguay Peru Brazil Greece Canada Guatemala Philippines Chile Honduras . Syria Thailand China Iceland Turkey Colombia India Union of South Africa Costa Rica Iran United Kingdom Cuba Iraq Czechoslovakia Italy United States Denmark Lebanon Uruguay Dominican Republic Luxembourg Venezuela Ecuador Mexico Yugoslavia Netherlands Egypt

In the last 2 years two additional members have joined the International Bank and the International Monetary Fund, and one, Poland, has withdrawn, so that they have a present membership of 47 countries. Of the original signatories only Haiti, Liberia, New Zealand, and the Soviet Union have not become members, while Austria, Finland, Italy, Pakistan, Thailand, and Turkey, which did not participate in the Bretton Woods Conference, have been admitted to membership.³

Chapter II. The International Bank for Reconstruction and Development

The International Bank was established to make and guarantee loans for postwar economic reconstruction and the economic development of its member nations as a means of realizing the more general

³ Haiti, Liberia, and Pakistan have been admitted to membership but have not as yet assumed the obligations of members by signing the Articles of Agreement and paying their subscriptions.

objectives of international economic cooperation, the growth of international trade, the maintenance of equilibrium in the balances of payments of members, and raising the standards of living of the member countries.

1. CAPITALIZATION AND FINANCING OF THE BANK'S OPERATIONS

The Articles of Agreement of the Bank authorize a capital of 10 billion dollars. The original signatories were to subscribe 9.1 billion dollars of this amount, with the balance available for such new members as might eventually be admitted. The present subscribed capital of the Bank is \$8,348,500,000. The capital of the Bank consists of three portions: (1) 2 percent of each member's subscription paid in gold or dollars, except that those countries formerly occupied by the enemy may defer part of their payment; (2) 18 percent of the capital paid in the member's own currency; and (3) 80 percent of the capital subject to call only to meet obligations of the Bank and payable in the currency required by the Bank to meet its obligations. On the 2 percent payment, the total received has been \$162,055,000 and \$4,915,000 has been deferred. Of the total paid in capital, equivalent to \$1,664,785,000, the United States has paid in \$635,000,000. Gold and dollar payments by other countries have provided the Bank with \$98,555,000 which can be used without restriction for lending operations. The 18 percent payment may be used only with the consent of the member country.

The United States Government, acting through the National Advisory Council, has given its consent to the use of the subscription of the United States. The Governments of Belgium, Canada, Denmark, and the United Kingdom have also authorized the use of part of their capital subscription for lending purposes in amounts aggregating the equivalent of about \$13,300,000. While the Bank has been anxious to secure permission from the member governments to use their capital subscriptions for lending purposes, governments other than those specified have not as yet seen fit to grant such permission.

In accordance with section 7 (c) of the Bretton Woods Agreements Act and article V, section 12, of the Bank Agreement, the United States substituted noninterest-bearing notes for that part of the United States subscription not currently needed in the Bank's operations. In consequence of the Bank's use of the United States subscription for making loans, the entire amount of the United States subscription has now been converted into cash so that no notes of this issue are outstanding at this time.

The Bank may make direct loans from the portion of the capital subscribed and paid in by the members, or from borrowed funds. The Bank has issued securities on the market in the United States and in Switzerland, a nonmember country. As noted in previous reports of the Council, the United States has given the Bank permission, in accordance with the Articles, to float securities in the United States market. On July 15, 1947, the Bank issued \$100,000,000 par value of 10-year 2½ percent bonds due July 15, 1957, and \$150,000,000 of 25-year 3 percent bonds due July 15, 1972. On January 25, 1950, the Bank, after permission had been granted by the Council, sold an issue

⁴ In addition to this amount the United Kingdom has agreed, in principle, to the release of an equivalent of \$2,800,000, subject to specific approval in individual cases as they arise.

of \$100,000,000 of 2 percent serial bonds which will mature at an annual rate of \$10,000,000 between 1953 and 1962. These bonds were issued to retire the outstanding 10-year 2½ percent bonds. While the first issues of the Bank's securities were sold directly to investors, the 1950 issue was sold by competitive bidding to a syndicate of banking houses, including commercial banks. Since the coupon rate was reduced by ½ percent and the new bonds were sold to the syndicate at a premium of \$559,000, the cost of money to the Bank has been reduced more than \$1,250,000 annually. At the same time the maturities of the bond issues will correspond more closely to the serial repayments of loans to the Bank.

The Bank has also issued two series of bonds denominated in Swiss francs. In 1948 the Bank sold an issue of 2½ percent bonds in the amount of 17,000,000 Swiss francs (equivalent to approximately \$4,000,000) to the Bank for International Settlements, and in 1950 an issue of bonds with the same coupon rate in the aggregate amount of 28,500,000 Swiss francs (approximately \$6,600,000), was sold to a group of Swiss banks. Both of these issues were purchased by the banking institutions for investment purposes and were not offered to the public. The bond issues were floated to obtain Swiss francs to enable the Bank to provide funds for certain purchases of Swiss materials and equipment and to extend the market for the Bank's

securities.

The loans made by the Bank up to the present time have been derived from the capital subscription of the United States and, to a very small extent, from the capital funds provided by other countries. The total loans made by the Bank to March 31, 1950, less cancellations, have amounted to \$737,700,000, of which \$595,000,000 has been disbursed, while the amount available from members' subscriptions for loan purposes has aggregated \$746,900,000. The bulk of the funds obtained by the sale of securities has not as yet been loaned, and the Bank has invested the proceeds along with other surplus cash in States Government obligations to a total amount of \$433,600,000, as of March 31, 1950. These investment securities have earned over \$4,000,000 per annum for the Bank. The accumulated interest from these investments and other earnings of the Bank are available for additional loans by the Bank, since the Board of Governors at the annual meetings has voted not to distribute the Bank's current earnings, thus providing additional security for Bank obligations.

The Articles of Agreement of the Bank also authorize the Bank to guarantee loans made through private investment channels, as well as to guarantee securities in which it has invested, in order to facilitate resale to private investors. The original expectation that a considerable part of the Bank's business would take the form of guaranties of privately floated loans has not been realized in practice, under the conditions prevailing in the world. In two instances, however, the Bank has resold to private investors with its guaranty securities received under its loan agreements. In 1948 the Bank made a series of loans to four Netherlands steamship companies in an aggregate amount of \$12,000,000. The securities arising from these loans were subsequently sold to a group of American commercial and savings banks. Similarly, the bonds arising from a loan of \$16,000,000 made

directly to the Kingdom of Belgium were resold at private sale to a group of New York savings banks and a life insurance company. The National Advisory Council, on behalf of the United States Government, approved of these sales of securities in the markets of the United States.

Section 15 (b) of the Bretton Woods Agreements Act, as amended by Public Law 142, Eighty-first Congress, requires that the biennial special reports of the Council shall cover the effectiveness of the provisions of section 15 (a) of the act and the exemption for securities issued by the Bank, provided for by section 8 of the National Bank Act, in facilitating the operations of the Bank, and the recommendations of the Council as to any modifications it may deem desirable in

the provisions of the act.

Section 15 (a) of the amended act exempted the securities of the Bank from certain provisions of the Securities Act of 1933 and the Securities Exchange Act of 1934 on condition of filing reports with the Securities and Exchange Commission. This amendment was supported by the Council in order to facilitate the wider distribution in the United States of securities issued or guaranteed by the International Bank. Since enactment of the amendment in June 1949, the Bank has distributed only one issue of its securities, the \$100,000,000 of bonds maturing serially from 1953 to 1962 mentioned above, which was sold in January 1950 at competitive bidding to a syndicate consisting of 99 investment bankers and 37 commercial banks. The participation of the commercial banks was made possible by the amendment to the National Bank Act.

In view of the short time that has elapsed and the fact that there has been only one issue of the Bank's bonds since the adoption of the amendment, the Council does not believe it possible as yet to judge the effectiveness of section 15 (a) in securing a wider distribution of the Bank's securities and, accordingly, does not at this time recom-

mend any change.

2. THE BANK'S LOANS

As of March 31, 1950, the Bank had made loan commitments (less cancellations) of \$737,700,000 including a loan of \$12,500,000 which, however, has not as yet become effective. The Bank retained in its portfolio \$697,100,000 in securities arising from these loan transactions.

During the first 2 years of its operations the Bank's loans were predominantly reconstruction loans made to the governments of European countries, or their agencies, i. e., France, the Netherlands, Denmark, and Luxembourg. In the case of France, the Netherlands, and Denmark, the loans made in 1947 were general purpose reconstruction loans which assisted these countries in carrying on their reconstruction programs, and enabled them to secure needed supplies of materials and equipment in the United States. The loan to Luxembourg (1947) was to finance construction work for a steel mill and to provide rolling stock for railways. The Council, through the United States Executive Director, favored these loans, which made a valuable contribution to European recovery. It became clear, however, that the magnitude of the European recovery problem was far greater than had originally been anticipated and that the needed program could not be financed entirely or predominantly on a

loan basis under the conditions set in the Bank's Articles of Agreement. For this reason, among others, the Council favored the European recovery proposals which were submitted to the Congress and enacted into law in 1948. The International Bank loans proved of great value in that they financed some of the most pressing reconstruction needs

in the earlier period.

Since the beginning of the operations of the Economic Cooperation Administration program of grants and loans, the International Bank has made only a few special purpose loans to European countries. These were loans to the Netherlands steamship companies for the purchase of ships, and to Belgium for steel mills and power plants. The Bank has also made loans to the Republic of Finland and the Bank of Finland (guaranteed by the Republic) for timber equipment, the modernization of the woodworking industry, electric power, and limestone production. In 1949 it also made a loan to Yugoslavia for timber equipment. The loans to Finland and Yugoslavia are part of a project for relatively short-period financing of the purchase of timber equipment which would enable these countries to produce and export to western Europe timber needed in the process of European economic reconstruction. These loans should be of benefit to both the borrowing countries and the countries cooperating in the European Recovery Program.

In the last 2 years the Bank has directed its major attention to development loans, particularly in Latin America. Thus, loans were made to Chile for hydroelectric and irrigation installations and the procurement of agricultural machinery. The loan to the Brazilian Traction, Light & Power Co., Ltd., guaranteed by Brazil, was for power and telephone installations, and the loan to Mexico was for power plants and power distribution. The Bank has also approved a loan to El Salvador for a hydroelectric plant and power-distribution equipment, though this loan has not as yet become effective. The loan to Colombia was for agricultural machinery. The Bank has also made a loan to India for railway rehabilitation and land-reclamation machinery, which will contribute to the badly needed agricultural development of the country. These loans mark an important step in the development of the Bank's lending policy. They were made to underdeveloped countries for carefully planned projects intended to increase their economic productivity over a period of time. Council, in concurring in the granting of these loans, has looked with favor on the extension of the Bank's activities to the underdeveloped countries in the belief that the raising of the productivity of their economies will contribute to world economic prosperity and stability.

In addition to the loans which have been made, the Bank has a variety of applications before it from other countries for various projects. As a general practice, the Bank considers that it is desirable in the interest both of the borrower and of the Bank to have proposed projects carefully examined on the spot by groups of technicians designated by the Bank. These studies have frequently resulted in a reformulation of the project so that some of the projects have been improved or their cost reduced. Many members without specific loan projects in view have asked the Bank for technical assistance in the survey and study of their economies and their prospects for

development.

Table II.—Status of International Bank loans, as of Mar. 31, 1950

Borrower	Loan com- mitments	Disburse- ments	Unused balance of commitments

Note.-In all instances, loans have been made to or guaranteed by the respective governments.

Source: International Bank for Reconstruction and Development.

The National Advisory Council is of the opinion that the Bank has contributed to the economic development of underdeveloped countries both through its loans and through its technical advice and assistance. The Council believes that the Bank should play an increasingly important role in this pattern of development and that it can be especially valuable in assisting the member countries to direct their economic development in ways which will effectively contribute to raising standards of living and improving levels of Properly conceived development projects will also, by increasing productivity, help these countries in financing their foreign exchange needs.

The President of the United States has emphasized the importance of technical assistance to the underdeveloped countries in the Point IV Program, which is under consideration by the Congress. Bank's activities in this field are a valuable contribution to economic development, fully consonant with the United States international program. The Bank, by using technicians from various countries, can give programs of technical assistance the benefit of wider experience than would be available from the United States alone. In this connection it is significant that the Bank has entered into cooperative arrangements with the International Monetary Fund and with the United Nations for the provision of technical advice to member countries and for undertaking technical studies directed toward economic development. It is expected that the Technical Assistance Program will help to overcome some of the barriers to sound development loans to underdeveloped countries, and will provide considerable assistance to countries in the presentation of projects which will meet the loan criteria of the Bank. In this way it is hoped that the Point IV Program will make possible a more rapid rate of expansion of loans by the International Bank.

Nacional Financiera and Comision Federal de Electricidad are joint horrowers.
 After cancellation of \$6,200,000, effective Mar. 17, 1950.
 Agreement becomes effective after the Bank has received certain certificates and documents, and has notified the horrower and guarantor of its acceptance of such evidence.
 After cancellation of \$238.017, effective Dec. 19, 1949.

3. BANK ADMINISTRATIVE MATTERS

The organization of the Bank was provided for in the Articles of Agreement. Its Board of Governors meets annually and the conduct of affairs between meetings of the Governors is in the hands of the Executive Directors, to whom the Governors have delegated all of their powers except those which have been reserved exclusively to the Governors by the Articles of Agreement. The five countries with the largest subscriptions have the privilege of naming Executive Directors to represent them, while the remainder of the Board is elected by the countries with smaller subscriptions. Thus, the elected Directors represent several countries, with the number varying from 2 to 10. Each Director in turn appoints an Alternate Executive Director who need not be a national of the same country as the Executive Director. In some instances the Executive Director and his Alternate have been nationals of different countries thus giving greater representation to the group of members electing the Director.

The Bank's Articles provide that the Executive Directors shall "function in continuous session at the principal office of the Bank and shall meet as often as the business of the Bank may require" (art. V, sec. The experience of the 4-year period has indicated that the business of the Bank is not such as to require frequent sessions of the The active negotiation of loans or the study of Executive Directors. loan projects is carried out by the staff of the Bank, under the President's direction, so that the main function of the Executive Board is to give general guidance to the President and to determine the terms of loans after a considerable period of study and negotiation. business can be transacted by a Board meeting at less frequent intervals than the Fund Board whose problems and methods of operation are rather different. Some of the member countries accordingly have felt that it was undesirable to keep both an Executive Director and an Alternate on a full-time basis in Washington. Other countries have believed, however, that their interests in the Bank could be best served by the retention of full-time Executive Directors and Alternates.

At the annual meeting of the Board of Governors in 1948, a Committee of Governors was established to study this question and to submit its findings to the 1949 meeting. After discussion at the 1949 meeting, the Committee was enlarged in membership and directed to submit a second report to the Governors. This Ad Hoc Committee in the early part of 1950 reported a plan whereby either the Executive Director, or the Alternate, but ordinarily not both, representing a country or group of countries, would be continuously available at the seat of the Bank. They would ordinarily be paid on the basis of the portion of their time actually devoted to the Bank, and might perform other functions for their countries. Where, however, special circumstances existed, an Executive Director might arrange with the Bank's president for simultaneous full or part-time service of both himself and his Alternate. In this way there would be the maximum of flexibility in the arrangements of the various members. revision of the bylaws of the Bank, approved by the vote of the Governors on March 30, 1950, this system will go into effect at the meeting of the Governors in September 1950.

In line with the objective of the new bylaws, the United States

Government has appointed as its Executive Director of the Bank an Assistant Secretary of the Treasury, who receives no compensation from the Bank, but carries on the duties of Executive Director in addition to his normal duties in the United States Government. He is assisted by an Alternate Executive Director who divides his time between the Fund and the Bank. Somewhat similar arrangements have been made by a number of other countries, which have designated part-time Directors or Alternates.

The Bank's Articles provide for an Advisory Council of seven or more persons elected for a 2-year term by the Board of Governors. This Advisory Council has included representatives of banking, commercial, industrial, labor, and agricultural interests, as distinct from ordinary national interests as represented in the Board of Executive The members have been designated after consultation with the international organizations in these fields. The Advisory Council selected in 1948 held sessions in 1948 and 1949, at which it discussed various problems in connection with the Bank's operations but found that it was unable to agree upon any recommendations and, in fact, at its last session made no formal report to the Bank. It was the opinion of the Chairman of the Bank's Advisory Council, as well as a majority of the members that, as presently constituted, the Bank's Advisory Council served little useful purpose. Accordingly, at the 1949 meeting of the Board of Governors, a new set of councilors was not elected, and the Executive Directors have been instructed to study methods whereby the intention of the Articles could be more satisfactorily accomplished by a reconstitution of the Council through a different selection of members, or otherwise. The National Advisory Council concurs substantially in the conclusion that the Bank's Advisory Council in its present organization and with its present terms of reference has not made a valuable contribution to the work of the Bank.

4. FISCAL RESULTS

The International Bank was established as a cooperative venture in financing reconstruction and development. As such, it was not a primary objective that the Bank should earn a large profit but merely that its operations should be conducted with a prudent regard to the interests of all of the member nations, the soundness of its loans, and the safety of the securities sold by it to the public. During the first period of its operations, before interest on loans accrued to the Bank in large amount, the Bank operated at a loss, amounting in the fiscal year ending June 30, 1947, to \$938,600. Since that period, however, the Bank's income has increased, so that in the fiscal year ending June 30, 1948, there was an excess of income over expenses of \$4,100,000; in the fiscal year 1949 of \$10,600,000; and in the 9-month period ending March 31, 1950, \$9,900,000. Thus, though it was not intended as a profit-making institution, the Bank has been able to add to its surplus which, on March 31, 1950, stood at \$23,500,000. In addition, the special reserve held against the Bank's liabilities amounted to \$12,200,000. For the 9 months ending March 31, 1950, the lending operations of the Bank (interest, commissions, commitment, and other incidental charges) produced gross revenue of \$19,200,000. Of this amount \$4,200,000, equal to the commissions, was added, in accordance with the Articles, to the special reserve against the Bank's liabilities. The funds derived from the sale of its securities and other funds not immediately needed in the Bank's operations, as well as the special reserve fund, have been invested in United States securities which, in the 9-month period, yielded an income to the Bank of \$3,800,000. Expenses for this period aggre-

gated \$8,900,000.

At their annual meetings, the Board of Governors has voted not to distribute the net income of the Bank but to add this income to the Bank's operating funds. If a dividend were to be declared, the Bank's Articles of Agreement provide for a preferred dividend of up to 2 percent of the amount of a member's subscription used in loans. Since the bulk of the loans has been made in United States dollars, the bulk of any dividend would thus accrue to the United States Government. In the opinion of the National Advisory Council it has been preferable to keep the Bank's earnings available to the Bank to add to its available capital and surplus as an additional guaranty of the Bank's obligations which have been issued on the market, and to provide additional funds against the contingency of possible default.

5. CONCLUSIONS AND RECOMMENDATIONS

The National Advisory Council believes that the Bank has made considerable progress in carrying out the functions entrusted to it by the Articles of Agreement. The loans made by the Bank in the initial period of postwar reconstruction have been of value in assisting the recovery of the European countries. From the vantage of the present time, it is apparent that the total requirements of the European countries for goods needed to restore their economies to approximately prewar levels have involved funds far in excess of the amount which could be supplied by the Bank under the terms of its Articles and the conditions of financial markets. The foreign economic assistance programs of the United States since 1945 have amounted to several times the total authorized capital of the International Bank. Moreover, it is also clear that it would have been practically impossible to finance the European Recovery Program on a loan basis without greatly impairing the future balance-of-payments position of the participating countries and creating international financial difficulties in future years, in view of the problem of prospective world balances of payments. The Bank, however, may be expected in the future to make loans to European governments or to enterprises whose loans will be guaranteed by governments.

The Bank is making an increasing contribution to the economic

development of underdeveloped member countries. It has made loans for hydroelectric and other power projects which should increase the productive capacity of the borrowing countries. It has made loans for agricultural development programs which should add to the ability of the borrowing countries to feed their populations and to provide commodities for export. The Bank has also, through its missions and technical advice, rendered an important, though perhaps less tangible, service to the member countries. The Council

heartily supports these activities of the Bank.

The Articles of Agreement predicate that the Bank would be able

to finance loan programs principally by the sale of its securities in the financial markets of the member countries. Under the conditions of currency inconvertibility and the maintenance of exchange and other controls, particularly on capital transactions, which have prevailed up to the present, the Bank could, in practice, raise capital funds in large amount only in the American financial market. The Bank has obtained a small amount of Swiss franc funds and it has been authorized to use a very small percentage of the capital subscription of countries other than the United States. It does not appear that for the immediate future the Bank will be able to obtain nondollar funds in an amount large enough to add greatly to its lending capacity.

The Council believes that the methods of consultation with the United States representatives on the Bank and other agencies engaged in international financial transactions have provided satisfactory coordination in the light of the broad objectives of United States international policy. In its opinion the operations of the Bank have contributed to promoting international economic cooperation and furthering world security. The Council does not believe that the United States subscription to the capital stock of the Bank should be changed at this time, nor does it wish to propose amendments to the Bank's Articles of Agreement. The improvement of world conditions will, it is hoped, give the Bank a more important role in furthering international investment as an aid to world security and to improvement in the standards of living of the member nations.

CHAPTER III. THE INTERNATIONAL MONETARY FUND

The International Monetary Fund is an organization intended to promote international monetary cooperation and to assist in the expansion of productive world trade by promoting exchange stability and maintaining orderly exchange arrangements. In carrying out its functions it may aid members by selling foreign exchange to them, under adequate safeguards, to assist them in correcting temporary maladjustments in their balances of payments without resorting to measures destructive of national or international prosperity.

The Articles of Agreement of the International Monetary Fund were predicated on the expectation that after a relatively brief period of transition extending over a few years after the war, the world would make rapid strides toward multilateralism in exchange and trade. Recognizing that changes would come about in stages and that various types of adjustment would be needed in the light of the diversity of conditions among the member nations, the Fund was established as an international arbiter of exchange practices and as an instrument for discussion and mutual cooperation among the members. actual postwar conditions have been far removed from the ideal situation for the Fund, and, as a consequence, its policies and operations have necessarily reflected the unstable and restrictive conditions of the postwar world. Some countries have found it possible to remove some or even most of the exchange restrictions imposed during the war. But all except five countries have availed themselves of the right to retain exchange restrictions, and a number of countries have intensified restrictions. It cannot so far be said that the total

907795-51---23

movement has been large in the general direction of unrestricted

convertibility of currencies.

Under these conditions most of the world currencies have been inconvertible. The Fund, as a pool of currencies and gold, has thus included a predominance of inconvertible currencies which have not been in great demand by the member countries. The Fund's transactions, therefore, have been very largely in United States dollars. Moreover, so far the amount repurchased from the Fund has been relatively small. It must be kept in mind that the type of currency transaction originally envisaged by the Fund's Articles would result from temporary deficits in balances of payments under conditions in which exchange markets are dominated by private exchange transactions. In practice, with the extensive systems of exchange control, import licensing, governmental purchasing programs, and other forms of direct governmental intervention in international trade, situations arise in which balance-of-payments deficits result from governmental planning.

The Fund was not intended to provide long-term loans, nor to provide funds for reconstruction. It was intended to aid in the stabilization of exchange rates by providing temporary assistance to the members. Under conditions of inconvertibility the drawing of currency, with little prospect of repurchase within a relatively short time, is practically equivalent to an unsecured loan with no very precise conditions for repayment. Under these conditions, the Fund has found it peculiarly difficult both to formulate and to administer a

proper and reasonable policy to govern the use of its resources.

It is understandable that, in any description or evaluation of the

activities of the Fund, emphasis should be placed on the manner and extent of the use of its resources. But the Fund also has the task of interpreting to members the "code of fair practice" in the field of foreign exchange policy which is set forth in its Articles of Agreement, and of serving as impartial and expert adviser to members who are striving to take the measures most likely to contribute to stability

and equilibrium.

The National Advisory Council has had these problems and changing circumstances in mind in the formulation of United States policy with respect to the Fund. It has tried to avoid the extreme, on the one hand, of acquiescing in the virtually automatic use of the Fund's resources to meet any type of current deficit, while also, on the other hand, avoiding the extreme of insisting upon such rigid standards as would practically have suspended the Fund's currency operations until greater progress had been made toward general convertibility, particularly of sterling, and toward elimination of exchange restric-Thus, in the first period of the Fund's operations the Council concurred in some Fund drawings, principally by European countries, in the hope that financial stability might be more rapidly attained thereby. As it became apparent that Fund drawings would merely be one additional source of dollars in a situation of fundamental disequilibrium which would not be remedied within a few years, the Council has favored a policy of conservation of the Fund's resources to the future date at which their use might be more efficacious in bringing about the realization of the Fund's basic objectives as stated in the Articles of Agreement.

EXHIBITS . 337

As an element in this policy, the Council has urged measures which would result in the repurchase of their currencies by members drawing on the Fund so as more effectively to maintain the revolving character of the Fund's pool of currencies. The Council has also emphasized the importance of appropriate levels of exchange rates and exchange policies as an important means eventually of achieving the Fund's objectives through the reduction of fundamental disequilibrium in the international accounts of the members and the avoidance of restrictions which hamper international trade. The specific questions of policy with regard to the Fund are outlined in the following paragraphs.

1. PAR VALUES AND EXCHANGE STABILITY

One of the primary objectives of the Fund is "to promote exchange stability, to maintain orderly exchange arrangements among members, and to avoid competitive exchange depreciation." Exchange stability implies that the prices at which foreign exchange is bought and sold do not deviate greatly from the par values established with the Fund. Par values, expressed in terms of gold or dollars of the weight and fineness in effect July 1, 1944, have been established for all members of the Fund except Austria, China, Finland, Greece, Italy, Thailand, and Uruguay. In the case of France a par value was established in 1946, but there has been no agreed par value since January 26, 1948, and Peru temporarily abandoned its par value in November 1949.

In accepting the original par values in 1946 the Fund recognized that some of the rates adopted would need modification at a later date since they were out of line with relative wage and price levels. The Fund believed that when production had increased and postwar trade had returned to more normal conditions, satisfactory adjustments might be made. The National Advisory Council gave careful consideration to the problem of exchange rates at the time of the determination of the original parities, and concurred in this general

conclusion.

The Council has had the problem of exchange rates under continuous review. In 1948, while the legislation for the European Recovery Program was under consideration in the Congress, the Secretary of the Treasury, on behalf of the Council stated:

The adjustment of some exchange rates may be expected in the course of European recovery. Inflation in Europe in certain instances has given rise to exchange rates which result in an overvaluation of the currencies in relation to the dollar. This state of affairs has tended to hinder the exports of such countries and at the same time to make imports relatively cheap in terms of local currency. In some cases countries have resorted to export subsidies, by means of special exchange rates, or have used other measures in conflict with our own long-range

international economic program.

The determination of an appropriate exchange rate is a very complex matter involving the widest range of considerations relating to prices, costs, and balances of payments. The difficulties of setting exchange rates under present conditions are such that, although the rates of some of the participating countries will certainly have to be adjusted, the time of these adjustments will vary from country to country. Accordingly, it would not be good policy for us to insist upon across-the-board modification of exchange rates before we extend aid. The revision of rates of individual countries should instead be considered as a part of a developing program of internal and external stabilization in conjunction with United States assistance. To insure that these revisions will be undertaken where necessary, the recipient countries will be asked to agree that when, in

the opinion of the United States Government, their exchange rates are imposing an unjustifiable burden on their balances of payments, they will consult with the International Monetary Fund about revision.5

A year later the Secretary, in discussing the legislation for the continuation of the European Recovery Program, stated:

The National Advisory Council has studied this question from time to time over the last year, and we did not conclude that the time was ripe for widespread exchange rate adjustments. This does not mean that we will hold to the same The Council believes that the exchange rate question views in 1949 . . should be reviewed with a number of the European countries in the course of the next year. The objective will be to explore with these countries the extent to which they can improve their balance-of-payments position with the Western Hemisphere, and whether or not changing the par values of their currencies will be conducive to this result. Where an exchange rate adjustment is be conducive to this result . . . Where an exchange rate adjustment is indicated, a member country will be expected to propose a new par value to the International Monetary Fund.⁶

The International Monetary Fund in its report for the year 1948-49 discussed at some length the problems affecting the balances of payments of the member countries. It emphasized the importance of the adjustment of the pattern of world trade to the conditions emerging in the world and suggested that if countries with large Western Hemisphere deficits were to attain proper balance, increased sales in the Western Hemisphere would be necessary. With regard to the role of exchange rate adjustments, the Fund report said, inter alia:

Where a price reduction of the magnitude indicated above is necessary to expand exports, it would in many cases seem possible only through an adjustment in the

Countries with dollar payments difficulties are faced with the question of nother an exchange rate adjustment can help solve their problem. The immewhether an exchange rate adjustment can help solve their problem. The immediate purpose of an exchange adjustment is to increase substantially the foreign exchange receipts and particularly the dollar receipts from exports Every country with a payments problem—and this includes both surplus and deficit countries—has a direct interest in the establishment of exchange rates in other countries that will encourage a pattern of trade conducive to a better balance in international payments.

In the course of the summer of 1949 the Fund gave increased attention to the balance-of-payments problems of the member countries so as to be prepared to act promptly should members propose exchange rate adjustments. Under the Articles of Agreement, however, the Fund may not take the initiative in proposing specific exchange rate adjustments since "A change in the par value of a member's currency may be made only on the proposal of the member and only after

consultation with the Fund" (art. IV, sec. 5 (b)).

On September 18, 1949, the Fund announced that the United Kingdom had proposed, and the Fund had concurred in, a change in the par value of the pound sterling from the previous rate of \$4.03 to the pound to a rate of \$2.80 to the pound. With the approval of the Fund, proportional changes were made in the par values of other sterling-area countries 7 and by Denmark, Egypt, and Norway, an almost equivalent devaluation was made by the Netherlands, and smaller changes in their par values were made by Canada, Belgium, and Luxembourg. Several countries not members of the Fund, such as Israel, Jordan, Portugal, Spain, Sweden, and Western Germany,

Hearings before the Senate Foreign Relations Committee, pt. I. January 1948, p. 408.
 Hearings before the Senate Foreign Relations Committee, February 1949, p. 388.
 In March 1950 a further reduction to 6.14 cents per krona was made by Iceland with Fund concurrence.

made adjustments in their exchange rates. A number of countries which were Fund members but which did not have agreed par values, including Finland, France, Greece, Italy, and Thailand, with Fund approval devalued their currencies with respect to the dollar by announcing increased official rates for the dollar.

¹ All of the British territorial currencies, except that of British Honduras, were likewise devalued by 30.5 percent. The latter currency was devalued 30.0 percent, effective Dec. 31, 1949.
² Represents 2 separate devaluations of the krone. The first, occurring on Sept. 20, 1949, represented a reduction of 30.5 percent (from 15.411 to 10.705 United States cents per krone). The second devaluation of 42.6 percent (effective Mar. 20, 1950), brought the new par value of the krone to 6.14 United States cents.
² In November 1949 the Austrian Government increased its basic rate to 14.40 schillings to the dollar, with a premium rate of 26 schillings (used for invisibles and certain other transactions), and a "retention quota" of 60 percent for exports, yielding an effective rate of 21.36 schillings for exports. Subsequently the retention quotas were modified for various classes of transactions.

of 60 percent for exports, yielding an effective rate of 21.36 schillings for exports. Subsequently the retention quotas were modified for various classes of transactions.

4 The Belgian Congo franc remains at par with the Belgian franc.

5 The Finnish change shown here followed closely an earlier devaluation (from 0.735 to 0.625 cents permarkka), on July 4, 1949, and thus represents a total devaluation of 41 percent during recent months.

6 The old rate shown is for trade transactions. Under the official free market system used in France, the rates referred to here are technically flexible, though they may be held steady for relatively long periods. The new rate shown is as of Mar. 31, 1950. All local currencies of French dependencies are pegged to the French franc, except (1) the rupee of French possessions in India, which is maintained at par with the Indian rupee; and (2) the Djibouti franc, which retains its old dollar parity of 0.47 cents.

7 Under the exchange certificate system used in Greece, the rates referred to here are technically flexible, but for over a year proir to the current devaluation fluctuations in the old rate had been held to less tham

⁷ Under the exchange certificate system used in Greece, the rates referred to here are technically flexible, but for over a year prior to the current devaluation fluctuations in the old rate had been held to less than 1 percent in either direction.

8 Under the official free market system used in Italy, the rates referred to here are technically flexible, though they may be held steady for relatively long periods. The new rate shown is as of Mar. 31, 1950.

9 The change shown bere followed closely a minor adjustment (from 4.0124 to 4 cents per escudo), on Aug. 8, 1949. Portugal is not a member of the International Monetary Fund and has no par value. Rates shown are midrates between the official buying and selling rates.

10 Sweden is not a member of the Fund and has no par value. Rates shown are average rates between the official buying and selling rates.

11 Free market rate for imports.

12 Effective Sept. 20, 1949. However, on Mar. 13, 1950, further devaluation of the guilder was effected by means of the introduction of a certificate type of exchange control in the flexible buying and selling rates. On Mar. 31, 1950, the latter rates were quoted at one-half to one-third that of the official rate, which remained unchanged at 26.316 United States cents per guilder.

In the months immediately following these currency devaluations, a number of Latin American countries made changes in their exchange rate systems. These changes were intended in some instances to take account of the probable effect upon their economies of the devaluations of European currencies, particularly as they tended to affect the exports of primary commodities. These adjustments were also designed to curtail demand for imports. For the most part these changes did not take the form of the establishment of new par values, but of changes in various multiple-currency systems already in effect, which resulted in currency depreciations for particular types of transactions. Peru, however, suspended the par value of the sol and has since the suspension permitted the exchange rate to be determined in an exchange certificate market.

The United States Executive Director, acting in accordance with policy directives previously given to him by the Council, concurred in the Fund's decisions on these exchange adjustments. The Council believes that these adjustments of exchange rates will prove beneficial in the long run in providing part of the solution to the balance-of-payments problems of the member countries. By narrowing or eliminating disparities between dollar prices and the prices of commodities in soft currencies, the adjustments should facilitate the expansion of exports from these countries and hence a reduction in their dollar deficits. This should permit greater relaxation of barriers to multilateral trade and so contribute to the realization of one of the primary purposes of the Fund and of United States international economic policy.

How effective exchange rate adjustments can be in contributing to a lasting reduction in disequilibrium in balances of payments depends on financial and economic developments within the countries

depends on financial and economic developments within the countries

**Argentina*: On October 1, 1949, Argentina announced extensive changes in the existing multiple exchange rate system, but left unchanged the basic export rate in terms of dollars. Argentina is not a member of the Fund and has no par value. The basic buying rate for the peso is 29.77 United States cents; Bolivia: In February 1950, two of the three existing rates were altered, but there was no change in the par value of 2.38 United States cents per boliviano. On April 8 the 2.38 rate was abandoned. One of the remaining two rates, 1,667 United States cents per boliviano, became the new parity. Several additional effective rates result from the sale of varying proportions of export proceeds at the two specified rates: Chile: On January 10, 1950, the Fund announced that Chile bad introduced a new temporary rate of 1.667 United States cents per peso. Although this action, with Fund concurrence, did not constitute a formal revaluation of the peso, it was regarded as the first step in a program of unifying Chile's complex multiple rate structure and of establishing a new par value; Costa Rica: On April 1, 1950, without objection by the Fund, Costa Rica modified its multiple exchange rate system. No change was made in the par value (17.8 cents per colon) or in the official buying rate, but there was some effective depreciation of the selling rates by requiring imports in the three least favored of the four import categories to be financed in the free market and by increasing the exchange surcharges which apply at various rates. Four effective selling rates are thus established, and a fifth effective rate may be established by the creation of a fifth import category to which a particularly high surcharge rate would apply: Ecuador: In December 1949, without the approval of the Fund, Ecuador discontinued the use of its established par value (7.41 United States cents per sucre), as a buying rate for export proceeds. The par value of the sucre was not form

concerned. In this connection the Fund warned, in its Annual Report of April 30, 1949:

For exchange adjustment to be successful, it is essential that the expected benefits should not be dissipated by an offsetting rise in local prices and costs. It must, therefore, have public support and be accompanied by appropriate fiscal and credit policies. If the public recognizes that an expansion of exports is necessary to maintain the flow of imports, and is prepared to accept higher import prices without insisting on corresponding changes in incomes, exchange adjustments in the deficit countries should involve only a relatively small rise in the cost of living. If, however, the public is insistent on offsetting by higher incomes even a moderate rise in the cost of living, the result will be the almost complete dissipation of the benefits of exchange adjustment. Even if an exchange adjustment is accomplished without a significant rise in prices and costs, it would be futile if the greater demand abroad were not matched by an equivalent supply of exports. Unless home demand is restrained, the expansion of exports, which alone can justify an exchange adjustment, will not be achieved.

As was mentioned above, seven member countries have not proposed par values for their currencies and three others have abandoned their par values and have not proposed new ones to the Fund. countries for the most part have been suffering from the economic dislocations attendant upon internal inflation and other conditions which have tended toward instability in their international payments Where conditions are manifestly unstable, little is to be gained by a merely formal declaration of par values, if the country concerned cannot in practice maintain the degree of stability which would make the par value effective. But the Council considers that the system of par values and unitary rates called for by the Articles of Agreement of the Fund is fundamentally sound, and that the Fund provides a satisfactory mechanism for facilitating needed changes. Accordingly, where a country's internal situation has approached a reasonable state of stability, the Council believes that the declaration of a par value and the maintenance of conditions of stability would be in the interest of the member concerned and of the world at large. the period ahead, as world trade adjusts to a declining volume of extraordinary United States financial assistance, it will be important that the exchange pattern of the world be kept under review and that adjustments in individual exchange rates be made from time to time if developing conditions so require.

2. EXCHANGE RESTRICTIONS AND MULTIPLE-CURRENCY PRACTICES

One of the ultimate objectives of the Fund is the establishment of a multilateral system of payments for international transactions and the elimination of exchange restrictions on current international transactions. At the time the Fund Agreement came into operation almost all of the countries of the world had in effect some controls over exchange transactions. These controls take the form of limitation on payments in certain currencies or payments for particular types of transactions, or both. In many countries there have been multiple-currency systems, varying greatly from country to country, designed to deal with balance-of-payments deficits but providing incidental or deliberate protection to some producers and export subsidies to others. In these systems the price of a dollar in terms of local currency may vary with the commodity purchased, or foreign exchange for certain purposes may be obtained only through purchase

on the open market where the price is higher than the official rate available for preferred transactions. Moreover, multiple-currency practices and exchange restrictions are supplemented by direct controls of trade or other transactions insofar as import licenses or other special permission of government may be required before a transaction can be consummated.

The Fund Articles require that exchange restrictions be progressively Under article VIII, members may not impose restrictions on payments and transfers for current transactions without the approval of the Fund and members may not engage in discriminatory currency arrangements without the approval of the Fund, except insofar as they may be authorized by the Agreement. The restrictions in effect at the entry into force of the Agreement were to be removed progressively by the member countries unless they took advantage of the transitional privileges provided by article XIV, section 2. These provisions permit member countries to maintain and adapt to changing circumstances restrictions on current account transactions, and in the case of members which had been occupied by the enemy, to introduce Members availing themselves of the transitional period provisions are not obligated to convert foreign-held balances but they are expected to abandon their restrictions as soon as they are able

In accordance with article XIV, section 4, the Fund is required to prepare a report on the restrictions still in force under the transitional arrangements 3 years after the date the Fund began operations. Each year thereafter a similar report is to be made on such restrictions The first of these reports was presented to the member governments in April 1950. Five years after the date of the Fund's initial operations, i. e., March 1952, any members retaining restrictions inconsistent with article VIII, sections 2, 3, and 4 (which require the conversion of foreign-held balances and the avoidance of restrictions on current payments and discriminatory currency practices), must consult with the Fund as to their further retention. Such consultations are to take place annually thereafter. The Fund in exceptional circumstances may make representations to a member that conditions are favorable for the withdrawal of particular restrictions, and if the member, after consultation, persists in maintaining such restrictions despite the Fund's objections, it may be required to withdraw from

On November 8, 1946, the Fund requested the members to state whether they chose to take advantage of the transitional provisions or whether they were willing to accept the obligations to maintain nondiscriminatory currency practices and to avoid restrictions on current transactions and on conversion of foreign balances. countries which have accepted these obligations are El Salvador, Guatemala, Mexico, Panama, and the United States. The currencies of these countries alone are, therefore, regarded as convertible currencies within the meaning of the Fund's Articles. All other countries have taken advantage of the transitional period privileges, although, as the Fund's recent report on exchange restrictions explains, several other countries maintain restrictions so mild in effect as to bring them very close to convertibility.

The Fund's report on the restrictions in force March 1, 1950, has

described in detail the nature of these restrictions, but, in view of their wide prevalence, has not attempted to formulate a program for removal of restrictions by the member countries as a whole. Fund holds that these restrictions should be removed at the earliest date possible, but recognizes that under present conditions progress may have to be made gradually. The Fund, however, has, from time to time, consulted with many members individually on their foreign exchange practices. These consultations have taken place in Washington or in the countries concerned, generally when the member country has requested the Fund to send a mission to discuss exchange restrictions, multiple-currency practices and cognate issues. The Fund has examined these cases carefully and has obtained agreement on some modifications of the exchange practices of various member countries to move them in the direction of less discrimination and toward greater multilateralization of their trade arrangements. stantial changes in multiple-currency practices require the approval of the Fund, because these changes usually involve exchange rate adjustments even though the par value itself is not modified. In some instances, the Fund has not objected to certain multiple-currency practices, on the grounds that in these cases the transition to the desirable system could not quickly be made.

The Fund's attitude on exchange restrictions and multiple-currency practices has been to press for a reduction in or a removal of restrictions and the abandonment of, or a simplification of, multiple-currency practices, country by country, as each case arises; but at the same time to recognize the substantial difficulties which countries face as they endeavor to move toward unified and stable exchange systems with a minimum of restrictions. The National Advisory Council has concurred in The slow rate of progress has been a disappointthe Fund's attitude. ment, but the United States itself has recognized the special difficulties of the European area through its European Recovery Program and other forms of international assistance. The conditions which have called forth this aid program have largely been responsible for the persistence of restrictions on trade by the European countries, which have found themselves without adequate resources and adequate earnings in dollars to cover their requirements from the Western Hemisphere. The time is approaching when greater efforts must be made by the member countries in Europe and elsewhere to bring about conditions of multilateral trade and exchange in conformity with the Fund's objectives. Many countries, in the formulation of their policies, have probably overestimated the difficulties and underestimated the advantages of transition from restricted to unrestricted payments systems. It is clear that the Fund cannot adequately function in an economic world in which the bulk of the member countries maintain international exchange and trade policies and practices which are clearly out of harmony with the objectives of the Fund.

3. USE OF THE FUND'S RESOURCES

The Articles of Agreement limit the Fund's operations in general to "the purpose of supplying a member, on the initiative of such member, with the currency of another member in exchange for gold or the currency of the member desiring to make the purchase" (art. V. sec. 2). These currency transactions are intended to give assistance to members in financing temporary balance-of-payments deficits on

current account for monetary stabilization operations.

There have been further developments with regard to the Fund's policy in the use of its resources since the submission of the First Special Report of the Council to the Congress. The first drawings on the Fund's resources had been made principally by the European countries, and at the time these drawings were made the Council concurred in them as a means of dealing with the immediate need for foreign exchange. As conditions developed subsequently, it became clear that the European situation was more serious than had originally been anticipated, and that the amount required for the reconstruction of Europe, even for current account transactions, was far greater than could be provided through the resources of the Fund and the Bank. It was clear that the European countries were in a condition of fundamental, rather than temporary, disequilibrium and that a remedy for the situation was to be sought in other means than the use of the Fund's resources. With the introduction of the European Recovery Program there was no further occasion for the European countries to attempt to finance their balance-of-payments deficits through the Fund's limited supply of dollars. Accordingly, the Fund Board, in a decision on April 5, 1948, in which the United States concurred, resolved that during the continuance of the European Recovery Program member participating countries should not draw on the dollar resources of the Fund, except under exceptional or unforeseen circumstances. This policy has continued in effect.

In the first 4 years of operations, the Fund made total currency sales equivalent to 783.4 million United States dollars in exchange for other member currencies and gold. Of this amount, sales of United States dollars against other member currencies were 759.8 million. As of March 31, 1950, the Fund's United States dollar holdings amounted to 1.30 billion in dollar deposits and noninterest-bearing notes. In addition, the Fund held 1.46 billion dollars in gold. The Fund's gold and dollar resources thus are the equivalent of about 2.76 billion dollars. These resources will, of course, be increased by such currency repurchases with gold and dollars as occur in the future. It is apparent that under present conditions the greatest demand for currencies from the Fund will be a dollar demand and that unless the Fund rigorously scrutinizes all requests for drawings and limits them for use strictly in accordance with the letter and spirit of the Fund's Articles, the Fund's ability to supply dollars might be greatly impaired within a

relatively short period of years.

Within the Fund itself there has been discussion of the precise terms on which the Fund's resources should be made available. One view, in its extreme form, is that drawings on the Fund should be almost automatic and that the Fund should honor all requests for drawings whenever the member has an agreed par value, has not formally been declared ineligible to draw under the Articles of Agreement, and certifies that the currency is needed to meet a deficit on current account. In practice, however, the Fund, without a formal declaration of ineligibility, may indicate that it would regard drawings as inadvisable in the case of members whose internal and external situations are such that their balances-of-payments deficits could not be regarded as

Moreover, in every request for a drawing, the Fund has (and exercises) the right to make a careful examination of the current and prospective payments position of the member with a view to determining whether the use of the resources of the Fund is likely to be temporary.

Table IV.—Currency sales of the International Monetary Fund, Apr. 1, 1947, to Mar. 31, 1950

Note.—Except where otherwise indicated, all sales were of United States dollars in exchange for the currency of the purchasing country.

Source: International Monetary Fund.

The Council approves a strict application of this criterion by the Fund to any requested drawings. The fifth purpose of the Fund, i. e., "to give confidence to members by making the Fund's resources available to them under adequate safeguards thus providing them with opportunity to correct maladjustments in their balance of payments without resorting to measures destructive of national and international prosperity," implies that the Fund must give proper regard to the prospects of repurchase of currencies from the Fund so that the Fund's resources will not be dissipated. Decisions on specific applications must be considered in the light of the Fund's purposes, which include the promotion of exchange stability, the maintenance of orderly exchange arrangements, the establishment of a multilateral system of payments in respect of current transactions, and the shortening of the duration and lessening of the degree of disequilibrium in the international balances of payments of members. In the view of the Council retention of exchange restrictions on current account trans-

actions or quantitative import controls by a member of the Fund should be considered as prima facie evidence of fundamental disequilibrium. In such instances, a drawing on the Fund's resources should not be permitted without careful scrutiny of the borrower's balance-of-payments position and prospects for restoring equilibrium. Before permitting a drawing, the Fund should be satisfied that the program of the country in question designed to restore equilibrium is adequate, and should from time to time carefully review the impact of internal fiscal policies on the payments position of the country, the appropriateness of its exchange rate, the impact on its balance of payments of reconstruction and development programs and all other pertinent factors affecting its general payments position.

4. REPURCHASE OF CURRENCIES SOLD TO THE FUND

The Fund was conceived of as an international pool of currencies whose total value would remain unimpaired, but whose composition would vary with the conditions of the international exchange situation. This pool was not intended as a means of providing long-term loans. The Fund's Articles were also predicated on the assumption that most of the member currencies would be convertible, so that a member drawing one currency from the Fund would in due course be able to repurchase the Fund's holdings of its currency by offering gold or other convertible currencies in exchange. As noted above, only the United States dollar and the currencies of a few other Western Hemisphere countries are convertible currencies in the meaning of the Fund's Articles and, accordingly, available to make repurchases from the Fund under article V, section 7 (b).9

Repurchase obligations have arisen in the case of Belgium and Costa Rica in accordance with these provisions, and the countries concerned have repurchased their currencies with gold and dollars in accordance with the Articles of Agreement. In 1949 Nicaragua voluntarily repurchased from the Fund the cordobas which had been

paid for a purchase of dollars in 1948.

In a great many of the countries which are members of the Fund, the repurchase obligation would not arise under present conditions either because their gold and dollar reserves are smaller than their quotas, or because they are not likely to increase their holdings of gold and dollars in the immediate future in an amount sufficient to require repurchase. Moreover, members of a currency group such as the sterling area customarily hold only small or even nominal gold reserves and, if the currency in which they hold their foreign exchange

⁹ This article provides, inter alia, that at the end of each financial year of the Fund, each member is required to repurchase its currency from the Fund in an amount equivalent to one-half of any increase in the Fund's holdings of its currency in the course of the year, plus one-half of any increase in the country's monetary reserves, or minus one-half of any decrease in the member's monetary reserves during the year. (Monetary reserves are defined as gold and convertible currencies.) This repurchase obligation, however, may not extend to the point where (1) The member's monetary reserves are below its quota; or (2) The Fund's holdings of its currency are below 75 percent of its quota; or (3) The Fund's holdings of any currency required to be used in the repurchase are above 75 percent of the quota of the member concerned. This means that, if a member's monetary reserves are smaller than its quota, it has no automatic obligation to repurchase. It also means that, if a country's monetary reserves increase rapidly so that the application of the formula would reduce the Fund's holdings of the currency below 75 percent, it would not apply, i.e., no member may be required to make payments in gold or convertible currencies to the Fund more than 25 percent of its quota, unless its own currency is in fact convertible. Finally, the effect of a repurchase obligation by member countries may not be such as to require the Fund to hold more than 75 percent of the quota of a country whose currency is used to make the repurchase because the result would be to oblige that country to reduce the Fund's holdings of its currency by additional gold or convertible currency payments.

reserves (e. g., pounds sterling) is inconvertible, the automatic repurchase obligations described above would not operate. Under these circumstances, drawings of dollars from the Fund are likely to result in the accumulation by the Fund of inconvertible currencies and a

gradual reduction in the Fund's ability to supply dollars.

As has been noted, the Fund's Articles were predicated on the assumption of convertibility of the major currencies of the world so that any country, whose general balance-of-payments situation was satisfactory, would be able to use the currencies obtained from its normal international transactions for the repurchase of its currency within a reasonably short period, say, 4 or 5 years. With currencies generally inconvertible, only earnings of dollars from the Western Hemisphere, or from other countries receiving dollars in payment of goods, and gold derived from current production, or through exchange transactions, are available to satisfy repurchase requirements. Fund is thus faced with problems somewhat different from those originally contemplated. To permit drawings under these circumstances, with little assurance that there will be a repurchase within a few years, would result in a steady deterioration of the Fund's assets. Some assurance that conditions in a country will result in a probable repurchase within a few years would seem to be a desirable condition precedent to Fund drawings. The National Advisory Council has favored careful consideration by the Fund of the problem of currency repurchases under the conditions which are likely to prevail in the immediate future.

5. CONCLUSIONS AND RECOMMENDATIONS

In the present state of world affairs, characterized by currency inconvertibility, disequilibrium in international accounts and the maintenance of exchange and trade restrictions, the resources of the Fund can be used effectively only to a limited extent to promote the basic objectives for which the Fund was established and which are part of the United States international economic program, i. e., the achievement and maintenance of multilateral nondiscriminatory international payments with a minimum of restriction on current account exchange transactions. It is clear that the time when the Fund can be most effective in stabilization operations is in the future when greater progress has been made toward reaching the conditions originally predicated for the Fund's most successful operation. It is in accordance with this belief that the National Advisory Council favors only moderate and prudent use of the Fund's resources to assist member countries in meeting genuinely temporary deficits.

In the interim, nevertheless, the Fund has an important role as an international consultative body and as a forum for dealing with important questions relating to foreign exchange. In the long run this may prove to be the Fund's greatest contribution to the solution of the international economic problems of our times. It has on the request of many member governments sent missions to make studies of their exchange and balance-of-payments situations and the related monetary and financial matters which affect their ability to achieve and maintain exchange and trade equilibrium. Some of the member countries have benefited greatly from these studies and from the

Fund's advice and suggestions tendered through these missions and through consultations at the Fund's headquarters. Moreover, the continual discussion in the Fund's Board of the problems of the various countries, as they come to the Fund's attention, has served to acquaint countries with each other's problems and so to view their own programs in the light of broader considerations of general economic policy. In this way the Fund's activities in the financial field also serve as a valuable element in the program of technical assistance proposed by the President.

The Council has considered the questions specified in section 4 (b) of the Bretton Woods Agreements Act. It does not believe that the United States subscription to the International Monetary Fund should be changed under the conditions which are likely to prevail in the immediate future. The Council believes that the Fund's resources should be conserved for the purposes specified in the Articles of Agreement and in the Bretton Woods Agreements Act. Since the Articles of Agreement admit of considerable flexibility in adjusting the operations of the Fund to the emerging patterns of world trade and finance, the Council does not propose any amendments at this time. In its opinion, present conditions and the conditions of the immediate past have not given adequate opportunity to test the effectiveness of the Fund as a stabilizing mechanism and as a means for maintaining orderly exchange arrangements in a world of freer trade and greater stability.

Exhibit 29.—Report of activities of the National Advisory Council on International Monetary and Financial Problems, October 1, 1949, to March 31, 1950

[House Document No. 658, 81st Congress, 2d session]

LETTER OF TRANSMITTAL

To the Congress of the United States:

I transmit herewith a report of the National Advisory Council on International Monetary and Financial Problems covering its operations from October 1, 1949, to March 31, 1950, and describing, in accordance with section 4 (b) (5) of the Bretton Woods Agreements

Act, the participation of the United States in the International Monetary Fund and the International Bank for Reconstruction and Development for the above period.

HARRY S. TRUMAN.

THE WHITE HOUSE, July 25, 1950.

REPORT OF ACTIVITIES OF THE NATIONAL ADVISORY COUNCIL ON INTERNATIONAL MONETARY AND FINANCIAL PROBLEMS, OCTOBER 1, 1949, TO MARCH 31, 1950

I. Organization of the Council

STATUTORY BASIS

The National Advisory Council on International Monetary and Financial Problems was established by the Congress in the Bretton Woods Agreements Act (59 Stat. 512, 22 U. S. C. 286b), approved July 31, 1945. The statute directed the Council to coordinate the policies and operations of the representatives of the United States on the International Monetary Fund and the International Bank for Reconstruction and Development, the Export-Import Bank of Washington, and all other agencies of the Government "to the extent that they make or participate in the making of foreign loans or engage in foreign financial, exchange, or monetary transactions." The Council was also directed to advise and consult with the President and the United States representatives on the Fund and the Bank on major problems arising in the administration of the Fund and the Bank; and to recommend to the President general policy directives for the guidance of the representatives of the United States on the Fund and the The Council was given certain additional duties with regard to the economic assistance program, and the Bretton Woods Agreements Act was amended by section 106 of the Foreign Assistance Act of 1948 (62 Stat., ch. 169, 22 U. S. C. 286b (a)), approved April 3, 1948, to include the Administrator for Economic Cooperation as a member of the Council for the duration of this office.

In June 1949, the Bretton Woods Agreements Act and the National Bank Act were amended (63 Stat. 298; 12 U. S. C. 24; 22 U. S. C., 286k-1, 286k-2), to permit wider dealing in and underwriting of International Bank securities and to exempt such securities from the Securities Acts. The legislation also authorized the Securities and Exchange Commission, acting in consultation with the Council, to suspend the exemption of International Bank securities from the Securities Acts.

The relevant portions of the Bretton Woods Agreements Act, the Foreign Assistance Act of 1948, and amendments to the National Bank Act and the Bretton Woods Agreements Act are presented in appendix A.

REPORTS

Since its first meeting on August 21, 1945, the Council has submitted 11 formal reports, including two special biennial reports on the operations and policies of the International Monetary Fund and the International Bank.¹ The present report covers the activities of the Council from October 1, 1949, to March 31, 1950.

MEMBERSHIP

The members of the Council, according to law, during the period under review, were the following:

The Secretary of the Treasury, John W. Snyder, Chairman.

The Secretary of State, Dean Acheson.

The Secretary of Commerce, Charles Sawyer.

The Chairman of the Board of Governors of the Federal Reserve System, Thomas B. McCabe.

The Chairman of the Board of Directors of the Export-Import Bank, Herbert E. Gaston.

The Administrator for Economic Cooperation, Paul G. Hoffman.

By agreement, the following served as alternates:

William McChesney Martin, Jr., Assistant Secretary of the Treasury.

Willard L. Thorp, Assistant Secretary of State for Economic Affairs.

Thomas C. Blaisdell, Jr., Assistant Secretary of Commerce.

M. S. Szymczak, member of the Board of Governors of the Federal Reserve System.

Hawthorne Arey, Vice Chairman of the Board of Directors of the Export-Import Bank.

William C. Foster, Deputy Administrator, Economic Cooperation Administration.

C. Dillon Glendinning is the Secretary of the Council.

The United States Executive Directors of the International Monetary Fund, Frank A. Southard, Jr., and of the International Bank for Reconstruction and Development, William McChesney Martin, Jr., or their Alternates, regularly attended the meetings of the Council.

¹ The two special reports were transmitted by the President to the Congress on May 17, 1948 (H. Doc. No. 656, 80th Cong., 2d sess.), and May 31, 1950 (H. Doc. No. 611, 81st Cong., 2d sess.). The remaining reports were transmitted on March 1, 1946 (H. Doc. No. 489, 79th Cong., 2d sess., subsequently included as appendix B to H. Doc. No. 497, 79th Cong., 2d sess.), Hanuary 13, 1947 (H. Doc. No. 53, 80th Cong. 1st sess.); January 13, 1947 (H. Doc. No. 501, 80th Cong., 1st sess.); January 19, 1948 (H. Doc. No. 501, 80th Cong., 1st sess.); January 19, 1948 (H. Doc. No. 501, 80th Cong., 2d sess.), March 14, 1949 (H. Doc. No. 120, 81st Cong., 1st sess.); July 5, 1949 (H. Doc. No. 250, 81st Cong., 1st sess.); and January 20, 1950 (H. Doc. No. 450, 81st Cong., 2d sess.).

II. THE UNITED STATES BALANCE OF PAYMENTS IN THE POSTWAR Period

A basic concern of foreign nations in the postwar period has been that of the means of financing required imports from the United States. Between July 1945 and December 1949, total United States exports of goods and services amounted to 74.8 billion dollars, while total imports amounted to 39.5 billion dollars, or 53 percent of that The remainder of the necessary financing was provided chiefly from United States Government sources, largely credits and grants, of 25.5 billion dollars, or 34 percent, and liquidation of foreign gold and dollar assets of 6.1 billion dollars, or 8 percent. These three main components of the balance of payments-foreign trade, Government aid, and changes in gold and dollar assets--are discussed briefly in the following sections.

Table I.—The United States balance of payments, July 1, 1945, to Dec. 31, 1949 [In millions of dollars]

		Means of financing					
Period	Total exports of goods and services	Total imports of goods and services	U. S. Government sources (net)1	Liquidation of gold and dollar assets	Other 3		
Total Postwar	74,786	39, 466	25, 463	6,099	3,758		
1945—July-December	7, 201	4, 143	3, 629	4 -1,077	506		
1946—January-June	7, 235	3, 328	2, 569	823	515

1949—January-June	8, 765	4, 968	· 3, 337	364	96		
July-December	7, 191	4, 747	2, 610	4 —362	196		

¹ Data on U. S. Government sources (net) presented in this table and chart A differ from U. S. Government aid in chart B and table IV and the statistical appendix for the following reasons:

(a) Data in the above table are net of unilateral transfers to the United States, capital repayments, etc., whereas gross data appear in chart B.

(b) Pensions, annuities, claims of individuals, etc., are included in this calculation of net sources, but are excluded in chart B.

⁴ Net foreign acquisition of dollar assets and purchases of gold from the United States, resulting from an excess of means of financing over exports.

Source: U. S. Department of Commerce.

⁽c) Included in the calculation of net sources are lend-lease shipments and merchant ship deliveries, whereas aid appearing in chart B is based on lend-lease billings and mortgages signed, both of which lag. As a result of these lags, net source figures reported for the earlier period in the above table exceed those appears to the second secon pearing in chart B.

Figures in this table differ from those which could be derived from table V principally because table I includes gold sold out of current production abroad, as well as liquidation of existing foreign holdings. I Includes dollar disbursements by the International Monetary Fund and the International Bank, United States net private remittances, United States net private long- and short-term capital outflow, and errors and omissions.

CHART A

United States foreign trade

United States exports of goods and services, already at a high level, reached a postwar peak in the middle of 1947, and subsequently declined rather steadily. Imports reached their high point in the latter part of 1948, dropped somewhat in 1949, but increased again in the early part of 1950. In each postwar year through 1949, however, the excess of United States exports over imports has been over 6 billion dollars.

United States exports of goods and services in 1949 amounted to 16.0 billion dollars as compared with imports of 9.7 billion dollars. As indicated in table II, the surplus of United States exports over imports was narrowed to an annual rate of 4.4 billion dollars in the fourth quarter of 1949 while in the first quarter of 1950 the difference was further reduced to an annual rate of 2.6 billion dollars per year. This sharp decline may not continue through 1950. Nevertheless, it compares with the 1948-49 average excess of United States exports over imports of 6.5 billion dollars. Thus, the change in trade since September 1949 has had the effect, at least temporarily, of sharply reducing the over-all trade deficit of foreign countries with the United States.

The period between September 1949 and March 1950 is too short to permit an appraisal of the ultimate effects of the currency devaluations which occurred in the fall of 1949. It is also difficult to separate, statistically, the effects of devaluation on the foreign trade of the United States from the effects of measures to conserve dollar exchange, such as exchange and import restrictions and bilateral trade agreements. The devaluation of foreign currencies vis-à-vis the dollar was responsible, at least in part, for an improvement in the balance-of-payments position of the devaluing countries, including the ERP countries, which were able to increase the volume of their merchandise exports.

Table II.—United States exports and imports of goods and services, by quarters, July 1, 1945, to Mar. 31, 1950

The United States share of world merchandise exports has increased both in quantitative and in value terms above prewar levels, our exports during 1949 accounting for about one-fifth of total world exports and our imports amounting to about one-eighth of world imports. While this country is presently the greatest single exporting nation in the world, the western European countries, most of which are participants in the European Recovery Program, accounted for about one-third of total world exports in 1949 and about two-fifths of world imports. The percentage of foreign trade to the gross national product, moreover, is relatively small for the United States as compared with other major trading nations.

One of the salient features of changes in world trade during the postwar period, as compared with prewar, has been the increased amount of trade between the United States and other nations of the Western Hemisphere. Another factor, which has represented a shift in the postwar world trading pattern as compared with prewar, has been the decline in the positions of both Germany and Japan as major trading nations. In addition, a number of other countries, severely affected by the war, have been unable to supply their needs through exports but have, in part, been dependent on foreign aid to maintain subsistence. The western European countries imported the products of the Western Hemisphere to a greater extent than in the

prewar period. (The change in the pattern of world trade in the postwar period is reflected in table III.)

In the early postwar period, the demand of war-devastated countries was largely for consumption goods. Later there was a shift in emphasis to reconstruction and recovery programs, and the demand for capital goods increased, although many countries have continued their demands for consumption goods. Important United States exports include machinery, iron and steel manufactures, textiles, and such agricultural products as wheat and cotton. Major imports include newsprint, coffee, certain ores and metals, natural rubber,

wool, and vegetable oils.

The most important shift in the postwar foreign trade of the United States has been the tendency for this country to run a food export surplus, whereas in the prewar period the United States was a net importer of food. However, it should be noted that the United States had abnormal exports in the early postwar years, particularly in 1947, because of the transition abroad from a wartime to a peacetime economy, when nonrecurring United States exports of such items as coal and certain agricultural products were essential to foreign economic recovery. Illustrative of this was the export of bituminous coal to certain areas of Europe which normally were able to meet their requirements from European sources. But the return to a closer balance in conditions of supply and demand which was in evidence

during 1949 was reflected in a decreased flow of United States exports,

particularly during the latter part of 1949.

Invisibles, such as shipping and the foreign travel of American citizens, constitute a major component of the foreign trade of the United States. In prewar years, greater use was made of the ships of other countries than of those of the United States. During the early postwar period, American shipping earnings were high because foreign nations had not wholly repaired war shipping losses, while United States tonnages had substantially increased. The larger participation of United States vessels in the carriage of American foreign trade and the large excess of United States exports over imports contributed to high shipping earnings. However, more recently a greater proportion of United States overseas trade has been carried in foreign ships. Other invisibles, particularly the foreign travel of American citizens, are of significance in financing United States exports.

Foreign aid

As pointed out in the preceding Report of the Council, funds authorized and appropriated for the immediate postwar programs of assistance were substantially exhausted by mid-1948. By that time, the European Recovery Program had swung into operation. In addition, there were continuing programs of aid such as that provided under Government and Relief in Occupied Areas. The normal lending activities of the Export-Import Bank were continued throughout the postwar period. The Mutual Defense Assistance Program, military-economic in nature, was approved in October 1949, and shipments were begun in March 1950. During the latter part of 1949, there was some decline in the aggregate amount of foreign aid. However United States Government foreign aid has not varied greatly in amount, averaging about 5.8 billion dollars per year since July 1945.

Table IV.—U. S. Government foreign aid, utilized, July 1, 1945, to Dec. 31, 1949, by geographic area

Source: Department of Commerce.

The total of United States Government foreign aid, utilized during the period between July 1, 1945, and December 31, 1949, amounted to 25.9 billion dollars of which grants constituted approximately three-fifths, or 15.7 billion dollars and credits two-fifths, or 10.2 billion dollars. (See table IV.) Almost three-fourths (18.5 billion dollars) of total assistance had been provided to ERP participants, with Asia the geographical area receiving the next largest share (4.6 billion dollars). The predominance of grant assistance during the past 2 years is

CHART B

apparent from the accompanying chart, which shows that utilized grant assistance amounted to 4.0 billion dollars in 1948 and 5.2 billion dollars in 1949, as compared with utilized credit assistance of 1.6 billion dollars and \$700,000,000 in 1948 and 1949 respectively.

Foreign gold and dollar reserves

As indicated above, the two principal means of financing United States exports have been the payments accruing to foreigners as the result of United States imports, and the provision of United States Government aid in the form of loans and grants. A third important means of financing balance-of-payments deficits has been through the use of foreign gold and dollar resources. The reserve position of foreign countries had declined by about 4.8 billion dollars from June 30, 1945, through December 31, 1948. (See table V.) On December 31, 1949, the estimated gold and short-term dollar holdings of foreign countries, excluding the gold holdings of the U. S. S. R., amounted to 15.2 billion dollars as compared with 14.9 billion dollars at the end of The increase during 1949 of about \$350,000,000 in monetary reserves represented a marked reversal of the previous postwar trend.² In recent years, the acquisition of gold by the United States has generally been in excess of annual world gold production. However, it may be noted that the flow of gold for settling balance-of-payments deficits could not be continued at this rate since few countries are substantial producers of gold and few have had gold and dollar re-

² The net difference between the 6.1 billion dollars referred to earlier as constituting liquidation of gold and dollar assets between July 1, 1945, and December 31, 1949 (see table I), and the 4.5 billion dollar reduction in foreign gold and dollar balances indicated in table V is largely accounted for by sales of gold to the United States out of current foreign gold production.

Devaluation has been responsible, in part, for changing the direction of the flow of gold and short-term capital between the United States and foreign countries. For the six-month period ending on March 31, 1950, foreign countries increased their gold and short-term dollar holdings, through transactions with the United States, by more than the losses which they had sustained during the first three quarters of 1949. In addition to these gains, the reserves of foreign countries were also augmented by new gold production.

United States investments abroad

From the end of 1945 to the end of 1949, United States private investments abroad increased nearly one-third or about 4.6 billion Over the same period United States Government investments, a large part of which were directed to the European countries, rose from 2.1 to 13.5 billion dollars.3 A large part of the additional postwar private investment was made up of reinvested earnings. Such income was largely derived from overseas petroleum production and from American manufacturing and mining enterprises in foreign countries.

Table VI.—United States investments abroad in the postwar period [In billions of dollars]

CHART C

DISTRIBUTION OF U.S. INVESTMENTS ABROAD

Source: Deportment of Commerce

359

Private United States investments abroad are predominately long-term, and include a large proportion of direct investments. United States Government investments abroad have resulted mainly from the extension of loans and credits and are thus also very largely long-term. United States private investment in ERP countries increased very little in the postwar period, and presently constitutes about 20 percent of total private investment abroad. On the other hand, United States Government investment in ERP countries has increased much more rapidly than in the rest of the world, and comprises about 60 percent of public investment abroad.

While the recent devaluations tended to reduce the transfer problem with respect to private equity investment, they had a tendency to increase the local currency burden of servicing debt denominated in dollars. This particularly affects ERP countries where most of the debts owing to the United States Government are concentrated. The total foreign debt service owing to the United States Government on existing loans will increase from about \$300,000,000 in 1950 to about \$500,000,000 in 1952, and thereafter decline to a level somewhat in

excess of \$400,000,000 per year.

Foreign assets in the United States have varied very little in the aggregate in the postwar period, fluctuating around a level of about 17.0 billion dollars. These holdings mainly consist of short-term assets, such as dollar deposits and United States Government securities with short maturities.

As of December 31, 1949, American-owned assets in foreign countries exceeded foreign-owned assets in the United States by more than

15 billion dollars.

III. Activities of the Council From October 1, 1949, to March 31, 1950 (Other Than Those Relating to the International Monetary Fund and the International Bank)

EUROPEAN RECOVERY PROGRAM

Appropriation request and proposed method of allocation for ERP, fiscal year 1951

During February 1950, the Council concurred in ECA's proposal that approximately 3 billion dollars should be recommended to the Congress as the appropriation request for the European Recovery Program for the fiscal year 1951. In determining its appropriation request for this period, the ECA had based its calculations on a consolidated balance-of-payments projection for the recipient countries as a group, including an evaluation of commodity-import programs. The estimated dollar requirements represented roughly 75 percent of the 3.9 billion dollars in appropriation and authorization ECA had received for the fiscal year 1950.

During the first 2 years of the European Recovery Program, aid to the individual countries was based upon the amounts indicated as necessary to restore and improve levels of internal production and consumption. In anticipation of the tapering-off of the program to its end on June 30, 1952, proposed allocations of assistance for the fiscal year 1951 were based on proportionate shares of the amounts previously allotted to the individual countries. Also, it was planned that a central reserve fund would be set aside to be utilized in connection with the proposed European Payments Union and in other ways to contribute to the liberalization of trade in Europe.

The over-all estimate of ECA appeared reasonable in the light of anticipated dollar requirements for the recipient countries as a group for the fiscal year 1951. It was recognized that there would be variation in performance among countries, as in the past, with the possibility of corresponding fluctuations in reserves of the individual recipient

countries.

Proposed legislation was submitted by ECA to provide funds for the fiscal year 1951 totaling 2.95 billion dollars, in addition to which it was requested that any balances unobligated as of June 30, 1950, or the subsequent release of obligations (estimated at about \$150,000,000) be made available for obligation through the fiscal year 1951. Of this total appropriation request, it was proposed that about \$600,000,000 be reserved to provide for the liberalization of European trade and payments, including the establishment of a European Payments Union, while the remaining funds would be primarily for direct country aid. In the ECA presentation to the Congress, it was stated that the main function of the proposed EPU would be "the development of transferability of European currencies and to promote the liberalization of trade by participating countries with one another and with other countries."

ECA grants and loans

As indicated in table VII, the bulk of ERP assistance has been in the form of grants. Moreover, the bulk of ECA loans, amounting to about 1 billion dollars was negotiated during the first year of the program. In the fiscal year 1949, funds equal to that amount were available only for the purpose of making loans or guaranties. The Council considered that assistance for the fiscal years 1950 and 1951 should be predominantly on a grant basis but recommended that the Administrator for Economic Cooperation seek discretionary authority with respect to the total amount appropriated for the program (exclusive of the amount provided for guaranties) to extend such assistance either on a grant or a loan basis. This action was designed to preserve Europe's capacity to borrow through normal investment channels in the post-ERP period.

⁴ On June 5, 1950, President Truman signed the Foreign Economic Assistance Act of 1950, which included authorization of new appropriations of \$2,700,000,000 for continuation of the European Recovery Program for the fiscal year 1951. In addition, funds previously appropriated for ERP and unobligated as of June 30, 1950 (as well as funds subsequently released from obligation), were authorized for obligation in the fiscal year 1951. Furthermore, the authorization of \$150,000,000 for guaranties, contained in the 1949 legislation, was increased to \$200,000,000.

¹ ECA allotments exclude GARIOA funds.

For the fiscal year 1950, the Congress authorized \$150,000,000 for the purpose of extending loans to participating countries, a reduction from the 1 billion dollars of funds set aside for loan or guaranty authority for the fiscal year 1949. As of March 31, 1950, the Council had approved proposals by the Administrator for Economic Cooperation for allocations of new loans in the amount of approximately \$106,000,000 for the fiscal year 1950, and it was anticipated that the Administrator would shortly propose another allocation of the residual amount of the \$150,000,000 authorized for loans, amounting to about \$44,000,000.

European Payments Union

During February 1950, the ECA outlined to the Congress certain details with respect to the proposed European Payments Union. The major objectives of the proposed Union, which is intended to replace the existing Intra-European Payments Plan, were stated by ECA as follows:

"The replacement of bilateral by multilateral trade would be accomplished through a clearing system which would permit each member to offset a deficit against any one member with a surplus against any other. Countries would not have to settle each deficit bilaterally with each other but would settle only their multilateral deficit with the Union, which would generally be smaller than the sum of their bilateral deficits. To discourage excessive multilateral surpluses and deficits, the Union would require creditors to settle part of their surpluses with long-term loans to the Union, and debtors to

Note.—See appendix C, table XXV, for data on intra-European aid and net aid received by or provided to participating countries.

Source: Economic Cooperation Administration.

settle part of their deficits with the Union in gold or dollars. Furthermore, a Board of Governors would have authority to adjust the working of these settlements arrangements and to use other means to induce countries to maintain a reasonable balance with the Union as a whole." ⁵

In its review of the proposal, the Council considered that, in the establishment of the proposed Union, its operations should not conflict with obligations undertaken by the United States and other member governments to the International Monetary Fund and that the establishment of the Union on the regional basis proposed should not prevent any one participating country or group of participating countries from moving as rapidly as possible toward currency convertibility and economic integration independently of the rate of progress of other members of the proposed Union.

Local currency accounts

As outlined in previous Reports of the Council, participating countries receiving assistance in the form of grants from ECA are required to deposit their own currencies in special accounts in amounts commensurate with the dollar costs of the grant aid received. There is no obligation to deposit local currency counterpart where countries receive assistance in the form of loans. Where assistance has taken the form of conditional aid, the country receiving ECA dollars has placed at the disposal of other participants its currency in the form of drawing rights. The country receiving the drawing rights has made a commensurate deposit in a special local currency account.

Recipient countries make deposits in the special local currency accounts after notification by ECA, using conversion rates which are either the par values agreed to by the International Monetary Fund, or, where the country has no par value, a rate mutually agreed upon

by ECA and the participating country.

During the six-month period ending March 31, 1950, the Council reviewed requests for the release of counterpart funds in Austria, Belgium, western Germany, France, Italy, the Netherlands, and Norway. The Council had previously reviewed releases for all of these countries except Belgium and western Germany. Table VIII shows, as of March 31, 1950, the status of counterpart funds under the Foreign Assistance Act of 1948 (as amended).

95 percent counterpart

The purposes for which 95 percent counterpart funds have been

used may be summarized briefly as follows:

A. For monetary and financial stability.—In the United Kingdom and Norway, counterpart releases have been made supporting the financial stabilization programs of those countries. Counterpart funds were released to cancel government obligations to the central bank, which cancellation resulted in a desirable reduction in the volume of circulating media in those countries. Furthermore, where releases were made to finance investment programs, consideration was given to the impact of such releases on the achievement and maintenance of monetary and financial stability, and the releases were frequently made in connection with the taking by the partici-

[•] ECA Budget Estimate July 1, 1950-June 30, 1951, pt. II, pp. 13 and 14.

pating countries concerned of measures designed to further financial stability.

B. For capital investment and promotion of production.—In France, counterpart funds were used to finance investments in important areas of the French economy, including the coal, steel, transportation, electric power, and manufacturing industries, and in agriculture. In western Germany, capital investment loans were made out of counterpart funds to finance power developments, coal mines, agricultural rehabilitation and development, and a wide variety of industries, especially dollar-saving and dollar-earning industries. In Austria, releases were made for capital investments in essential industries and agriculture. In Italy, counterpart funds were used to promote agricultural development, for rehabilitation of the railroad system, and for other essential investments. In Trieste, counterpart was used to make loans for shipbuilding, Trieste's chief industry, and for other industrial and commercial purposes. In Greece, counterpart funds were utilized for the rehabilitation of agriculture, transportation, other utilities, and essential industrial plants. In the Netherlands, the greater part of counterpart funds released was for land reclamation, agricultural research and development, waterways and harbors, etc. The Council concurred in the release of counterpart funds in Belgium to finance

Table VIII.—Status of European local currency counterpart fund accounts under Public Law 472 (80th Cong., 2d sess.), as of Mar. 31, 1950

research and technical developments in industry and agriculture.6

¹ Local currency is deposited in the special counterpart accounts at the agreed upon rates in effect at the time dollar funds were actually expended by ECA. Withdrawals of part of these local currency funds were made, however, at times when the conversion rates were different from those in effect at the time of deposit. The adjusted dollar equivalent of deposits represents the sum of withdrawals (calculated at the conversion rates in effect at the time of withdrawal) plus balances on hand (calculated at the current conversion rate). Includes Indonesia.

³ Less than \$50,000.

Source: Economic Cooperation Administration.

The release of counterpart funds in Belgium occurred after the close of the period under review.

C. For other purposes.—Counterpart funds were released in various countries to finance essential industrial housing, tourist facilities, the transportation of relief packages and, in Greece, for the care and rehabilitation of refugees from the guerrilla warfare.

5 percent counterpart

Not less than 5 percent of local currency deposits is reserved for United States use in the recipient country and is placed in a separate account under the control of United States disbursing officers. funds are used for ECA administrative expenses, or for the purchase or development of the production of strategic materials which are in short supply in the United States. Funds not required by ECA are transferred to the United States Treasury for use by other United States Government agencies. In order to be so used, these agencies must, in effect, purchase such funds from the Treasury with their appropriated dollars.

ECA guaranty program

In the 2 years of ECA operations ending on March 31, 1950, 17 guaranty contracts, with a total value of \$6,130,127, were issued in connection with new industrial investments by United States investors in ERP countries. In addition, the total of informational media guaranties signed since the inception of the program amounted to \$3,053,838.

As of March 31, 1950, there were under consideration 29 applications for industrial investment guaranties amounting to \$32,250,876; 4 applications for guaranties of contracts for the furnishing of capital goods items and related services (forward contracting guaranties), totaling \$4,550,000; and 63 applications for informational media

guaranties valued at \$10,254,510.

Through March 31, 1950, fees collected for the issuance of informational media guaranties amounted to about \$37,000. Dollar disbursements made pursuant to applications for the conversion of foreign currencies under such guaranties totaled some \$567,500. With respect to industrial guaranties, fees collected amounted to about

\$59,000, but no dollar disbursements were made.

As indicated in the previous Report of the Council, the Economic Cooperation Act of 1948 was amended and liberalized in 1949 to allow United States firms securing guaranties for new industrial and commercial investments in participating countries to convert receipts into dollars during the life of the guaranty up to 100 percent of the dollars invested plus actual earnings or profits derived from the projects represented by such investments to the extent provided in the contract of guaranty. ECA determined that the aggregate amount to be covered under a guaranty of an industrial project should not at any time exceed 175 percent of the value of the cash or tangible property invested, plus additional amounts based upon techniques and processes contributed by the applicant. During the first 5 years of individual guaranty contracts, investors were limited in the amount of receipts that they could convert under the guaranty, but beginning in the 6th year each investor in industrial and commercial enterprises may convert at any time up to the full amount of the coverage provided by each guaranty contract. The effective life of the guaranties may

extend until April 3, 1962. No provision was made under the guaranty legislation of 1948 or 1949 against ordinary business or political risks or against fluctuations in rates of foreign exchange. Guaranties of investments in enterprises producing or distributing informational media were reduced under the act as amended in 1949 from a limit of \$15,000,000 to a limit of \$10,000,000 in any fiscal year.

ECA experience during the first year of the recovery program indicated that the investment guaranty provision had interested primarily companies doing a considerable volume of European business in relatively specialized products either through plants already established abroad or by export sales. These guaranties were approved by the ECA and the participating governments concerned on the basis of their contribution to the recovery effort. In most cases, it was anticipated that not only would the domestic market of the recipient country be served by the guaranty, thus reducing the need for dollar imports, but that some of the output would also be sold to other countries. Informational media guaranties have been written for newspapers, magazines, and other periodicals in such a manner that the amounts payable by ECA to publishers or distributors will not exceed the estimated dollar costs incurred. These guaranties involved new investments for the purpose of obtaining increased circulation and are issued generally for a period of six months with the privilege of renewal upon expiration.

ECONOMIC ASSISTANCE FOR ASIA

China

Under the Foreign Assistance Act of 1948, an appropriation of \$275,000,000 was made available for economic aid to China until April 3, 1949. In early 1949, when it became evident that the civil war on the Chinese mainland had severely restricted the area of effective United States aid, the program of assistance was reduced in As of April 3, 1949, the unobligated balance of funds from this appropriation amounted to \$54,000,000. These funds, and any funds thereafter released from obligation, were made available for expenditure through February 15, 1950, by Public Law 47 (81st Cong., 1st sess.).

Subsequently, as a result of further developments in China, the program was progressively curtailed. Certain funds were released from obligation and on December 31, 1949, there was left an unobligated portion of \$90,800,000 from the original appropriation, plus further estimated releases from obligation of \$14,000,000. Under Public Law 447 (81st Cong., 2d sess.), the Congress extended from February 15 to June 30, 1950, the authority of the President to obligate funds previously appropriated under Public Law 47 (81st. Cong., 1st sess.) for assistance to certain areas of China.8

⁷ Under the Foreign Economic Assistance Act of 1950, which amends the Economic Cooperation Act of 1948 as amended, considerable changes were made in the guaranty coverage formerly provided. Among other things this amendment enlarges the definition of investments which may qualify for guaranties to include those of an intangible (i. e., patents, processes, and techniques) as well as tangible nature. Also, in addition to the risk of nonconvertibility of foreign currencies, ECA may guarantee against the risk of loss due to expropriation or confiscation by action of a government of a participating country. Finally, as indicated previously, Congress gave ECA authority to issue up to \$200,000,000 in guaranties, an increase of \$50,000,000 over the amount previously available.

8 Under the China Area Aid Act of 1950 (Title II of the Foreign Economic Assistance Act of 1950), unobligated funds or those to be released from obligation under the 1949 appropriation were made available through June 30, 1951, to further the general objectives of the China Aid Act of 1948.

Japan

During January 1950, the Council reviewed a request for appropriations, prepared by the Department of the Army, for economic aid to Japan during the fiscal year 1951. The Council had occasion previously to review the Department of the Army's appropriation request for the economic rehabilitation of Japan for the fiscal year 1950. At that time, the Council believed that certain steps should be taken in Japan to bring about economic stabilization. Council consideration of the Japanese financial situation was followed by a directive of the Supreme Commander Allied Powers (SCAP) to the Japanese Government on economic stabilization and by a Mission to Japan to advise and assist SCAP in the implementation of the directive. A single exchange rate for the Japanese yen was established during April 1949. The directive and the work of the Mission have resulted in progress in the economic stabilization of Japan and in assisting the country in its efforts toward attaining a self-supporting economy.

The appropriation request for economic aid to Japan for the fiscal

year 1951 was subsequently presented to the Congress.

Korea

During February 1950, under the Far Eastern Economic Assistance Act of 1950 (Public Law 447, 81st Cong., 2d sess.) the Congress authorized \$60,000,000 of aid to Korea for the fiscal year ending June 30, 1950, in addition to the sums already appropriated. The Reconstruction Finance Corporation was authorized to make advances not to exceed \$30,000,000 to carry out this provision. Korea had previously received \$60,000,000 in aid to cover part of its requirements for the fiscal year 1950.

EXPORT-IMPORT BANK CREDITS

During the period under review, the Council continued to work closely with the Export-Import Bank to facilitate coordination of the Bank's operations with those of other agencies concerned with foreign financial and monetary matters. New credits authorized by the Bank during this period totaled \$216,642,859.

Afghan istan

Application by Afghanistan to the Export-Import Bank for credits to assist in financing the dollar costs of equipment, materials, and services required for the construction of dam, river development, and irrigation projects, was referred to the Council. Development work, previously undertaken by an American engineering firm and financed by Afghanistan's foreign-exchange receipts, had resulted in the construction of a dam and an all-weather road. Completion of the irrigation works to be financed in part by the proposed credit will provide for an increased food supply and permit the resumption of other types of agricultural production. It should also improve the country's international financial position. After consultation with the Council,

In June 1950, sec. 3 (d) of the Far Eastern Economic Assistance Act of 1950 was amended to authorize \$100,000,000 of assistance for Korea for the fiscal year ending June 30, 1951 (Public Law 535, 81st Cong., 2d sess.).

the Bank on November 25, 1949, announced authorization of credits to Afghanistan not to exceed \$21,000,000.

Bolivia

In 1944, after recommendation by a United States economic mission. construction was started on the Cochabamba-Santa Cruz highway in At that time, the Export-Import Bank extended a credit of \$15,500,000 to the Bolivian Government of which \$10,000,000, along with funds supplied from Bolivian sources, was to be used to finance highway construction. This highway is designed to provide a transportation link between the centers of population and agricultural areas in Bolivia, and make possible the development of the Santa Cruz area as a source of supply for food and other agricultural products, which are now largely imported. The development will also contribute to an improvement of Bolivia's international payments position and serve to relieve its extreme dependence on the production and export of tin. The Council approved consideration by the Bank of an additional credit to Bolivia and on November 1, 1949, the Bank announced that it had authorized a credit to the Bolivian Government not to exceed \$16,000,000 to finance two-thirds of the costs of completing the Cochabamba-Santa Cruz highway. Advances under the credit will be repaid over a period of 16½ years beginning on March 31, 1954, and ending on September 30, 1970, at a rate of interest of 3½ percent per annum.

Chile

Application to the Bank by the Corporacion de Fomento de la Produccion of Chile for funds to assist in the development of iron ore deposits near Coquimbo, Chile, was referred to the Council during October 1949. Under this proposal, credits will be made available for purchase in the United States of railroad, dock, and construction equipment representing one-third of the total estimated financing costs of \$8,250,000. The remainder of the funds will be supplied by the Bethlehem Steel Co. and will help finance the construction of port works and ore handling facilities, and the rehabilitation of railway facilities. The purpose of this new credit is to assure a supply of ore for the steel plant located near Concepcion, Chile, which was financed in part by a \$48,000,000 Export-Import Bank credit, and to provide an additional source of dollar revenue to Chile from the export of iron ore to the United States. The Bank, after consulting the Council, announced on October 28, 1949, authorization of a credit of \$2,750,000 to the Corporacion de Fomento to be repaid over a period of 15 years at 4 percent, repayment to be guaranteed by the Republic of Chile.

As indicated in its previous *Report*, the Council had earlier approved consideration by the Export-Import Bank of a credit to Chile not to exceed \$25,000,000 to assist in the financing of its import program for the remainder of 1949. The authorization of this credit was

announced by the Bank on October 7, 1949.

Ecuador

In order to assist in the reconstruction of property damaged by the earthquake of August 5, 1949, Ecuador applied to the Export-Import Bank for credits to finance the cost of the repair and reconstruction

907795-51-25

of roads, the financing of railroad equipment, and for specific projects directed toward restoration of the earthquake-affected area. All of the projects undertaken as a result of this financing will be directed toward meeting Ecuador's long-range reconstruction and development needs. Domestic costs of reconstruction will continue to be provided by internal financing on the part of Ecuador. The Council approved consideration by the Bank of a credit to Ecuador of \$7,000,000, payable over a period of 20 years, with interest at 3½ percent per year, and the Bank announced authorization of this credit on December 21, 1949.

Indonesia

During February 1950, the Bank consulted with the Council on an application by the Republic of the United States of Indonesia for credits to assist in financing the import from the United States of capital goods urgently required for reconstruction of the Indonesian Vital equipment and materials for agricultural production and processing are necessary in order to restore Indonesia to her prewar level as a major source of certain products, such as rubber, tin, palm oil and coconut products, sisal, tea, kapok, and other essential commodities. On February 11, 1950, the Bank announced the authorization of the establishment of credits to Indonesia up to \$100,000,000 at an interest rate of 3½ percent per annum repayable over a period of 20 years, with principal payments beginning after 5 years.

Saudi Arabia

During October 1949, the Bank referred to the Council an application of the Al Haza Cement Co., a subsidiary of Saudi Arabian Industries Corp., for the construction of a cement plant. After consultation with the Council, the Export-Import Bank on November 9, 1949, authorized a credit of \$4,000,000 to this company under guaranty of the Saudi Arabian Government. The loan will mature in 10 years and bear 4 percent interest.

Yugoslavia

Early in 1950, the Export-Import Bank consulted the Council on the application by Yugoslavia for additional credits to provide essential imports, including those necessary to maintain and improve the transport system, particularly in those branches related to Yugoslav exports. On March 2, 1950, the Bank announced that \$20,000,000 would be available to Yugoslavia until March 30, 1951, to bear interest at 3\% percent per annum, and to be amortized over a period of 7 years, beginning on January 1, 1954.

Other Export-Import Bank credits

In October 1949, a credit of \$3,806,200 was established to assist in financing the sale by Higgins, Inc., shipbuilders, of coastal cargo vessels and harbor ferries to Brazil. In November 1949, the Bank joined with the International General Electric Co. in financing the dollar costs of expanding the electric power generating and distributing equipment of the Compania Anonima de la Electricidad de Caracas. enezuela. The Bank's credit for this purpose is \$5,158,000. The Export-Import Bank also acted, on behalf of ECA, as admin-

istering agency for the supplementary loan agreements with par-

ticipating ERP countries, signed during the period under review. The terms and conditions of these loans, determined by ECA after consultation with the Council, include an interest rate of 2½ percent per annum payable semiannually from 1952, and principal payments beginning in 1956. The loans mature in 1983. Minor changes were made in the amounts covered by the loan agreements with the Netherlands (for Indonesia), Ireland, Sweden, and the United Kingdom.

As of March 31, 1950, the resources of the Export-Import Bank

were distributed as follows:

[In millions of dollars]	3, 500. 0
Loans outstanding	2, 199, 8
Undisbursed commitments	
Uncommitted lending authority	813. 7

THE POINT IV PROGRAM AND FOREIGN INVESTMENT PROBLEMS

The general nature of the Point IV Program was discussed in the preceding semiannual Report of the Council. During the period under review, progress was made in the negotiation of treaties of friendship, commerce, and economic development, which have as one of their objectives the creation of a more favorable climate for invest-The proposals relating to United States participation ment abroad. in international technical cooperation were considered by the Congress and included in the over-all program for foreign economic assistance.10 As of the date of this Report, no further action had been taken on the bills permitting the extension of foreign investment guaranties, which had been reported on favorably by the Banking and Currency Committees of both Houses of Congress during the first session of the Eighty-first Congress.11

The communique signed on September 12, 1949, following the Tripartite discussions among representatives of the United States, the United Kingdom, and Canada, requested the President's Committee for Financing Foreign Trade to explore possible means of action in promoting overseas investment in cooperation with corresponding groups of British and Canadian financial and business representatives. 12

¹⁰ Under the Foreign Economic Assistance Act of 1950 (Public Law 535, 81st Cong., 2d sess.), the Congress authorized \$35,000,000 for United States participation in technical cooperation programs, including those earried on by the United Nations.
¹¹ During the second session of the 81st Cong., a revised House bill was reported out favorably and placed on the calendar for consideration during July 1950.
¹² On April 20, 1950, the Canadian Minister of Finance announced the establishment of an Advisory Committee on Private Overseas Investment under the chairmanship of Mr. Gordon R. Ball, general manager of the Bank of Montreal. The press announcement indicated that the Committee would probably, in the first instance, devote its attention to a study of the obstacles impeding the free flow of investment from Canada to overseas countries and of the steps that might be taken to eliminate or minimize these obstacles.

In December 1949, the Council and the President's Committee met in joint session and considered in detail the relationship of investment treaties to the development of a favorable climate for private investment, the sphere of private capital investment in relation to government capital, the formation of foreign banking committees to facilitate private foreign overseas investment, the experience of ECA in the field of technical assistance, and various aspects of the Export-Import Bank's proposed investment guaranty program for stimulating private investment.

The Council and the President's Committee both believed that a

The Council and the President's Committee both believed that a case study of private foreign investment experience in recent years might be helpful in determining appropriate incentives for private investment. The Committee agreed to undertake such a case study.

OTHER FINANCIAL PROBLEMS

Aid to Palestine refugees

In December 1949, following a report of the United Nations Economic Survey Mission to the Middle East, the Department of State referred to the Council for its consideration the financial aspects of United States participation in the United Nations program for aid to Palestine refugees. Under this plan, it was proposed that funds be made available for direct relief and works programs in Jordan, Syria, and Lebanon. Erosion control, reforestation, dam, and road construction would be the main types of work undertaken. This area is generally self-supporting and thus only a small portion of the funds would be required for food.

The United Nations Mission estimated that the total cost of the program would amount to approximately \$55,000,000 for the period January 1, 1950, to June 30, 1951. The Council advised the Department of State that it had no objection to an appropriation request of about \$27,500,000 as the United States contribution for aid to Palestine refugees during this period, and the view was expressed that such assistance might be extended on a grant basis. An appropriation request for this program was later submitted to the Congress.¹³

Philippine exchange controls

In response to a request of the Philippine Government the President, with the advice of the National Advisory Council, agreed in December 1949 to temporary measures by the Philippine Government to deal with the then existing foreign-exchange situation. The President acted in accordance with the provisions of the Executive Agreement of July 4, 1946, between the Governments of the Philippines and the United States. The Philippine Government on December 9, 1949, instituted controls over transactions in foreign exchange.

Proposed International Commodity Clearing House

During November 1949, the Council reviewed a proposal, contained in a report of the Food and Agricultural Organization of the United Nations, for the establishment of an International Commodity Clearing House. This institution was to be chartered initially for a

¹³ The Foreign Economic Assistance Act of 1950 authorized the Secretary of State to make contributions before July 1, 1951, for the "United Nations Relief and Works Agency for Palestine Refugees in the Near East," in amounts not exceeding in the aggregate \$27,450,000.

period of 5 years during which time it would engage in two types of

surplus disposal operations:

(1) Surplus commodities would be purchased at commercial prices from hard-currency countries and resold also at commercial prices to soft-currency countries. The latter would make payment in their own currencies to the Clearing House which would hold each soft currency to the account of the selling country until it became convertible or until such time as some appropriate use might be found for it by the creditor country.

(2) Surplus commodities would be purchased by the Clearing House from hard-currency countries at less than market prices and resold abroad at the reduced price for such special purposes as relief and school-lunch programs. Such purchases and sales would be made only for hard currencies and would be on account of the general fund

of the Clearing House.

The proposal contemplated that the Clearing House would have an authorized capital equivalent to 5 billion dollars, with membership quotas assessed on the basis of national income, and that subscriptions of 20 percent of this amount would be used as a revolving fund to finance the transactions involving purchases and sales for hard currencies. The remaining 80 percent of quotas would be callable

only with the consent of the countries involved.

The Council did not favor United States participation in an international organization, such as the proposed International Commodity Clearing House, which was designed to serve as a financial mechanism for the disposal of agricultural surplus commodities. The Council also held that the sale of surpluses abroad for inconvertible currencies under the proposed plan would be undesirable since it would result in further accumulation of such currencies for the account of the United States or other hard-currency countries. The accumulation of additional inconvertible currency holdings by hard-currency countries would correspondingly increase the liabilities of the deficit countries and so constitute a serious deterrent to the establishment of convertibility.

At the FAO Conference, fifth session, November 21-December 6, 1949, food-deficit as well as food-surplus countries opposed the proposal as not workable. The Conference established machinery to continue study of the problem of surplus agricultural commodities.

Financial terms for sales of foreign excess property

The Council has from time to time reviewed the financial terms for sales of foreign surplus property by the former Office of the Foreign Liquidation Commissioner, State Department. When the OFLC was abolished on June 30, 1949, the function of disposal of foreign excess property was transferred, effective as of that date, to each executive agency having such property. The Council authorized

the successor departments and agencies of OFLC operating in this field, pursuant to Public Law 152 (81st Cong., 1st sess.) to extend credit on terms similar to those contained in agreements negotiated by the OFLC, when immediate payment in United States dollars is not practicable or advantageous, and, in certain cases, to accept payment in foreign currencies.

IV. ACTIVITIES OF THE COUNCIL FROM OCTOBER 1, 1949, TO MARCH 31, 1950, RELATING TO THE INTERNATIONAL MONETARY FUND AND THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

The National Advisory Council, in accordance with statutory authority, continued to coordinate the activities of the United States Directors on the Executive Boards of the Fund and the Bank with those of other agencies of the Government, by consulting and advising with them on major problems arising in the administration of the Fund and the Bank. The United States Executive Directors of these institutions, or their Alternates, have attended the Council's meetings regularly, and have participated continuously in the work of its staff committee.

In the six-month period under review, the Council gave consideration to various policy questions relating to the activities of both the Fund and the Bank. These questions have been discussed in the Second Special Report of the National Advisory Council on the Operations and Policies of the International Monetary Fund and the International Bank for Reconstruction and Development (H. Doc. No. 611, 81st

Cong., 2d sess.).

MEMBERSHIP CHANGES IN THE FUND AND THE BANK

In January 1950, the Boards of Governors of the Fund and the Bank, by mail and telegraph ballot, approved the membership application of Pakistan, providing for a quota in the Fund of \$100,000,000, with a like amount as a subscription to the Bank. The Council advised the United States Executive Directors on the Fund and the Bank to give favorable consideration to the application. Pakistan will have until July 31, 1950, to accept membership, although this period may be extended to January 31, 1951. During the period under review, no new countries were formally admitted to membership in either the Fund or the Bank.

On March 15, 1950, the Fund and Bank announced the withdrawal of Poland from the two organizations. As of March 31, 1950, 47 countries were officially listed as members of the Fund and of the Bank. These countries, with their quotas and capital subscriptions

on that date, are listed in appendix D.

ORGANIZATIONAL CHANGES

On January 17, 1950, the President of the United States, with the advice and consent of the United States Senate, made three appointments affecting United States representation on the Fund and on the Bank. Mr. James E. Webb, Under Secretary of State, was appointed to serve also as United States Alternate Governor of the Fund and of the Bank; Mr. William McChesney Martin, Jr., Assistant Secretary of the Treasury, was appointed to serve also as United States Executive Director of the Bank; and Mr. John S. Hooker, United States Alternate Executive Director of the Bank, was reappointed to that position, concurrently assuming the duties of United States Alternate Executive Director of the Fund. Each of these three appointments became effective on January 18, 1950. Mr. Webb replaced Mr. William L. Clayton, whose resignation had become effective on August 27, 1949. Mr. Martin's appointment was to the position formerly held by Mr. Eugene R. Black, who assumed the Presidency of the Bank on July 1, 1949. As United States Alternate Executive Director of the Fund, Mr. Hooker replaced Mr. Henry J. Tasca, whose resignation became effective December 22, 1949.

THE FUND

During the six months ending March 31, 1950, the Fund sold 48,800,000 United States dollars to four of its member countries for an equivalent amount in local currencies. These transactions increased the total of Fund currency sales to an equivalent of \$783,385,000 from May 8, 1947 (the date of the Fund's initial sale), to March 31, 1950. Repurchases by member countries of their currencies aggregated nearly \$21,900,000 in the six-month period under review.

Par values and exchange rates

The six months from October 1, 1949, to March 31, 1950, witnessed an adjustment by many nations throughout the world of their currency values, principally as a consequence of the devaluations that occurred in September 1949. Some of these adjustments constituted formal changes in par values (Iceland, British Honduras), while most of them consisted of changes in existing multiple exchange rate structures. Included in this latter category are Austria, Bolivia, Chile, Costa Rica, Ecuador, Nicaragua, Paraguay, and Uruguay, all of which are members of the Fund; as well as Argentina and Spain, which are nonmembers. On November 15, 1949, Peru suspended the par value of the sol,

permitting the exchange rate to be determined in an exchange certificate market. Details of the currency adjustments made by the various countries listed above may be found in chapter II of the Council's Second Special Report.

Exchange transactions

The Fund's largest currency sale in the period under review occurred in November 1949, when Brazil purchased 22,500,000 United States dollars for cruzeiros. This transaction represented Brazil's second drawing on the Fund. In October 1949, Australia made its initial drawing on the Fund through a purchase of \$20,000,000 for Australian pounds. During that same month, Yugoslavia bought \$6,000,000 in exchange for dinars, and Ethiopia purchased \$300,000 for Ethiopian dollars. Each of the latter two transactions represented a second drawing by the respective governments.

The United States Executive Director on the Fund, after consulta-

tion with the Council, concurred in these transactions.

CHART D

Chart D and table X present—by semiannual periods—all currency sales made by the Fund from its inception to March 31, 1950. Data for the chart have been cumulated from figures in table X to show the distribution of exchange and gold transactions at the termination of each given semiannual 14 period:

Note.—Except where otherwise indicated, all cales were of United States dollars in exchange for the currency of the purchasing country. Repurchases by members of their own currencies totaled about \$24,209,000 as of Mar. 31, 1950. Such repurchases have not been deducted from data in this table.

Source: International Monetary Fund.

Repurchase of Fund drawings

During the period covered by this report, two countries-Costa Rica and Belgium—repurchased portions of their currencies from the In November 1949, Costa Rica repurchased the equivalent of \$1,250,000 of its own currency held by the Fund, thereby offsetting dollar drawings in the same amount made in the last quarter of 1948. This is the second repurchase transaction by Costa Rica, the earlier transaction, in the amount of \$874,000, having been effected in May 1949.

¹ No currency sales were made by the Fund between Dec. 31, 1949, and Mar. 31, 1950.
2 Includes \$6,045,000 of pounds sterling.
3 Includes \$6,845,029 of Belgian francs.
4 As presented in chart D.
4 Includes \$2,286,676 of Belgian francs.
5 Consists of \$6,126,788 in United States dollars sold for an equivalent in gold, and \$2,281,676 of Belgian

[&]quot;Semiannual calendar periods have been used to afford comparability between time periods with both balance-of-payments data, appearing on chart A, and statistics of United States Government foreign aid shown in appendix C.

On January 23, 1950, Belgium repurchased approximately 1 billion Belgian francs from the Fund, by payment of \$12,090,283 in United States dollars and the equivalent of \$8,548,923 in gold. An earlier repurchase of Belgian francs in the amount of \$946,500 occurred in August 1949. As a result of these two transactions, the Fund's holdings of Belgian francs were reduced to the level preceding Belgium's initial purchase of dollars from the Fund in December 1947.

THE BANK

During the period under review, the International Bank granted \$17,545,000 in new loans to three of its member countries. These loans increased the total of the Bank's outstanding commitments to \$737,707,000 as of March 31, 1950. During the period, the Bank concurred in requests for the cancellation of portions of loans previously granted to two of its member countries. These cancellations totaled \$6,438,000.

New loan commitments

On October 17, 1949, the Bank granted two loans totaling \$5,000,000 to the Republic of Finland and to the Federal People's Republic of Yugoslavia for the development of the timber resources of those countries. The loan to Finland was in the amount of \$2,300,000,

while the loan to Yugoslavia amounted to \$2,700,000.

Both loans are for terms of 2 years and carry interest rates of 2 percent, plus the usual 1 percent commission for the Bank's special reserve. In addition, a commitment charge of 1½ percent will apply to the undisbursed portion of the loans. Amortization payments, beginning on June 30, 1950, are calculated to retire the loans at maturity. The loan to Finland became effective on December 16, 1949, and the loan to Yugoslavia on January 24, 1950, after certain

conditions had been fulfilled.

On December 14, 1949, the Bank announced that it was prepared to extend a loan of \$12,545,000 to the Rio Lempa Hydroelectric Commission, an agency of the Government of El Salvador, for the purpose of financing imports for the development of electric power resources. This loan, the first to be made by the Bank in the Central American area, is to be guaranteed by the Government of El The loan is to be for a term of 25 years and to carry an interest rate of 31/4 percent, in addition to a commission charge of 1 percent for the Bank's special reserve. Amortization payments, to begin on July 15, 1954, are calculated to effect retirement by maturity. In addition to the foreign-exchange costs which the International Bank expects to finance, the power development project would require an expenditure of an equivalent of about \$5,000,000 in Salvadorean colones. These local currency costs would be financed by the public sale in El Salvador of bonds denominated in colones, to be issued by the Commission. To become effective, the loan agreement must be ratified by an elected Constituent or Legislative Assembly in El Salvador. As of March 31, 1950, such action had not vet been taken.

The Council was consulted by the United States Executive Director or his Alternate with respect to each of the above loan applications.

Table XI and chart E present—by semiannual periods—loan commitments (net of cancellations) made by the International Bank from its inception to March 31, 1950. Data for the chart have been cumulated from figures in table XI to show the distribution of outstanding loans at the termination of any given semiannual 15 period:

⁸ As presented in chart E. ⁴ Agreement becomes effective after the Bank has received certain certificates and documents, and has notified the borrower and guarantor of its acceptance of such evidence.

⁵ After cancellation of \$238,017, effective Dec. 19, 1949.

¹⁸ Semiannual calendar periods have been used to afford comparability between time periods with both balance-of-payments data, appearing on chart A, and statistics of United States Government foreign aid shown in appendix C.

CHART E

Loan cancellations

The Bank's first loan cancellations occurred during the six months under review, and consisted of a reduction of \$6,200,000 in the principal amount of \$15,000,000 originally made available to the Herstelbank on July 26, 1949, and a \$238,017 reduction in the \$12,000,000 commitment made by the Bank to Luxembourg on August 28, 1947.

Bank financing

In June 1949, the Congress enacted legislation classifying securities issued or guaranteed by the International Bank as exempted securities under the Securities Exchange Act of 1934, as amended. The Council supported this legislation. Subsequently, the Federal Reserve Board stated that, as a result of this enactment, International Bank securities should be classified as exempted securities under section 2 (e) of regulation T, thus placing such securities in the same category under the regulation as United States Government, State and municipal bonds. On October 24, 1949, following the Board's ruling, the New York Stock Exchange announced greatly reduced margin requirements for transactions in International Bank bonds.

On January 25, 1950, the Bank, with the consent of the Council, sold in the United States market an issue of \$100,000,000 of 2 percent serial bonds, scheduled to mature in equal amounts annually between 1953 and 1962. These securities were issued to retire a like amount of outstanding 10-year 2½ percent bonds due July 15, 1957. On March 6, 1950, the Bank announced the sale of an equivalent of approximately \$6,600,000 in 2½ percent Swiss franc bonds to a group

of leading banks in Switzerland. Additional information concerning each of these transactions may be found in the Council's Second Special Report.

Future operations

As of March 31, 1950, the Bank had in excess of \$320,000,000 in uncommitted dollar funds available for lending, and was_actively engaged in the processing of numerous loan applications. The Bank may also be expected to continue, through its economic missions, to assist countries in making general surveys of development potentialities and to recommend measures to facilitate their realization.

Appendix C

STATISTICAL TABLES ON UNITED STATES GOVERNMENT POSTWAR FOREIGN LOANS AND OTHER CREDITS, AND GRANTS

EXPLANATORY NOTE

The data in this appendix relate to loans and other credits and to grants provided by the United States Government to foreign governments and other entities from July 1, 1945, through December 31, 1949. Because there were some credits and grants of a peacetime character between July 1, 1945, and VJ-day, and data for this period are readily available only on a semiannual basis, for statistical purposes an initial date of July 1, 1945 (except for postwar lend-lease data, which have a beginning date of September 2, 1945), has been adopted for the postwar period.

The statistical tables presented in this appendix and this Explanatory Note were prepared by the Clearing Office for Foreign Transactions, Office of Business Economics, Department of Commerce, in consultation with the International Statistics Division, Office of International Finance, Treasury Department, on the basis of the latest information available from Government agencies reporting to

the Clearing Office.

Items which are necessarily based on estimates, particularly lend-lease grants and some lend-lease and surplus-property credits, have been adjusted or qualified on the basis of information received to the date of preparation of these tables, but in some instances are subject to future adjustments.

Foreign aid (grants and credits) in some cases has been extended subject to future settlement which may or may not ultimately result in repayment.

The following credits are excluded from the tables: short-term credits (less than 6 months for credits of the former Office of the Foreign Liquidation Commissioner and War Assets Administration; 90 days or less for all other agencies), the revolving special exporter-importer credits of the Export-Import Bank, and

advance payments on commodity-procurement contracts.

Also excluded are several operations of the United States Government abroad which are sometimes called grants. Among these excluded transactions are (1) the waiver to France of vessels intended as reparations to the United States (1) the waiver to France of vessels intended as reparations to the Onited States from Germany; (2) the return of reparation vessels to Italy; (3) certain of the naval vessels transferred to China under Public Law 512 of the Seventy-ninth Congress; (4) costs of military occupation and government in former enemy countries, other than supplies for civilian economies; (5) payments to the joint commission fighting foot-and-mouth disease in Mexico; (6) payments abroad of pensions, annuities, dependency allotments, and certain claims; (7) services supplied by the Factorial Congression Administration and paid for out of the 5 plied by the Economic Cooperation Administration and paid for out of the 5 percent counterpart funds received under the Foreign Assistance Act of 1948, as amended; and (8) relatively minor amounts of assistance under international and educational activities of the United States Government.

It should be noted that grants to the United States by foreign countries, such

as the receipt of the 5 percent of counterpart funds under economic-cooperation programs, the receipt of reparations, and reciprocal aid in the form of reverse lend-lease, have not been netted against the grant utilization shown in the ap-

pendix tables.

No attempt has been made in the appendix tables to show United States Government aid rendered through the International Bank for Reconstruction and Development or the International Monetary Fund. During 1946 and 1947 the United States Government invested \$635,000,000 in the capital of the Bank and \$2,750,000,000 in the Fund. The United States Government has a larger equity investment in the capital of these two institutions (38 and 39 percent, respectively) than any other government. For data on the transactions of these two international organizations, see chapter IV of the text of this report.

TRANSACTIONS COVERED

The following types of United States Government transactions are included in this appendix:

Credits.—These include:

(a) Loans.—These represent cash loans (except for the major part of loans extended by the Economic Cooperation Administration) to foreign governments, EXHIBITS 385

and to private entities in foreign countries, which result in debtor-creditor relationships, anticipating repayments of principal and usually payments of interest. Direct loans by the Export-Import Bank and other Government agencies, and disbursements of agent banks on loans of the Export-Import Bank are included. In the case of the Economic Cooperation Administration, loans generally represent both the goods and funds furnished to European Recovery Program participants on a credit basis.

Loans of the Economic Cooperation Administration originate in commitments made by the Administrator but most of the loans are made by the Export-Import Bank as agent for the Economic Cooperation Administration. Intermediate-term loans in connection with deficiency-material projects are made directly by the Economic Cooperation Administration. These are made from either appropriated dollar funds or 5 percent counterpart funds, whereas the loans through the

Export-Import Bank are made from public-debt dollar funds.

Loans of the Export-Import Bank originate in commitments or authorizations resulting from approval of loans by the Board of Directors. These included, as of December 31, 1949, certain loans which had not been formalized by executed contracts or agreements. These authorizations, included in the appendix tables, are as follows:

Total, All Areas	\$176, 746, 959
ERP Countries:	
Turkey	116, 854
Unallocated European cotton credits	38, 443, 733
Latin America:	, ,
Bolivia	16, 000, 000
Brazil	4, 992, 544
Chile	28, 950, 000
Ecuador	7, 000, 000
Mexico	
Venezuela	5, 158, 000
Unallocated Latin America	19, 604, 703
Asia:	, , ,
Afghanistan	21, 000, 000
Israel	26, 650, 000
Philippines	
Saudi Arabia	4, 000, 000
~~~~	2, 000, 000

(b) Property credits.—These represent credits extended abroad in the disposal of surplus property, including merchant ships, and in the settlement for lend-lease articles and services. These extensions of credit result in debtor-creditor relationships, anticipating payments of principal and, in most cases, of interest.

In analyzing surplus-property and lend-lease credits, consideration should be given to the Special Notes on Property Credits which appear subsequently in this

Explanatory Note.

Certain property-credit settlements and agreements provide for undertakings by the foreign government, other than in the form of payment of United States dollars, which, when completed will constitute a discharge of the whole or a part of its obligation to the United States Government. Collections shown in the tables do not include the undertakings of foreign governments, except to the extent that they have been reported as completed. Provisions governing the collection of principal and interest vary, and may call for payment in the form of different combinations of United States dollars, property or improvements to property, and foreign currencies.

Foreign obligations to repay lend-lease silver are included in property credits because such silver is required to be returned to the Treasury, ounce for ounce, within 5, or in some cases 7, years after the end of World War II, as determined by the President. To date, only Belgium has returned lend-leased silver.

Commodity programs are included with property credits in the appendix tables and represent credits resulting from commodity shipments by the United States Government to the military governments for western Germany and Japan. The major commodity advanced to Germany and the only commodity advanced to Japan under these programs has been raw cotton.

2. Grants.—These represent aid to foreign governments or other entities for which no repayment is expected, or for which repayment terms are currently indeterminate. Grants are not synonymous with gifts since they include, in addition to outright gifts, foreign aid extended under indeterminate terms and

conditions of recovery to the United States, pending future settlement. These settlements may eventually stipulate repayment, in whole or in part, for what is currently classified as a grant. When terms are established, the aid may be transferred from a grant basis to a credit basis. This has been done in the case

of many lend-lease settlements.

Supplies and services furnished to foreign governments or other entities include all costs, actual or estimated, chargeable to the United States Government. Services include the charges for administering the program where they can be ascertained. However, administrative expenses of the Economic Cooperation Administration paid from 5-percent counterpart funds are excluded from the grants tables. Grant aid utilized on an annual basis during the postwar period and available unutilized balances at December 31, 1949, are shown in table XXIV by program. Specifically, the grants included in this appendix are the following:

(a) Economic cooperation.—These represent aid provided by the Economic Cooperation Administration, on other than a credit basis, principally under title I and section 404 (a) of title IV of the Foreign Assistance Act of 1948, as amended. Title I of this act authorizes the European Recovery Program, and title IV is the authority for the Chinese assistance program. Included also, in the European Recovery Program (unutilized as of December 31, 1949), is the \$100,000,000 transferred from the Army Department government and relief in occupied areas (GARIOA) appropriation to the Economic Cooperation Administration for use in Germany. Under authority of Public Law 327, approved October 6, 1949, this type of aid to Germany, formerly administered by the Army Department and shown as civilian supplies, was transferred to the Economic Cooperation Administration. Data shown also include aid to Korea under Executive Order dated January 5, 1949, wherein the President transferred responsibility for aid in this area from the Army Department to the Economic Cooperation Administration. Technical assistance and training provided under the programs are included, as are the subsidies (including postal reductions), on freight payments for private relief shipments.

Where goods have been shipped to a dependent area, the aid has been shown as rendered to the parent country. Because of the military situation in China, ships bearing cargoes financed by ECA were diverted to other destinations, including Korea; partial adjustments have been made to correct the cumulative postwar data shown for these two countries. Complete information for applying these adjustments to the proper periods is not presently available, consequently the six-month utilization in table XVI does not reflect the final figures that will be shown for that period when the necessary phasing adjustments have been made. The amount shown as utilized for Unallocated ERP areas represents the dollar administrative expenses of the ECA; such expenses paid from U.S.-owned counter-

part funds are not included.

(b) Civilian supplies.—These represent principally supplies furnished by the United States Army for civilian use abroad to prevent disease and unrest in occupied areas; issues of supplies by the Navy Department in the Pacific Islands; and supplies financed out of lend-lease appropriations and furnished to the Army Department for Italian relief. (The tables have been adjusted to exclude these Italian relief transactions from lend-lease and include them under civilian supplies.

The amount involved is \$135,000,000 utilized in the postwar period.)

Army Department data include all reported shipments of civilian supplies plus net diversions abroad from military stocks. (It is estimated that about \$400,000,000 is omitted from the Army civilian-supply grants for the entire \$400,000,000 is omitted from the Army orthogonal transfers, and other overseas postwar period, resulting from diversions, petroleum transfers, and other overseas civilian supply operations which have not been reported. The Army has issued regulations to correct this reporting.) Also included is the value of incentive materials provided Germany and Japan, and subsidies (paid from appropriations for civilian supplies) for postal shipments of private relief pareels. Services rendered gratis to civilians are not included because of the infeasibility of segregating the cost of such services from the cost of regular military operations. Shipments have been shown by individual country, except for the United States and British zones of the immediate postwar European theater, which have been shown in the appendix tables as *Unallocated ERP* areas.

(c) Relief (other than civilian supplies).—These represent grants furnished for

relief abroad directly to recipient areas or through international or national agencies (in particular UNRRA, the International Children's Emergency Fund of the United Nations, the Intergovernmental Committee on Refugees, the InterEXHIBITS 387

national Refugee Organization, the United Nations for relief of Palestinian refugees

and the American Red Cross).

The UNRRA data cover only goods, services, and funds provided by the United States Government. Reports on United States participation in UNRRA operations were made by the State Department. Supplies provided through UNRRA were reported at the time of transfer, usually at shipside in the United States, with an adjustment to include estimated ocean-transportation charges to obtain the landed cost. In most cases, UNRRA shipments were used in the country to which they were destined. In some instances, however, goods were later transshipped and the country of destination which is reported in these tables was not the country actually utilizing the supplies. The dollar value of supplies transshipped is small relative to the total. The United States contribution to UNRRA comprised about three-fourths of that agency's resources. some countries the United States contribution was used to provide more than three-fourths of total aid to that country by UNRRA. In others, the United States contribution was considerably less than three-fourths of total UNRRA assistance. Where possible, data are shown for the country of destination of United States' contributed shipments. Of the postwar total of \$2,577,000,000 of United States', contributed UNRRA aid, \$2,212,000,000 is shown by country of destination. The cash grant paid in dollars to UNRRA of \$274,000,000 is shown against the geographical entry Unallocated International Organizations in the tables. Services, including administrative costs, unclassified shipments of UNRRA, and other undistributable charges, aggregating \$91,000,000, are shown tables. against the entry Unallocated All Areas.

Relief furnished directly to recipient areas includes the post-UNRRA program, authorized by Public Law 84, approved May 31, 1947, and the Interim-Aid Program, authorized by Public Law 389, approved December 17, 1947. ECA is responsible for terminal administration of these two programs which were originally under the State Department. Data on shipments under the post-UNRRA program after June 30, 1948 (estimated at \$5,000,000 to China), are not

available and are not included in these data.

The State Department has been responsible for the administration of contribu-tions to the International Children's Emergency Fund, the Intergovernmental Committee on Refugees, the International Refugee Organization, and the United Nations Relief and Work Agency for Palestine Refugees in the Near East. are shown in the tables as Unallocated International Organizations.

Data included for the former relief program of the American Red Cross cover only supplies provided by United States Government procuring agencies with appropriated funds. In the appendix tables, \$2,000,000 of the \$10,000,000 total American Red Cross aid, and \$5,000,000 of the total \$300,000,000 post-UNRRA relief is shown as Unallocated All Areas. These represent undistributable American Red Cross aid, and \$5,000,000 of the total \$300,000,000 post-UNRRA relief is shown as Unallocated All Areas. can Red Cross, administrative expenses of the post-UNRRA program, and reimbursements under the post-UNRRA program to American voluntary relief organizations for ocean-freight expenditures incurred in sending aid abroad. Goods, services, and funds provided by private persons or organizations, even though furnished through Government-approved organizations, are excluded from these data.

(d) Lend-lease.—Figures for lend-lease aid represent the estimated value of such aid furnished on a grant basis (often referred to as "straight" lend-lease), during the period September 2, 1945, to June 30, 1949. Lend-lease grants are broken down by requisitioning governments and are shown only for major areas; for example, against the United Kingdom for the British Commonwealth, against France for all French areas, etc., and for the American Republics, in total, against the entry Unallocated Latin America.

Although governments of other nations provided some aid in the postwar period to the United States in the form of reverse lend-lease, such assistance received has not been offset against the assistance furnished.

(e) Other grants.—The remaining other grants include-

1. Aid through cultural and economic programs for the American Republics, representing principally programs instituted by agencies whose functions have been consolidated in the Institute of Inter-American Affairs in the State Department.

2. Financial aid to China under the laws approved in February 1942, which directed that \$500,000,000 be provided to China to assist in prosecuting the war against Japan and in stabilizing the Chinese economy. This aid was administered by the Treasury Department; approximately \$120,000,000 was disbursed in the postwar period.

3. Aid to China under section 404 (b) of Public Law 472, approved April 3, 1948, which authorized the President to provide \$125,000,000 of military aid to China.

4. Assistance to Chinese students in the United States under Public Law 327, approved October 6, 1949. This act authorized the transfer of \$4,000,000 from the Economic Cooperation Administration to the State Department for this program.

5. Aid to Greece and Turkey under Public Law 75, approved May 22, 1947, and title III of Public Law 472, approved April 3, 1948. This assistance is

administered by the State Department.

6. Aid to the Philippines under the first three titles of the Philippine Rehabilita-

tion Act of 1946.

7. Military assistance under the Mutual Defense Assistance Program, authorized under Public Law 329, approved October 6, 1949, and for which \$814,000,000 was appropriated in Public Law 430, approved October 28, 1949. Shown under Unallocated ERP areas are the appropriations of \$500,000,000 for the signatories of the North Atlantic Treaty, and \$211,000,000 for continuation of Greek-Turkish military aid. Against Unallocated Asia are shown the appropriations of \$28,000,000 for aid to Iran, Korea, and the Philippines, and of \$75,000,000 for assistance in the general area of China. The authorized transfers of property excess to the needs of the United States equivalent to \$450,000,000 is shown against Unallocated All Areas. This amount, plus the \$814,000,000 appropriated for MDAP in Public Law 430, results in an unutilized total of \$1,264,000,000 on December 31, 1949. Excluded from the data in the tables is \$500,000,000 in contract authorizations for the North Atlantic area.

#### DEFINITIONS

Because of the wide variety of transactions and differences in the accounting procedures of the various Government agencies, it is not possible to prepare simple definitions applicable to all cases, but it is believed that the classifications used are as consistent as possible.

### 1. Utilized represents for—

(a) LOANS:

1. Economic Cooperation Administration.—The amount of aid extended on a credit basis, based upon calculations by the Economic Cooperation Administration. This aid, except to Iceland, was extended originally on an indeterminate basis out of appropriated funds, and represented supplies and services in the case of United States Government procurement, and expenditures in the case of cash reimbursements to a foreign government (for procurement made by that government or its agents) or to a United States supplier or bank (for payments to suppliers) for procurement made on a letter of credit authorized by ECA. While the utilization shown does not represent either (1) disbursements out of public debt funds, as reported by the Export-Import Bank, or (2) reimbursements of advances from appropriated funds, as reported by the Economic Cooperation Administration, it is eventually incorporated into the fiscal records of both agencies by the disbursement of public debt funds and the reimbursement of appropriated funds.

2. All other agencies (including Economic Cooperation Administration deficiency-material loans).—The amounts disbursed under the terms of the

agreements.

(b) PROPERTY CREDITS:

1. Lend-lease.—The inventories of lend-lease goods in the hands of civilian agencies of recipient governments at VJ-day, and billings to foreign governments for post-VJ-day shipments under pipeline agreements; also included is the value of the silver lend-leased during the postwar period (which is to be returned in kind). The dollar value of the lend-lease silver credits is computed at 71½ cents per fine ounce, the official value at the time the silver was originally furnished to the foreign governments. In many cases the amounts due have been established in war-account settlement agreements. In the case of Liberia, utilization represents expenditures reported by the Navy Department.

2. Former Office of the Foreign Liquidation Commissioner surplus-property credits.—Deliveries in the case of both bulk-sale credit agreements and sales

389 EXHIBITS

contracts signed under other credit agreements. In the case of bulk sales to Belgium and India, utilized credits represent the current estimate of the one-half share of the United States Government in the proceeds from the resale of the surplus property by these two foreign governments.

3. Maritime Commission ship-sales_credits.—The principal amount of the

3. Maritime Commission ship-sales creaus.—The principal amount of the mortgages received from foreign purchasers of merchant ships.

4. Reconstruction Finance Corporation and former War Assets Administration surplus-property credits.—Deliveries under sales contracts. (The Reconstruction Finance Corporation credit was to Brazil.)

5. Army Department surplus-property credit.—The estimated value of

surplus property delivered to China.

6. Commodity programs for Germany (western) and Japan.—The value of the raw materials shipped, plus shipping costs, handling charges, and administrative expenses.

(c) Grants:

1. Economic Cooperation Administration.—Supplies and services in the case of United States Government procurement, and expenditures in the case of cash reimbursements to a foreign government (for procurement by that government or its agents), or to a United States supplier or bank (for payments to suppliers), for procurement made on a letter of credit authorized by ECA.

2. Other grants.—Supplies and services in the case of United States Government procurement, and expenditures in the case of cash disbursements to

foreign countries.

2. Unutilized represents for— (a) LOANS AND OTHER CREDITS:

The difference between net agency authorizations (cumulative gross authorizations less cumulative expirations and cancellations), and the amount utilized.

In addition, there is included, as unallocated on a country basis, for the—

1. Economic Cooperation Administration.—The uncommitted authority to extend aid on a credit basis from public debt funds to the ERP participating countries, which is the difference between the statutory credit authority

(financed by public debt funds), and the net credit commitments of ECA.

2. Export-Import Bank.—The uncommitted lending authority, i. e., the difference between the statutory lending authority of the Bank, and the sum of the outstanding indebtedness to the Bank and to agent banks plus the

unutilized authorizations of the Bank.

3. Army Department.—The uncommitted commodity-program 3. Army Department.—The uncommitted commodity-program credit authority, which is the difference between the statutory credit authority, and the sum of the outstanding indebtedness to the Army plus the unutilized commitments of the Army under this program. (b) Grants:

1. Civilian supplies.—An estimate based on the unexpended appropriation programed for this purpose.

2. Institute of Inter-American Affairs.—The difference between the amount of aid specified in signed agreements with the countries involved and the

amount utilized.

3. Mutual Defense Assistance Program.—The difference between the value of the excess property authorized for transfer and the amount transferred (utilized), plus the difference between the appropriation and the amount utilized. As of December 31, 1949, there had been no recorded utilization under this program.

4. Other active programs.—The difference between the appropriation and the amount utilized. In those instances where programs have been obviously completed, although the recorded grants utilized are short of the final total,

the computed unutilized amount has been adjusted to zero.

- 3. Outstanding indebtedness represents the net of credits utilized less repayents. The data necessarily include the results of transactions taking place before July 1, 1945. Indebtedness arising out of World War I, however, is excluded.
- 4. Authorized represents the gross credit commitments, as well as any increase in prior commitments. Commitments represent all loans and other credits approved by Government agencies even though in some instances such arrangements had not been formalized by signed credit agreements. Because the lack of formal agreement may become important in some cases, the amounts in this category as of December 31, 1949, included in table XIX, are tabulated under Trans-

actions Covered in this Explanatory Note. Included also in authorized, as unallocated on a country basis, are the net increases between July 1, 1945, and December 31, 1949, in (1) the uncommitted authority of the Economic Cooperation Administration to extend aid on a credit basis from public debt funds, (2) the uncommitted lending authority of the Export-Import Bank, and (3) the uncommitted commodity-program credit authority of the Army Department.

- 5. Expired and canceled represents all expirations and cancellations of credit authorizations or commitments occurring during the period from July 1, 1945, through December 31, 1949, regardless of whether the loan or other credit was authorized prior or subsequent to July 1, 1945.
- 6. Repaid represents payments on principal only, including repayments on loans and other credits utilized prior to July 1, 1945, but excluding repayments on debts arising out of World War I. Repayments on agent-bank loans of the Export-Import Bank are included.

## SPECIAL NOTES ON PROPERTY CREDITS

As previously pointed out, the data presented in the tables under surplusproperty and lend-lease credits are subject to the following qualifications for individual countries:

1. Belgium.—The final amount of the Foreign Liquidation Commissioner bulk-sales credit will depend on the proceeds received from the resale of surplus property by the Belgian Government for the joint account of the two countries. The figures shown for credit committed and utilized represent the current estimate of the United States Government's share in the proceeds.

2. France.—The \$420,000,000 credit, assignable to lend-lease under the war-account settlement agreement of May 28, 1946, was not a fixed amount but was an estimate subject to later adjustment pending final determination of the amount of goods delivered. A final determination was subsequently made in the agreement signed March 14, 1949, which fixed the obligation of France assignable to lend-lease at \$353,300,000, reflecting a cancellation of

\$66,700,000.

3. Netherlands.—Lend-lease credits utilized are stated in the amount of \$48,000,000, the agreed net indebtedness established by the war-account settlement with the Netherlands dated May 28, 1947. This includes \$840,000 due for surplus property sold by the Foreign Liquidation Commissioner in January 1947. The difference between the \$65,000,000 unutilized lend-lease credit reported as of June 30, 1945, and the \$48,000,000 war-account settlement credit has been shown as a cancellation of credit commitments.

4. United Kingdom.—A lend-lease credit commitment in the amount of \$590,000,000 represents the amount assigned to lend-lease (exclusive of lend-lease silver), in the war-account settlement agreements with the United Kingdom dated December 6, 1945, and March 27, 1946. This amount was composed of \$472,000,000, regarded as the "fixed" amount, and \$118,000,000 subject to future accounting adjustments representing the net estimated amount of the lend-lease and reverse lend-lease pipelines, less the net claims.

amount of the lend-lease and reverse lend-lease pipelines, less the net claims. A later agreement with the United Kingdom, signed July 12, 1948, set \$90,446,911 as the amount to be paid to the United States Government to replace the previous estimated amount of \$118,000,000. This reduction of \$27,553,089 has been shown as a cancellation of the original commitment.

5. U. S. S. R.—The gross lend-lease commitments represent the original estimated value of articles and services on order and not transferred as of VJ-day which were designated for transfer on a credit basis; the cancellations represent downward revisions in the original estimates.

6. Latin America.—Lend-lease mutual-aid agreements were signed with all the American Republics except Argentina and Panama. Combined data for these lend-lease credits are shown in *Unallocated Latin America*.

391EXHIBITS

7. China.—The gross lend-lease commitments represent the original estimated value of articles and services on order and not transferred as of VJ-day which were designated for transfer on a credit basis; the cancellations represent downward revisions in the original estimates. The \$20,000,000 represent downward revisions in the original estimates. shown as a credit for the Army Department represents the estimated amount of surplus property delivered by the Army subject to future settlement.

8. India.—The exact amount of the Foreign Liquidation Commissioner

bulk-sales credit will depend on the proceeds received from the resale of surplus property by the Government of India for the joint account of the United States and India. The figures shown for credit commitment and utilization are based on the latest estimate of the United States Govern-

ment's share in the proceeds.

#### PRESENTATION OF DATA IN TABLES

The presentation of the data for foreign credits and grants of the United States Government in the tables of this appendix, while not identical with that in all previous reports of the National Advisory Council, is similar and comparable.

Table XIV shows foreign credits and grants utilized in the 4½-year postwar period in various combinations with amounts unutilized as of the end of the period. Table XV is a summary of the status of foreign credits as of June 30, 1945, and as of December 31, 1949, and of the activity during the intervening 4½-year period. Table XVI is in three parts and presents, by type of program, grants (1) utilized in the 4½-year postwar period, (2) utilized in the six-month period ended December 31, 1949, and (3) unutilized as of December 31, 1949. Tables XVII-XXI and XXIII present a breakdown by credit-extending agency of the credit data (as of December 31, 1949, and during the 4½-year period), summarized in table XV. Table XXII shows a breakdown by credit-extending agency of the credits utilized in the six-month period from July 1, 1949, through December 31, 1949. All these

tables present the data by geographical area and country.

Table XXIV shows, by fiscal year over the 4½-year period, utilized grants and credits, and as of December 31, 1949, unutilized grants and credits, classified by program.

Table XXV presents ERP aid received by participating countries from the United States as well as aid received from or provided to other participants

under the OEEC intra-European payments plan.

The figures in each of the tables are rounded to whole millions of dollars, hence components will not necessarily add to totals because of rounding. In the ERP Participants area, each country having any data has been shown individually. all other areas, any country whose total or largest dollar amount cannot be rounded to \$5,000,000 or more has been combined with other countries in that area whose dollar amounts cannot be rounded to \$5,000,000 or more and the total has been rounded and shown as Other. In determining whether a country should be shown individually or in combination with other countries in an area, each table has been treated separately.

Whenever the country detail to be shown for an area is one item only (one country or, in accordance with the above, exclusively Other), only the area total appears, and this area total is shown even though the figure is less than \$5,000,000. each item shown (area, country, other, or unallocated), the detail figures for that item appearing in any column are shown, even though in some instances they may be less than \$5,000,000.

The unallocated items are aid or potential aid that cannot be allocated by coun-In most instances such items have been allocated by area. The composition of the unallocated items is covered either elsewhere in this Explanatory Note

or in footnotes to the tables.

Although some Foreign Liquidation Commissioner accounts have been transferred to the Foreign Accounts and Collections Section, Division of Investments. Treasury Department, and the War Assets Administration accounts are now under the General Services Administration, these credits are shown in the tables under the name of the original contracting agency in order to preserve continuity of statistical data.

Table XIV.—Summary of U. S. Government foreign credits and grants: utilized, July 1, 1945, to December 31, 1949; and unutilized as of December 31, 1949, by area and country 1

¹ For important qualifications affecting this table and for definitions of terms, see the Explanatory Note. For agency break-down of the first 6 columns of this table, see tables XVII-XXI and XXIII. Outstanding indebtedness at Dcc. 31, 1949, is equivalent to the sum of outstanding indebtedness at June 30, 1945, plus the difference between the amount utilized and the amount repaid during the period July 1, 1945, to Dec. 31, 1949. Unutilized credits at Dec. 31, 1949, is equivalent to the sum of unutilized credits at June 30, 1945, and the amount authorized during the period July 1, 1945, to Dec. 31, 1949, less the sum of the amount expired and canceled and the amount utilized during the period July 1, 1945, to Dec. 31, 1949. 1949.

<sup>1049.

2</sup> Most items in the June 30, 1945, columns relate to loans by the Export-Import Bank. Major other agency credits were as follows: Belgium, \$55,000,000 unutilized lend-lease credit; Netherlands, \$36,137,087 outstanding lend-lease silver credit and \$65,000,000 unutilized lend-lease credit; United Kingdom, \$271,887,470 outstanding and \$35,000,000 unutilized loan by the Reconstruction Finance Corporation, and \$44,281,061 outstanding lend-lease silver credit; Bolivia, \$2,071,321 outstanding loans by the Reconstruction Finance Corporation; Unallocated Latin America, \$43,569,862 outstanding and \$52,364,138 unutilized lend-lease credit; Bahrein Islands, \$16,45,611 outstanding loan by the Reconstruction Finance Corporation; India, \$131,555,487 outstanding lend-lease silver credit; Saudi Arabia, \$8,558,773 outstanding lend-lease silver credit; Canada, \$6,706,952 outstanding loan by the Reconstruction Finance Corporation; Ethiopia, \$3,857,778 outstanding lend-lease silver credit; Liberia, \$1,801,259 outstanding and \$10,698,741 unutilized lend-lease credit; Australia, \$8,371,719 outstanding lend-lease silver credit.

3 Less than \$500,000.

4 Uncommitted lending authority of the Export-Import Bank.

Uncommitted lending authority of the Export-Import Bank.

## SELECTED STATEMENTS BY THE SECRETARY OF THE TREASURY

# Exhibit 30.—Address by Secretary of the Treasury Snyder before the American Life Convention, Chicago, Ill., October 6, 1949

The year 1948 marked a milestone in the history of life insurance in this country. Life insurance ownership passed the \$200 billion mark—twice the total only 13 years ago, and nearly thirty times the amount in force as little as a half century

From my acquaintance as a banker, I came to know the field of insurance as a

great and fascinating business.

The history of insurance probably goes back to the time of the ancient Egyptians and Hindus when mutual benefit societies were formed to aid unfortunate members through the contributions of all the members. And in Roman times, the medieval guilds assumed obligations which today would be regarded as life, accident or health insurance contracts.

But the broad use of insurance as a device for distributing loss developed among the merchants of Venice, Florence, and Genoa during the middle of the fourteenth

century and from there it spread over the whole of Europe.

The development of the life insurance contracts was slow. Many countries condemned life insurance as immoral wagers on human life and prohibited it by law, or at least regarded such insurance with disfavor. Today, we think it strange that the life insurance contract was prohibited in France until 1820, and until the

early part of the eighteenth century was not actively favored in England.

The life insurance business in the United States, as you know, had its beginning in the organization of a religious mutual benefit association in Pennsylvania in However as late as 1815 courts in Massachusetts questioned whether a life insurance contract was not repugnant to sound morals and, therefore, contrary

to public policy.

It was not until the middle of the nineteenth century that the insurance business in the United States really began to develop. This seems odd to us today when

insurance is one of our largest and most important business fields.

In reviewing its record of growth, it is clear that the life insurance business built its remarkable success on two simple principles: faithful observance of the

highest fiduciary standards, and faithful discharge of all contractual obligations. In a broader sense, these two principles are, of course, the foundation of all sound business, public as well as private. Over 150 years ago, the first Secretary of the Treasury wrote in his Report on Public Credit, that it is "by good faith, by a punctual performance of contracts.." that "States, like individuals, who observe their engagements are respected and trusted..." observe their engagements, are respected and trusted. . .

It is pertinent to remind ourselves that these words echo down to us from a time when our Nation was new and struggling for its existence. In 1790, there was nothing to back up the credit of our Government except the belief of our

citizens in themselves, and in their future.

Today, the credit of the United States Government has behind it a long history of faithful fulfillment of contractual obligations. Our national credit rests also on the foundation of the entire wealth and resources of this country. In 1949 as in 1790, however, our most precious asset remains the confidence of our citizens in the future of our country.

Confidence, in fact, built this Nation. As our people moved westward, confidence enabled them to face the hardships of their new environment with courage and determination. When the frontiers disappeared, other problems in our development as an industrial Nation arose. These, too, were tackled in the confident belief that they could be worked out successfully, without endangering any of the institutions we cherish.

Confidence that we will carry out our present domestic and international responsibilities is based essentially on our belief in the fundamental economic strength of this country. And it is clear that the success of all our efforts in maintaining a high level of production and business activity here at home depends

upon a full utilization of our economic strength.

There are a number of elements in our postwar economic situation which lend great strength to our present position. Notable among these has been the prudence of American business ever since VJ-day, in the field of credit extension—in both business credit and consumer credit. It has been evident in the stock market and generally in the commodity market. It was inevitable that businessmen should make strenuous efforts to reduce inventories as soon as the first signs of a buyer's market began to appear. Postwar inventories, in the aggregate, were not at any time excessive in relation to the volume of sales. Nevertheless, they were sharply reduced in many lines earlier this year in the belief that demand was falling back. But the tower of strength in the American economy was the continued flow of consumer income at a high rate. Average income of individuals for the first seven months of this year ran at a higher rate than for the comparable seven-month period last year, and indeed, for the entire calendar year 1948.

Retail buying has also been remarkably well sustained. The most recent figures for total retail sales—which include, in addition to department store purchases, such important items as expenditures for food, automobiles and gasoline—show a dollar volume only slightly below the corresponding months of a year ago. In physical volume, the sales are running slightly above last year. Another most important element of strength in our present situation is the

backlog of individual savings which today are at a record level.

Thrift has again become a vital factor in our present day life. This is particularly important when we recall that it was the thrift of individuals or groups of individuals that furnished the capital funds needed for our industrial development. Someone's savings helped to build our railroads, develop our petroleum industry, and create our steel empire. Thrift, in other words, has made a major contribution to the attainment of our present high level of production and employment.

Since the end of 1945, the savings of individuals in the United States have risen by the following percentages: United States savings bonds, 13 percent; life insurance, 30 percent; shareholdings in savings and loan associations, over 60 percent; deposits in mutual savings banks, 25 percent; savings accounts in commercial banks, 15 percent; postal savings accounts, about 10 percent; and checking accounts of individuals, about 10 percent. Of the various forms of liquid assets, only holdings of currency in the hands of individuals fell off.

In short, the purchasing power is there—in pay envelopes, in Government bonds, and in the bank. Our financial structure is sound, and credit conditions are encouraging. It is true that there is a new need for business to get out and sell. Now that conditions of ample supply have returned, the primary need of

our domestic business situation is to supply real customer demands.

In the four years since VJ-day, businessmen in this country have spent the tremendous sum of about \$85 billion for new equipment, and in construction and modernization of plants. Over \$15 billion of this amount has been spent during 1949.

By far the largest portion of postwar expenditures for capital purposes, however, reflects in one way or another the determination of our businessmen to make use of the recent discoveries and improved techniques to increase the efficiency of their plant operations, improve their products, and thus broaden their markets.

their plant operations, improve their products, and thus broaden their markets. The war compressed many decades of experiment and research into a few brief years. As we all know, there have been tremendous developments in the fields of physics, chemistry, plastics, and synthetics of all types. Industry has ingenious new ways of doing things. By the use of large quantities of oxygen, steelmakers have found they can increase their production from blast furnaces by 20 percent. New high-speed machine tools are doing three times the work of 1940 tools. A new coal-mining machine will multiply a miner's daily output ten times. Diesel locomotives do the work of three steam locomotives on many jobs.

All these factors indicate that we have it within our power to maintain prosperity in this country. But we must also keep in mind that our prosperity at home depends in important measure on the economic progress of our neighbors in this hemisphere and across the seas. We must work out ways and means of sharing

the special talents, skills and resources the nations separately possess.

To develop our world trade to the best interests of our people and of the people of other parts of the free world, it is necessary to promote the greatest possible free movement of goods and services between the trading countries of the world. When each country sells to other countries what it can produce with particular efficiency and cheapness, it earns foreign exchange with which it can acquire from other nations the things that they can produce most efficiently, and cheaply. This type of trade is obviously beneficial to both sides. There are many things which it is to our advantage to acquire from other countries rather than to produce ourselves. Within our own frontiers the kinds of industry in which a given city or state specializes are determined by the interplay of prices and the cost of production in that particular area, when compared in terms of dollars with the cost of producing similar goods in other parts of our country.

EXHIBITS 413

However, other nations have their own currencies and compute their costs and prices in terms of those local currencies. When we compare the cost of production of a particular article in this country with the same article in other countries, we have to convert the foreign price into dollars at the applicable rate of exchange. The foreign producer who sells in the United States receives the dollar price converted into his local currency at the established exchange rate. By comparing his proceeds from sales to the United States with the proceeds which he might earn from sales at home or to other areas he decides where to market his products. Similarly, our own producers measure the advantage of foreign trade by converting into dollars, at the current exchange rate, their proceeds in sterling, francs, or other foreign currencies. When it is profitable to sell abroad they do so.

Most of the exchange rates against the dollar have, until recently, remained unchanged since shortly after the end of the war. In the meantime, prices and costs have risen in many foreign countries to a greater extent than in the United States. As a result it became increasingly less attractive to sell goods for dollars, than for the so-called soft currencies. Moreover, the relatively high prices of goods abroad made them unattractive to American importers. At the same time, these exchange rates, which were considered by many people as "over-valued", made American goods appear cheap in terms of the foreign currencies. Hence, the public in the foreign countries had a strong preference for dollar goods which were restricted by direct rationing of dollars through import licenses and other

measures

The adjustments of exchange rates which have been made during September by a number of foreign countries tend to remove many of these artificial price relationships which previously existed. These adjustments bring the prices of dollar goods back into a more appropriate relationship with the prices of other goods in foreign countries. They increase the incentive to foreign businessmen to expand their efforts to earn dollars through foreign trade. At the same time they reduce the excessive demands for dollar exchange in foreign countries and ease the pressure on the foreign exchange control systems of these countries. They point to a higher level of trade in both directions, for only by expanding their dollar earnings can foreign countries continue to purchase, by their own means, the American goods which they require, thus reducing the need for assistance from the United States.

To put this matter in concrete terms, we now export goods at the rate of about \$12 billion a year to foreign countries. Our imports of goods are running at a level of about \$6 to \$6½ billion a year. It is desirable to maintain a high level of American exports, for this is beneficial both to us and to the rest of the world. It provides employment and incomes to our people, and makes available needed

goods to foreign countries.

Foreign trade is also advantageous to the American people, because it enables us to obtain goods which we cannot produce here, or which other countries can

produce more cheaply.

It is clear that foreign countries cannot continue to spend \$12 billion a year in our markets unless they can earn the dollars. That means that we must import more, spend more on tourism and other services, and make sound capital investments abroad if we are to maintain the level of our own export trade. At the present time a large part of the gap between our exports and our imports is covered by American foreign aid programs. The bare and simple logic of arithmetic makes it apparent that the gap must be closed as this assistance is reduced.

The recent adjustments in exchange rates should help to improve the dollar position of foreign countries. However, this action does not constitute a cure-all for the difficult and complex problems currently faced in international payments. Exchange adjustment is merely a step which helps to clear the way by removing some handicaps to the effective and fluid functioning of a world price system in accordance with the economic incentives to free enterprise. It does provide an environment in which friendly governments and business enterprises may work

more hopefully toward the common objective of expanding world trade.

We Americans face many difficult problems, both domestic and international. We are meeting these problems squarely, and I believe we are making real progress in helping to solve them. But I do want to leave with you members of the life insurance industry—an industry which has played such an important part in the growth and development of this country—the reminder that these problems will continue to require full energies and efforts of all our citizens. For it will take all the ingenuity, courage, and steadfastness of purpose that we can individually and collectively muster to insure a prosperous and peaceful world.

## Exhibit 31.—Address by Secretary of the Treasury Snyder before the American Bankers Association, San Francisco, Calif., November 1, 1949

It is a real pleasure to be here today with the bankers of America. This occasion brings back many pleasant memories of other meetings which I have attended with the members of your Association—both nationally assembled, as today, and

in the conferences held by your State associations.

This year, many current issues have given us concern. There have been business readjustments to evaluate; there has been a need for new decisions in the field of international finance; and there have been serious new trials of our determina-tion to win the peace. You bankers, as leaders in your communities and in the Nation, have, I know, been giving all of these matters your most serious thought.

At times, the size and number of the difficulties which confront us may have seemed discouraging. But we can gain real encouragement, and readjust our perspective, if we look back a little. It has been four years since VJ-day—four years of such rapid change that it is hard to recall the problems which seemed so formidable during the early postwar period, let alone the predictions of what was to happen. Even the short space of six months—the last six months, specifically has been long enough to bring an entire reversal of opinion on the part of those who narrowly limited their vision to surface changes in the business scene.

When we look at these past four years as a whole—and separate the important from the less important—one major fact stands out. And that is the strength which our system of private enterprise and democratic Government has demonstrated in the face of constantly changing situations. On the domestic front, our economy has shown a flexibility and a capacity for uninterrupted progress which we would not have dared predict four years ago. And in the area of international relations, our people have shown a sympathetic understanding and a willingness to offer assistance which has greatly strengthened the efforts of free nations the world over to live and work together.

These are the real achievements of the four years just passed. They are the real measure of the distance we have gone since VJ-day.

In a broader sense, however, they are the fruit of our much longer experience

in working together to make our democratic system function.

This year the American Bankers Association has entered its 75th year of coopera-re endeavor. You can be proud of the great contributions you have made to American banking during the lifetime of your Association, and of the increasing capacity which you have shown for productive work of national significance.

When we look back over the past three quarters of a century, a momentous period in our history, the fact that impresses us most is that here in America, more than in any other country in the world, the environment has been provided in which inventive and productive genius could flourish.

As a young, growing country, we believed in change and in planning for a larger And our belief was justified. Productivity—the true source of our high American standard of living-has constantly increased. Obsolete industries and outmoded ways of doing things have given way to new products and new techniques, and, in the process, millions of new jobs were created.

The farsighted cooperation of American banking has made a great contribution

to American progress. Down through the years, banking practice and banking operation have grown with our economy. Today, you bankers must be specialists in the whole broad field of business analysis and customers' needs. You must be able to interpret business and economic trends, not only in your own communities, but in the Nation as a whole.

For the very reason, however, that economic conditions and business practices have changed so radically during the past 75 years, we Americans are apt to think of our progress solely in terms of material achievements. Certainly we have every reason to take pride in these achievements; for they have brought better living and richer opportunities for development to all of our citizens.

But our real progress is not to be measured by material things alone. In a deeper sense, it can only be judged by the changes which take place, year by year, in the scale of values which we as a people apply to our daily living.

Many of these values are codified into law, but fundamentally they rest on our

concepts of right and wrong, of what is fair and decent, and of what we will do and will not do as respected members of our communities.

It is important to realize that the changes over the years in the ethical values which govern our daily actions are equally as striking as the spectacular achievements in the material field. And it is important to realize, also, that the high

standards which govern our conduct today have grown out of the experience of successive generations of Americans in acting together for a common purpose. We have transmitted our heritage of freedom, guaranteed by the Bill of Rights, from one generation to the next, yet each generation, out of its full measure of rich and varied experience has preserved and strengthened this priceless heritage. We must continue to add greater strength to the moral fabric of our Nation.

Let me illustrate this by the changes which have been occurring in our own field—banking and finance. In the short space of time since your Association was founded, bankers in this country have become more than bankers; they have learned to disassociate themselves from their strictly personal interest and to participate more actively in national and international affairs.

Today, bankers and representatives of other business groups come to Washington voluntarily to give the Government the benefit of their best thinking on the financial problems which confront the Nation. And often, the advice given

is against their own immediate interests.

One striking instance is the position which was taken by the representatives of your Association during the period of inflationary pressures. At that time, you bankers did not hesitate to recommend that the Treasury reduce bank-held debt and distribute Federal securities more widely among the people of the

country.

There have been many other occasions on which you have urged the Government to take a course of action which, viewed in the narrow sense, was in conflict with your own short-term interests. But your advice has been frankly offered, nevertheless, because as citizens of this country you have learned that our democratic system can only function on the basis of certain fundamental principles of good citizenship: free discussion, active participation, and a

primary concern for the general welfare.

There are numerous other instances of the voluntary participation of the commercial bankers of this country in activities which contribute primarily to the sound functioning of the economy as a whole. Your splendid cooperation in promoting the savings bond program during and since the war-without profit, and, indeed, at the expense of considerable time and personal effort—is an out-Another is the voluntary credit control program of your standing example. Association, undertaken last year when inflationary developments were threatening the financial stability of the Nation.

Today, the public service activities of commercial bankers have become so commonplace that they are apt to be taken for granted. But it is important to recognize that they are of tremendous consequence in the daily conduct of our

business life.

The distance we have gone along this cooperative road is illustrated even more strikingly in another area of governmental finance—our revenue system.

Just remember that ours is one of the few countries in the world today that is able to rely for the major portion of its revenue on taxes that are voluntarily reported and paid by the mass of its citizens. During the past three years, an average of 96 percent of all internal revenue taxes collected have been on the basis of voluntary assessment and payment.

Under any other than voluntary self-assessment and payment—we may be sure—the costs of tax administration would be many times their present amount, while the receipts realized by the Government would be much lower. there is considerable doubt as to whether our present broadly based income tax could be continued at all in the absence of a spirit of genuine cooperation on the

part of the great majority of our taxpaying citizens.

This basic willingness of our citizens to comply with the tax laws voluntarily did not come about by chance, and it could not have been achieved by statute. It came about because we believed in our free institutions sufficiently to devote time and energy, year after year, to shaping our laws and adapting our customs

generally to fit the changing requirements of a vigorous, growing Nation.

There are many other examples of the lessons which we Americans have learned in the course of democratic living. As you will note, I have chosen only the ones which are closest to your own everyday experience—and to mine. But wherever we look, our institutions and our ways of doing things provide clear evidence that our democratic system of Government works; that it can be adapted to meet all the needs and all the aspirations of a free people.

These needs and aspirations will change—just as they have changed in the st. This year, in particular, we have had to adjust ourselves to many new

907795--51-

But the basic strength of our country has again been demoncircumstances. strated.

American business is having another tremendous year in 1949. The predictions of the pessimists that we could not return to conditions of abundant supply without severe dislocations of the economy have proven unfounded. We have experienced business readjustments—many of them—throughout the economy. Certain industries and localities have, of course, felt the impact of the adjustment more severely than others.

On the broader front of the national economy, however, it has become increasingly apparent as the year went forward that the basic factors making for our continued growth and progress have been far stronger than the forces tending to

pull us back.

Both incomes and jobs—in the aggregate—have held up, month after month, at close to the all-time record level of last year. Incomes, so far this year, have averaged even higher than in the same months of the highly prosperous 1948. Total civilian employment in recent months has been practically at the 60 million figure; and unemployment, at its seasonal peak during the summer, amounted to a little over 6 percent of the total labor force.

Since mid-summer, as you know, there has been a noticeable improvement many lines of activity and trade. This has been reflected in a number of the in many lines of activity and trade. indexes which sum up business trends; and it has been reflected, also, in a more

confident attitude on the part of the business community.

I am speaking, of course, of basic conditions, which will determine the main business trend over the months ahead. I shall not attempt to forecast the duration of current work stoppages, which, in any event, can dominate the business picture only temporarily. Serious as they appear today, when they are finally settled, the strong underlying forces will again come into full play, and production will be expanded to build up depleted stocks.

In the vital area of manufacturing employment, the number of workers employed has risen more than seasonally since July. This is particularly significant,

since manufacturing activities were among the first to be affected by inventory adjustments during the past 12 months.

Throughout this period, the continued high volume of retail sales has provided unmistakable evidence of the strength of consumer demand. Total retail sales in September, the latest month available, were only 2 percent lower than last year in dollar value, and were higher than last year in actual unit volume. Demand has been sustained not only by the continued high level of incomes, but also by the backlog of purchasing power inherent in our all-time record volume of personal savings.

The financial situation, likewise, could scarcely be in a sounder position. you know, bankers and businessmen alike have taken precautions that credit did not become over-extended during the inflationary period. But as inflation pressures diminished, credit was immediately available in needed quantities. But as inflationary

Therefore, starting with a basically sound present situation we face the future with many demands which industry has thus far been unable to meet. ing among these are the continued urgent requirements for new construction, particularly of new houses and community facilities.

For many years, the repair and modernization of these facilities were allowed We have now a greatly increased rate of population growth; we have had vast shifts in population between different sections of the country; and in all of our metropolitan areas there has been a tremendous movement toward a decentralization of housing, shopping centers, and service facilities.

We have 8 million more families in the United States today than we had in

These people must be fed, clothed, housed, educated, and provided with a 1940.

wide variety of community services.

These developments mean new demands for many types of construction, and for the building of new roads and highways. Their powerful influence is seen in the unusually high volume of building activity so far this year, and in the number of commitments already made for the future. Contract awards in September for new residential construction were 88 percent higher than a year earlier; while total construction awards were 43 percent higher.

Such influences as these will provide continued strong support to our economy

in the days ahead.

In addition, I could mention many new developments resulting from our wartime discoveries which may well provide a volume of demand for new and improved products unprecedented in the business history of this country.

In my belief, an important explanation of the success with which we have overcome our postwar difficulties, and forged ahead, lies in the fact that we have had faith in our American system and in our American ways of doing things.

We accepted our responsibilities, whether domestic or foreign, in that same spirit of confidence which has marked American endeavor since this Nation's

earliest days.

Yes, much has already been accomplished; and our banking history, just as truly as the record of our other achievements, reflects these advances. are undertaking their broader responsibilities in the life of the Nation with the utmost earnestness and integrity of purpose. They are making great contributions to the successful functioning of our free enterprise system and our democratic form of Government in all of its many aspects. And they are doing this because they have found that working together for the common welfare pays; that only joint efforts—on a voluntary basis—can provide the clear thinking and bold

Our problems will not be easy, and—on both the domestic and the foreign fronts—we may be sure that they will seldom take the exact form of problems which we have met before. But we in America are accustomed to overcoming We are not dismayed by change. We have made it clear that we will continue to devote all of our energies and all of our will to strengthening the

foundations of our individual freedom, and our own way of living.

# Exhibit 32.—Address by Secretary of the Treasury Snyder before the U. S. Savings Bonds Conference, Washington, D. C., March 29, 1950

The presence here tonight of so many leaders of business and industry is a tribute to the importance of the savings bond program, and I assure you that the Treasury Department is deeply grateful for your continued voluntary cooperation

and support.

In a few short weeks we will be opening the Independence Drive. You people are being called upon to spearhead this drive as it reaches into every community of our Nation. I welcome the opportunity to be here with you tonight and to I welcome the opportunity to be here with you tonight and to discuss the important role which savings bonds continue to play in the economic independence of our people and the financial strength of our country.

Today, as never before, the spotlight of history is focused upon our Nation. The world's hope for peace and stability depends in large measure upon the economic, military, and spiritual strength of this Nation. The task, then, falls to every one of us as individual Americans to see that our own economic house is in good order, and stands firmly on a sound foundation.

Our democratic form of government offers the individual greater opportunities than any other system of government in the world today. Every American has

a stake in the preservation of this system.

During the past year we have had a concrete demonstration of what the savings of the American people have meant in promoting the economic stability of the Nation. During the early half of 1949 an inventory adjustment caused a sharp drop in factory production, and people in various industries were thrown out of work. Many felt that the decline in incomes and the rise in unemployment would arouse general apprehension; that it would have a depressing effect on

But nothing of the kind happened. The large backlog of personal savings gave people a feeling of financial security, and they continued their normal purchasing. Total retail sales held up, month after month, at close to the high

levels of the previous year.

By midyear it became very apparent that people were taking more goods off the market than the factories were producing. By fall, the factories were again stepping up production to meet the great volume of incoming orders.

The key factor in our present economic stability is public confidence. This widespread confidence rests in part upon the financial security provided by the record holdings of personal savings, of which savings bonds form a very important part. Public confidence also rests upon the Nation's immensely strong financial structure, and upon the general knowledge that people's incomes today are better protected than ever before.

More than 4½ years have passed since the end of the war. Now, nearly all of

our industries have completed their readjustment to competitive markets, and

our economy is on a sound and stable basis.

Personal income in January this year, not including the veterans' insurance payments, was at an annual rate of \$213 billion—the highest for any month since January 1949. Retail sales—a basic measure of the demand for consumer goods—have continued at a high level. In the first two months of 1950, in fact, the dollar volume of retail sales was 2½ percent higher than a year ago, despite lower average prices.

The very favorable near-term business outlook rests on obvious factors of strength that have been frequently pointed out. The longer outlook, in my opinion, is likewise reassuring. We have some distance to go in meeting the backlog of demand for new houses and other construction, while our population

continues to grow.

Our factories have invested huge sums for new plant and equipment since the war, yet it is obvious that this expansion has not been over-expanded, in view of the continued development of new products, new industrial machinery and new technical processes.

Most importantly, the continued cautious attitude of businessmen, bankers. and other important groups has aided in preventing any excessive expansion in

credit, in speculation, or in inventories, such as always has occurred before any important business downturn.

The Treasury's major objective has been to maintain this Nation's financial soundness through fiscal policies and debt management operations which are designed to cement confidence in the credit of this Government. I believe that the course of action which the Treasury has pursued in maintaining that confi-

dence has contributed greatly to our present unparalleled economic position.

America has come a long way since our forefathers signed the Declaration of Independence. Yet we have by no means reached our maturity. America is still a young Nation. There is no limit to what we can accomplish through our

system of free American enterprise.

This Nation was founded on the traditional American concept of thrift. It is thrift which will was thrift which helped us attain our present greatness. lead America to new heights of achievement in the years ahead.

America's leaders in every field—business, agriculture, labor—have long regarded the savings bonds program as a winning factor in the maintenance and the preservation of our system of free enterprise.

It gives every American citizen the opportunity to actively participate in a systematic program of thrift which not only insures future security for himself and his family, but gives him a stake in insuring the future security of his country.

It does not matter whether a man's income is great or small—whether he lives on a farm or in a crowded metropolitan area—he given the opportunity to buy the savings bond which represents a personal share in his country's future.

The savings bonds program is a strong unifying force in our national life. Each savings bond volunteer has himself experienced the heart warming knowledge that in making a bond sale, he is making a personal contribution. that he is actually doing something for the good of his community and his country.

I should like to take a moment to point out a striking example of what Govern-. ment bond holdings mean to the people of our country. You may be interested to know that the Government bond holdings of individuals are now equivalent

to the total value of all farm real estate in the country.

Ownership of Government securities by millions of individuals is good for the country as well as for those individuals. It gives the people of the country an increased interest in the affairs of their Government and causes them to partici-

pate more actively in those affairs.

We believe that an essential phase of debt management is achieved by distributing the ownership of the debt among as many Americans as possible—and by permitting as many individuals and families as possible to share in interest payments. The savings bonds program helps to accomplish both these objectives.

Most important of all, the savings bonds program represents the individuals throughout America who now hold close to \$49 billion of savings bonds. It is the men and women who buy the bonds; the men and women who sell them to other people—friends, families, neighbors, fellow workers. It is the millions of working men and women now saving regularly through the automatic payroll savings plan.

These holdings seem particularly significant when we recall that at the bottom

of the depression—in 1933—the national income in the country was only \$39½ Across the Nation, people now have a cushion of reserves to fall back upon that is far greater than the total income in the Nation in that year.

As you people go forward to carry the message of the Independence Drive to your States and local communities, you—and the millions of volunteer workers who will assist you—can be proud of the product you have to sell. It is not a new product, for thrift is as old as America, itself. It is not an untried product, for it is thrift that has spelled progress for our Nation. It is an old and timeproven product, but not in any sense an old-fashioned one.

The product we have to sell is as up to date as the atomic age we are entering. Savings bonds have been designed to meet the modern day needs of every Amer-They are not a luxury which only the wealthy can afford—they have been

designed to meet the individual needs of every class.

Moreover, you are selling something the people need and want—a product which not only gives them future personal independence but assures a free and strong America in which to enjoy the fruits of their savings.

As you know, the Independence Drive will run from May 15 to July 4. The national sales goal for the drive is \$650 million in E bonds. Our savings bonds volunteers have always met and exceeded their sales goal. I am sure the Independence Drive, through your leadership, will continue this fine record.

I should like to ask you to carry to your local workers my sincere thanks for the spirit in which they are undertaking this praiseworthy and most important task. In encouraging thrift, they are helping to preserve our system of individual enterprise. They are helping to guarantee our economic security and stability—and thus they are helping to preserve the peace and security of all the world.

## Exhibit 33.—Address by Secretary of the Treasury Snyder before the American Institute of Banking, Minneapolis, Minn., June 12, 1950

I am delighted to be here today to participate with you in the 50th anniversary celebration of the American Institute of Banking. It is particularly interesting to note the large number of women who have come as delegates to the meetings this year. This represents quite a change from the first years of your association's history. In this connection, I would like to call your attention to a news item which appeared in one of the early bulletins of your Institute published in 1901. At that time, a trust company in Chicago had just installed 13 girls at the teller's windows in its savings department. This was certainly news of great interest in the hearly proved since these girls were said to be the solly ones to held such

the banking world, since these girls were said to be the only ones to hold such positions in the United States. The report further stated that these young ladies were not employed with a view toward reducing salaries, since their pay was to be the same as the men—\$25 a month at the start.

I need not remind this audience of the increasingly important responsibilities which the business women of this country have undertaken since the time when

this news item was printed.

The expanding opportunities for those of you in the banking field during the past 50 years have reflected the growing importance of our banks and of our finan-

cial institutions generally in the business life of the Nation.

Fifty years ago, the business of banking in this country was a far different matter from the complex loan and investment operations of today. In most communities outside of the leading financial centers, its success depended almost entirely on personal knowledge of local prospects and local borrowers. Credit decisions on this basis were by no means easy, as Mr. Kent and others whose experience goes back that far will testify. The quality of judgment has remained the most important single ingredient of successful banking, but the techniques of credit analysis have been enormously extended in the years since your association was founded.

Today, every important credit decision calls for a mass of specific information ad analysis. It calls for a wide background knowledge of national business and analysis. trends and their significance locally. And, finally, it calls for the education and the experience necessary to evaluate all of the facts and to translate those facts into the right answer.

The business of banking has always presented particularly difficult problems to American bankers, because the investment of funds requires an evaluation of the future, and in America conditions are always changing. Today, as in the days of the frontier, we are continually having to make adjustments to new knowledge, new tastes, and new surroundings. The tremendous surge westward of American industry during and since the war—with its implication of population

changes and community developments—is an instance in point.

This atmosphere of change—of newness—which has been the environment of each generation of Americans, has had a significant influence on our development. It has contributed in an important measure to making us a Nation of strong individuals, constantly alert to new opportunities and new ways of doing things. These particular traits of the American character have been fostered also by our representative system of government. They have been strengthened by the fact that our free enterprise system puts a premium on initiative, resourcefulness, and ability to see a job through. And, as the pace of activity has quickened, individual abilities have been further encouraged by the American concept of education as a continuing aid in the business of daily living.

Your own association, the American Institute of Banking, grew out of the needs of practical businessmen. Its increasing services, over the years, have reflected the growing realization that doing business in the dynamic American economy calls for a constant flow of new facts, and a constant reappraisal of old ones. Throughout the 50 years of the Institute's history, your members have recognized that practical experience is most valuable when it is enriched by broad background information and by the training needed to put that information to good use.

Today the need for services such as those provided by the American Institute of Banking is greater than ever before. I have noted that the founders of your association—with some courage, I may say—chose the field of commercial law as their first subject of study. At that time, a compilation of "Federal Laws Affecting National Banks" required only 63 pages. Today, almost 500 pages are needed to cover the ground. This is just one illustration of the complicated nature of modern financial operations as compared with the situation a half or even a quarter of a century ago.

The achievements of American banking during the past half century, however, cannot be measured alone by reference to the growing complexities of banking operations. Their true measure is the progress of our country during this period. In the decades since 1900, we have changed from a predominantly rural and small town economy to the greatest industrial organization in the world. And industrial development has required financing. It has required a tremendous volume

of capital investment.

In America, the capital fortunately has been forthcoming. It is estimated that the process of mechanization alone, over the past 100 years, has taken capital goods valued at over \$600 billion. And this year, as you know, American industry is continuing its program of expansion. During the first quarter of 1950, over \$5 billion was invested in modernization and in new plant and equipment, making a record total of more than \$95 billion in the postwar period as a whole.

These dollar sums are significant as an indication of the faith which Americans have in their future. They are significant as an indication of the important function performed by banking and finance in this country. That function is the business of assisting Americans to turn out materials and services and merchandise

for people to use.

It has taken considerable financing to carry new products, new ideas, and new mechanical devices of all kinds into millions of American homes and factories and farms. In the process, many industries which were flourishing in 1900 have all but disappeared. But as older techniques and older products were replaced, millions of new jobs opened up. It is interesting to consider that today, a significant proportion of the wage earners in manufacturing alone are producing commodities or services that in 1900 were produced in the household. In addition, millions of our people are employed in turning out products or services which were either unknown in 1900 or available to only a limited few. As our economy has become more complex and our standards of living ever higher, the processes of production and marketing have called to an increasing extent on the specialized services of finance. And the developmental work necessary to pay the way for mass output and for the extended application of new techniques has depended, at every stage, on capital.

In the days of the early frontiersmen and prospectors who came by river and over land to this part of the country, very little more was required in the way of assets than a large fund of courage and determination. But the later development of our western States could not have taken place without the substantial

investment of capital funds.

The discovery of the Minnesota iron ore reserves, for example, was an event of extreme importance in the economic history of this country. It is less well known, but highly important, that improvements in the arts of mining and mineral processing since the opening of the Mesabi Range are of almost equal significance with the discovery itself. Intensive research programs have led to methods of concentrating low-grade ores which are opening up vast new reserves. new plant for concentrating ores of this type—now in the process of constructionwill, I am told, have an annual capacity of one million tons.

The same thing has happened in the chemical industry—in metal alloys—and, most strikingly of all, in agriculture and soil science. In almost every field of output, we have passed far beyond the boundaries of a production potential limited by the known resources and techniques of a generation ago. And it is capital investment—traced back, in every instance, to someone's decision that America's future was worth backing—which has made possible the phenomenal

achievements of American industry.

This year, business improvements represent an important forward movement in our national economy. They are supported by our rapidly growing population, our continued high income levels, our strong credit and financial situation, and the great technical progress which the capital investment of recent years has

provided.

The rapid rate of population growth has been an extremely important factor in the progress in our own country. It has provided an expanding market here—
the greatest market in the world—for the increasing output of American agriculture and American industry. Today, as in the past, the growing American market
is a dynamic force making for business expansion.

The current rate of population growth means that during 1950 alone the American market will be enlarged by 2½ million people. Also, there has been a very rapid increase during the past decade in the number of families. Forty percent of all our families are new families—the result of the 17½ million marriages since 1940. This means, of course, that the need for separate homes and for separate facilities of all kinds is increasing even more rapidly than the population figures would indicate.

The buying power of our people, moreover, has continued at a very high level. Aided by the special insurance dividend to veterans, personal incomes this year are the highest on record. Even without this dividend, current incomes are above

the corresponding period last year.

Retail sales throughout the postwar period have reflected a basic confidence in the economic outlook. During the readjustment period of 1949, consumer buying held like a stone wall against the setback in production. Early in 1949, you will recall, the return of buyers' markets had caused many businessmen to liquidate inventories. Declining orders for stock soon had their effect on output. But with incomes continuing high—and a record backlog of savings—most families saw no need to cut down on their purchases. While they bought less of some things, they bought more of others. For 1949 as a whole, total retail sales in actual unit volume proved to be higher than the record sales of the previous year. And continued high sales soon led to the restocking of merchandise and to an increase in production.

The rise in production is still under way. Retail sales, in the meantime, have also expanded. So far this year they have been running some 6 percent greater in physical volume than a year ago. Industrial production is now close to the record peacetime level reached in the fall of 1948, while employment in May was

at a new high record for that month.

The business advance so far has given very little indication of underlying weakness. The prevailing spirit of confidence has shown no signs of developing into excessive optimism. Business planning generally has remained cautious, and inventories have been kept conservative. There has been no important volume of speculation in the stock or commodity markets. Bank loans, on the whole, have shown no unduly large increase, and our credit and financial situation in general remains reassuring.

The problems which face our Nation today make it imperative that we maintain this strength. It is the task of those in the Government and of every individual American to see that our economic structure is stronger than ever before. We must continue to demonstrate the effectiveness of our system of free enterprise in opening up the resources of our country, and spreading their benefits across the Nation. We must continue to prove that our form of Governbenefits across the Nation.

ment offers the individual greater opportunities than any other system of Govern-

ment in the world today.

As members of the American Institute of Banking, you have a particular responsibility for approaching the day-to-day problems of banking operation in the light of their relation to the broader issues of our national well-being. For our economy to remain strong, it will be of vital importance to assure the continued soundness of our credit structure and to protect the economy from the dangers of excessive speculation. But in observing these primary rules of economic health, it is important never to lose sight of the fact that our economy, to continue healthy, must continue growing. Our success in maintaining our growth and at the same time keeping the foundations of our strength unimpaired will depend on many thousands of individual decisions in the banks, in the business offices, and in the homes of the Nation.

These decisions will shape our future.

#### ORGANIZATION AND PROCEDURE

# Exhibit 34.—Treasury Department orders relating to organization and procedure

No. 117, July 1, 1949, Transfer of Books and Forms Unit to Office of Administrative Services

Pursuant to authority vested in me by section 161 of the Revised Statutes (U. S. C., title 5, sec. 22), and to other authority vested in me as Secretary of the Treasury, the Books and Forms Unit, Bureau of Federal Supply, having been Treasury, the Books and Forms Unit, Bureau of Federal Supply, having been retained in the Treasury Department pursuant to the determination of the Director, Bureau of the Budget, under authority of P. L. 152 (1st sess., 80th Cong.), is hereby assigned to and made a part of the Office of Administrative Services, effective July 1, 1949. The specific determinations of functions, records, property, personnel, and funds to be transferred shall be made by the Administrative Assistant to the Secretary. Control over and supervision of the Books and Forms Unit as transferred shall thereafter be in the Director of Administrative Services. istrative Services.

E. H. Foley, Jr., Acting Secretary of the Treasury.

No. 118, August 9, 1949; Designation of Administrative Assistant to the SECRETARY TO DIRECT THE EFFECTUATION OF EXECUTIVE ORDER 10072 OF July 29, 1949

By virtue of the authority vested in me as Secretary of the Treasury and section 161 of the Revised Statutes and all other provisions of law, I hereby designate the Administrative Assistant to the Secretary, serving also as Chairman of the Treasury Department Management Committee, as the official to direct and coordinate the effectuation of Executive Order 10072 of July 29, 1949, in the Treasury Department.

In assuming this responsibility and to insure that the Government and the Department will attain maximum benefits in the accomplishment of this mission, the Administrative Assistant to the Secretary is authorized and directed to

enlist all necessary facilities and personnel of the Department.

JOHN W. SNYDER, Secretary of the Treasury.

No. 119, October 25, 1949, Designation of Officials to Grant Quarters AND COST OF LIVING ALLOWANCES TO CIVILIAN EMPLOYEES STATIONED IN FOREIGN COUNTRIES

In accordance with the provisions of sections 1.5 (a) and 1.6 of the Standardized Government Civilian Allowance Regulations (Foreign Areas) the following officers of the Treasury Department, or the officers authorized to act in their

423

absence, have been designated by me to grant quarters and cost of living allowances to civilian officers and employees stationed in foreign countries:

> Assistant Secretary of the Treasury Administrative Assistant to the Secretary Deputy Commissioner of Customs (Fiscal Administration) Commissioner of Accounts Chief Disbursing Officer

The above-named officials are also charged with the responsibility of reporting to the General Accounting Office, in accordance with regulations prescribed by the Comptroller General, the rates at which the allowances are granted, any revisions in the rates of such grants, and the dates of their commencement, revision, and termination.

E. H. FOLEY, Jr., Acting Secretary of the Treasury.

AMENDMENT DECEMBER 5, 1949, TO TREASURY DEPARTMENT ORDER No. 119 In accordance with the provisions of section 1.5 (a) and 1.6 of the Standardized Government Civilian Allowance Regulations (Foreign Areas), the Deputy Commissioner of Customs (Management and Controls), and the Head, Fiscal Section, Bureau of Customs, or the officers authorized to act in their absence, are hereby designated by me to grant quarters and cost of living allowances to civilian officers and employees stationed in foreign countries. These officials are also charged with the responsibility of reporting to the General Accounting Office, in accordance with regulations prescribed by the Comptroller General, the rates at which the allowances are granted, any revisions in the rates of such grants, and the dates of their commencement, revision, and termination.

The authority granted to the Deputy Commissioner of Customs (Fiscal Administration) under the provisions of Treasury Department Order No. 119 is hereby rescinded, inasmuch as the title of that position has been changed to Deputy Commissioner of Customs (Management and Controls).

This order amends Treasury Department No. 119, dated October 25, 1949,

and shall be effective today.

E. H. Foley, Jr., Acting Secretary of the Treasury.

No. 81, Revised February 2, 1950, Relating to the Committee on Printing and Publication

By virtue of the authority vested in me as Secretary of the Treasury by section 161 of the Revised Statutes, Executive Order 397 of January 20, 1906, and all other provisions of law, I hereby establish in the Treasury Department a Committee on Printing and Publication.

In the interest of further economy and efficiency, the Committee shall exercise general supervision over all printing and binding originating in and procured for use by the Treasury Department. The Committee shall make recommendations regarding regulations governing or affecting the general printing policies of the Department, and such regulations shall be subject to the approval of the Administrative Assistant to the Secretary.

The Committee shall consist of the Assistant to the Administrative Assistant or his alternate, as Chairman, the Assistant Commissioner of Internal Revenue for Operations or his alternate, and the Chief of Headquarters Administration Division, U. S. Coast Guard or his alternate.

This order supersedes Treasury Department Order No. 81, dated February 14, 1947.

John S. Graham. Acting Secretary of the Treasury No. 79, Revised March 28, 1950, Relating to the Treasury Awards Committee

Treasury Department Order No. 79, dated January 14, 1947, is herewith revised

and reissued as follows:

By virtue of the authority vested in me as Secretary of the Treasury by section 161 of the Revised Statutes, section 12 of the act of August 2, 1946, 60 Stat. 809 (U. S. C., title 5, sec. 22a), Executive Order 9817 of December 31, 1946, and all other provisions of law, I hereby delegate to the Administrative Assistant to the Secretary the authority set forth in section 14 of the act of August 2, 1946, 60 Stat. 809 (U. S. C., title 5, sec. 116a) and the authority set forth in section 1002 of the Classification Act of 1949 (Public Law 429, 81st Congress). All awards contemplated by the above-cited sections shall be under the general jurisdiction and subject to the general direction of the Administrative Assistant to the Secretary.

The Efficiency Awards Committee provided for in section 1002 of the Classification Act of 1949 and Bureau of the Budget Circular A-8, Supplement No. 1 of February 28, 1950, shall hereinafter be known as the Treasury Awards Committee

with membership constituted as follows:

Chairman	Assistant to the Administrative Assistant
Vice Chairman	Senior Organization and Methods Examiner,
	Office of the Administrative Assistant
Member	Director of Personnel
Member	Budget Officer
Member	Assistant Director, Bureau of the Mint
	Assistant Director for Administration, Bureau
•	of Engraving and Printing
Member	o Chief, Planning and Control Staff, U.S. Coast
	Guard
Member	Senior Assistant General Counsel
Member	Assistant to the Fiscal Assistant Secretary
Member	Chief Coordinator, Treasury Enforcement
Member	
	Revenue
Member	Deputy Commissioner of Customs for Manage-
	ment

This Committee will take such action as may be necessary to achieve prompt and equitable recognition of superior accomplishment, meritorious suggestions, exceptional or meritorious service by civilian officers and employees of the Treasury. The Treasury Awards Committee shall administer the Treasury awards programs in accordance with this order and the requirements of Bureau of the Budget Circular No. A-8, Supplement No. 1.

John W. Snyder, Secretary of the Treasury.

## MISCELLANEOUS

Exhibit 35.—Letters of Secretary of the Treasury Snyder to the Chairman of the Government Operations Subcommittee of the House Committee on Expenditures in the Executive Departments concerning the rate of interest paid on public debt securities issued to trust funds

TREASURY DEPARTMENT, Washington, November 10, 1949.

My Dear Mr. Chairman: This is in reply to your letter of October 20, 1949, requesting the Treasury's comments on the report prepared by the Committee's staff concerning the rate of interest paid on public debt obligations of the United States issued to the national service life insurance fund. It is noted that this report has been prepared on the premise that the 3 percent interest rate paid on securities issued to the fund is abnormally high and that there appears to be no legal basis for the action of the Treasury in fixing such rate.

I am sure your Committee does not entertain any doubt as to the legality of the action of the Treasury in issuing public debt obligations to the national service life insurance fund or in fixing the rate of interest borne by such obligations.

Under U. S. Code, title 38, section 805, there is created in the Treasury a permanent trust fund to be known as the national service life insurance fund and the Secretary of the Treasury is authorized to invest or reinvest such fund, or any part thereof, in interest-bearing obligations of the United States or in obligations guaranteed as to principal and interest by the United States, and to sell such obligations for the purposes of such fund. The special Treasury notes, national service life insurance fund series, issued to the fund, have been issued under the provisions of the Second Liberty Bond Act, as amended, U. S. Code, title 31, section 753. Under this authority the Secretary of the Treasury, with the approval of the President, is authorized to borrow from time to time on the credit of the United States for certain authorized purposes, such sum or sums as in his judgment may be necessary, and to issue therefor notes of the United States at not less than par, in such form or forms and denomination or denominations, containing such terms and conditions and such rate or rates of interest, as the Secretary of the Treasury may prescribe, and each series of notes so issued shall be payable at such time not less than one year and not more than five years from the date of its issue as he may prescribe.

date of its issue as he may prescribe.

It will be observed that the Treasury notes issued under the foregoing authority shall be at such rate or rates of interest as the Secretary of the Treasury may prescribe, with the approval of the President. Thus, the interest rate borne by securities issued to the national service life insurance fund is for determination in the discretion of the Secretary of the Treasury, with the approval of the

President.

In providing for the establishment of the national service life insurance fund and the investment of such fund in interest-bearing obligations of the United States, the Congress did not specifically indicate the rate of interest which such obligations should bear. However, the law provides (U. S. Code, title 38, section 802e) that the premium rates for national service life insurance shall be the net rates based upon the American Experience Table of Mortality and interest at the rate of 3 percent per annum, and that all cash, loan, paid up, and extended values, and all other calculations in connection with such insurance, shall be based upon said American Experience Table of Mortality and interest at the rate of 3 percent per annum. In view of this provision of law, it appeared reasonable to assume that the Congress anticipated that the fund would be invested so as to earn an interest rate of 3 percent per annum, and on this basis, the Treasury determined upon a 3 percent interest rate for the special Treasury notes issued to the fund.

In view of the great growth of trust funds administered by the Treasury in recent years and the investment of such funds in public debt obligations of the United States, the Treasury and the Bureau of the Budget have had their staffs making an intensive study of the subject of the interest rates borne by the public debt obligations issued to the funds to determine whether it is advisable to make any changes in the rates of interest now being paid on special obligations issued to the various funds. There are numerous inconsistent statutory provisions governing the investment of such funds which provide in some cases for specified interest rates and in other cases for no specified interest rates, or for rates determined by certain fixed formulae. The national service life insurance fund is one of the funds included in this study. A report of the staff study has not yet been completed although such report is anticipated in the near future in the absence of any unforeseen circumstances which may delay its completion. The Congress, of course, can remove all grounds for differences in opinion as to the proper interest rate to be paid to any particular fund by enacting statutory provisions definitely fixing a particular rate or prescribing a basis for determining the rate of interest to be paid on investments of Government trust funds, as has been done in the case of the railroad retirement, the Federal old-age and survivors insurance trust fund, and the unemployment trust fund. These latter funds aggregate in excess of \$18 billion.

Very truly yours,

John W. Snyder, Secretary of the Treasury.

Honorable Porter Hardy, Jr.,

Chairman, Government Operations Subcommittee of the Committee on Expenditures in the Executive Departments,

House of Representatives, Washington, D. C.

TREASURY DEPARTMENT, Washington, May 22, 1950.

My Dear Mr. Chairman: On January 30, 1950, I wrote you in answer to your letter of January 17, in which you had asked to be advised of the progress being made on our study relating to the subject of interest rates borne by public debt obligations issued to various trust funds. Certain of these rates, as you are aware, are required by legislation passed at a time when the interest rate structure was considerably different from what it is now.

In the absence of specific guides or directives by the Congress, there is, to my mind, only one position which can be justified with respect to interest rates paid by the Treasury on securities issued to the trust funds and not available to the public; that is the average cost to the Government of funds borrowed from the public. This cost is represented by the average interest rate on all public interest-bearing securities of the Federal Government outstanding at any one time. The

figure is published in the daily Treasury statement each month.

The public interest-bearing securities of the Government include marketable issues such as bills, certificates, and Treasury bonds; and they also include public nonmarketable issues such as the various series of savings bonds. On April 30, 1950, the average rate on all of these issues amounted to 2.145 percent as compared with an average rate of 2.646 percent now being paid on special issues held by the seven major trust funds. On these seven funds, the difference in interest costs on the basis of these two rates amounts to approximately \$145 million a year.

The major justification for using the average rate on all public interest-bearing securities is the fact that it is the most realistic measure of the cost of Government borrowing. As you know, the policy of the Treasury during and since the war has been to plan its security issues in such a way as to meet the needs of the various investors having funds available for investment in Federal securities. It is in this way only that the Treasury can secure the maximum of funds needed for its purposes from nonbank investors at a minimum interest cost to the Government.

The wide variety of maturities and interest rates represented by the Federal debt in the hands of the public at the present time thus has two purposes. First, it greatly increases the flexibility of public debt operations from the point of view of debt management. Second—and this is the point which has particular bearing for the matter in hand—it is a means of attracting private investment funds with greatly varying requirements as to rate of return, length of investment,

and possibilities for cash redemption.

Certificates of indebtedness, for example, which are securities maturing within a year, are particularly well suited to the needs of corporations who wish to invest certain funds for short periods only. Our longest term bonds, on the other hand, are a type of security which best suits the needs of institutional investors, such as insurance companies and mutual savings banks, who are not looking for a quick turnover of funds but for a maximum return on long-term investments. And our Series E savings bonds, to take a final example, are especially adapted to the needs of small individual investors who wish to combine a satisfactory return with maximum security and accessibility of funds in case of need.

These examples illustrate what the Treasury means when it talks about suiting the terms of Federal securities to the needs of investors. This is not done because of any desire to make it easier for private investors to solve their individual problems or to earn a satisfactory return on idle funds. It is done, as I have already emphasized, because it is in this way, and in this way only, that the Treasury can draw, to the fullest extent, on funds available for investment in the hands of nonbank investors; and thereby meet its needs and carry on its operations in such a way as to contribute to the good health of the Nation's economy.

As you will readily see, these considerations which call for a variety of interest rates and of other conditions applicable to securities offered in the open market do not apply to the funds available for investment on the part of the trust funds. Neither one of the considerations which I mentioned above as controlling the terms of Federal security issues—namely, flexibility in public debt operations and suitability to varying needs of private investors—applies in the case of trust fund accumulations. It would be inappropriate and of no benefit to the Treasury under present conditions to extend the criterion of flexibility for public debt management to securities planned for special issue to the trust funds. And since the accumulations in the trust funds are not available for investment in private enterprise, there is no need to shape the securities offered these funds in order to fit in with conditions in the money market or in the economy generally.

It may be that at some time in the future, with respect to some of the funds, past accumulations and specified current contributions will have to be supplemented further by direct appropriations of Federal revenue in order to meet benefit obligations. This need not concern us now because the rights of beneficiaries under Federal Government trust funds—unlike those under private trust funds—are secured by the very fact that the taxing power of the Government stands behind them. There would seem to be no reason under these circumstances for a current budget burden having no necessary relation to the rights and benefits of the recipients of trust funds, and which would in most cases only succeed in moving back to the present a budget charge relating to future expenditures.

The question of direct appropriations raises one further point which should, perhaps, be clarified at this time. It is possible that a situation might arise in which the operations of a trust fund would seem to require a higher return on investments than that provided by the average rate of interest on funds borrowed from the public. In that event, the higher rate would be in the nature of a It is my view that decisions with respect to such a subsidy should not be within the discretion of the Treasury, but should rest with the Congress. If funds were needed, they could then be made available to the trust fund through

direct appropriation.

From every point of view, therefore, it is the considered opinion of the Treasury Department that the rate of interest on Federal securities issued to the trust funds should be the average rate paid on funds borrowed from the public. The adoption of this rate for trust fund issues would be in line with the principles which guide the Treasury at all times in the discharge of its responsibilities to the American people for prudent management of the Nation's finances.

Very truly yours,

JOHN W. SNYDER, Secretary of the Treasury.

HONORABLE PORTER HARDY, Jr.,

Chairman, Government Operations Subcommittee of the Committee on Expenditures in the Executive Departments,

House of Representatives, Washington, D. C.

Exhibit 36.—An act to authorize the President to determine the form of the national budget and of departmental estimates, to modernize and simplify governmental accounting and auditing methods and procedures, and for other purposes

[Public Law 784, 81st Congress, H. R. 9038]

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Budget and Accounting Procedures Act of 1950".

# TITLE I-BUDGETING AND ACCOUNTING

#### PART I-BUDGETING

SEC. 101. Section 2 of the Budget and Accounting Act, 1921 (42 Stat. 20), is

amended by adding at the end thereof the following:

"The term 'appropriations' includes, in appropriate context, funds and authorizations to create obligations by contract in advance of appropriations, or any

zations to create obligations by contract in advance of appropriations, or any other authority making funds available for obligation or expenditure."

Sec. 102. (a) Section 201 of such Act is amended to read as follows:

"Sec. 201. The President shall transmit to Congress during the first fifteen days of each regular session, the Budget, which shall set forth his Budget message, summary data and text, and supporting detail. The Budget shall set forth in such form and detail as the President may determine—

"(a) functions and activities of the Government;

"(b) any other desirable classifications of data;

"(c) a reconciliation of the summary data on expenditures with proceed

"(c) a reconciliation of the summary data on expenditures with proposed

appropriations; "(d) estimated expenditures and proposed appropriations necessary in his judgment for the support of the Government for the ensuing fiscal year, except that estimated expenditures and proposed appropriations for such year for the legislative branch of the Government and the Supreme Court of the United States shall be transmitted to the President on or before October 15 of each year, and shall be included by him in the Budget without revision:

"(e) estimated receipts of the Government during the ensuing fiscal year, under (1) laws existing at the time the Budget is transmitted and also (2)

under the revenue proposals, if any, contained in the Budget;

"(f) actual appropriations, expenditures, and receipts of the Government during the last completed fiscal year;

"(g) estimated expenditures and receipts, and actual or proposed appropriations of the Government during the fiscal year in progress; "(h) balanced statements of (1) the condition of the Treasury at the end

of the last completed fiscal year, (2) the estimated condition of the Treasury at the end of the fiscal year in progress, and (3) the estimated condition of the Treasury at the end of the ensuing fiscal year if the financial proposals contained in the Budget are adopted;

"(i) all essential facts regarding the bonded and other indebtedness of the

Government; and

"(j) such other financial statements and data as in his opinion are necessary or desirable in order to make known in all practicable detail the financial condition of the Government."

(b) Section 203 of such Act is amended to read as follows:

"Sec. 203. (a) The President from time to time may transmit to Congress such proposed supplemental or deficiency appropriations as, in his judgment (1) are necessary on account of laws enacted after the transmission of the Budget, or (2) are otherwise in the public interest. He shall accompany such proposals with a statement of the reasons therefor, including the reasons for their omission from the Budget.

"(b) Whenever such proposed supplemental or deficiency appropriations reach an aggregate which, if they had been contained in the Budget, would

have required the President to make a recommendation under subsection (a) of section 202, he shall thereupon make such recommendation."
(c) Section 204 of such Act is amended to read as follows:
"Sec. 204. (a) Except as otherwise provided in this Act, the contents, order, and arrangement of the proposed appropriations and the statements of expenditures and estimated expenditures contained in the Budget or transmitted under section 203, and the notes and other data submitted

therewith, shall conform to requirements prescribed by the President.

"(b) The Budget, and statements furnished with any proposed supplemental or deficiency appropriations, shall be accompanied by information as to personal services and other objects of expenditure in the same manner and form as in the Budget for the fiscal year 1950: Provided, That this requirement may be waived or modified, either generally or in specific cases, by joint action of the committees of Congress having jurisdiction over appropriation: And provided further, That nothing in this Act shall be construed to limit the authority of committees of Congress to request and receive such information in such form as they may desire in consideration of and action upon budget estimates."

(d) Section 205 of such Act is amended to read as follows:

"Sec. 205. Whenever any basic change is made in the form of the Budget, the President, in addition to the Budget, shall transmit to Congress such explanatory notes and tables as may be necessary to show where the various items embraced in the Budget of the prior year are contained in the new

Budget."

(e) The last sentence of section 207 of such Act is amended to read as follows: "The Bureau, under such rules and regulations as the President may prescribe, shall prepare the Budget, and any proposed supplemental or deficiency appropriations, and to this end shall have authority to assemble, correlate, revise, reduce, or increase the requests for appropriations of the several departments or establishments."

(f) Section 214 of such Act is amended to read as follows: "Sec. 214. The head of each department and establishment shall prepare or cause to be prepared in each year his requests for regular, supplemental, or deficiency appropriations."

(g) Section 215 of such Act is amended to read as follows: "Sec. 215. The head of each department and establishment shall submit his requests for appropriations to the Bureau on or before a date which the President shall determine. In case of his failure to do so, the President shall cause such requests to be prepared as are necessary to enable him to include such requests with the Budget in respect to the work of such department or establishment."

(h) Section 216 of such Act is amended to read as follows:

"Sec. 216. Requests for regular, supplemental, or deficiency appropriations which are submitted to the Bureau by the head of any department or establishment shall be prepared and submitted as the President may determine in accordance with the provisions of section 201.

### Government statistical activities

Sec. 103. The President, through the Director of the Bureau of the Budget, is authorized and directed to develop programs and to issue regulations and orders for the improved gathering, compiling, analyzing, publishing, and disseminating of statistical information for any purpose by the various agencies in the executive branch of the Government. Such regulations and orders shall be adhered to by such agencies.

## Improved administration of executive agencies

SEC. 104. The President, through the Director of the Bureau of the Budget. is authorized and directed to evaluate and develop improved plans for the organization, coordination, and management of the executive branch of the Government with a view to efficient and economical service.

# Business-type budgets

SEC. 105. The first two sentences of section 102 of the Government Corporation Control Act of 1945 (59 Stat. 597), are amended to read as follows: "Each wholly owned Government corporation shall cause to be prepared annually a businesstype budget which shall be submitted to the Bureau of the Budget, under such rules and regulations as the President may establish as to the date of submission, the form and content, the classifications of data, and the manner in which such budget program shall be prepared and presented.

#### PART II-ACCOUNTING AND AUDITING

#### Short title

SEC. 110. This part may be cited as the "Accounting and Auditing Act of 1950".

#### Declaration of policy

SEC. 111. It is the policy of the Congress in enacting this part that-

(a) The accounting of the Government provide full disclosure of the results of financial operations, adequate financial information needed in the management of operations and the formulation and execution of the Budget, and effective control over income, expenditures, funds, property, and other assets.

(b) Full consideration be given to the needs and responsibilities of both the legislative and executive branches in the establishment of accounting and

reporting systems and requirements.

(c) The maintenance of accounting systems and the producing of financial reports with respect to the operations of executive agencies, including central facilities for bringing together and disclosing information on the results of the financial operations of the Government as a whole, be the responsibility

of the executive branch.

(d) The auditing for the Government, conducted by the Comptroller General of the United States as an agent of the Congress be directed at determining the extent to which accounting and related financial reporting fulfill the purposes specified, financial transactions have been consummated in accordance with laws, regulations or other legal requirements, and adequate internal financial control over operations is exercised, and afford an effective basis for the settlement of accounts of accountable officers.

(e) Emphasis be placed on effecting orderly improvements resulting in simplified and more effective accounting, financial reporting, budgeting, and auditing requirements and procedures and on the elimination of those which involve duplication or which do not serve a purpose commensurate with the costs involved.

(f) The Comptroller General of the United States, the Secretary of the Treasury, and the Director of the Bureau of the Budget conduct a continuous program for the improvement of accounting and financial reporting in the Government.

## Accounting and reporting provisions

SEC. 112. (a) The Comptroller General of the United States, after consulting the Secretary of the Treasury and the Director of the Bureau of the Budget concerning their accounting, financial reporting, and budgetary needs, and considering the needs of the other executive agencies, shall prescribe the principles, standards, and related requirements for accounting to be observed by each executive agency, including requirements for suitable integration between the accounting processes of each executive agency and the accounting of the Treasury Depart-Requirements prescribed by the Comptroller General shall be designed to permit the executive agencies to carry out their responsibilities under section 113 of this part, while providing a basis for integrated accounting for the Government, full disclosure of the results of the financial operations of each executive agency and the Government as a whole, and financial information and control necessary to enable the Congress and the President to discharge their respective responsibili-The Comptroller General shall continue to exercise the authority vested in him by section 205 (b) of the Federal Property and Administrative Services Act of 1949 (63 Stat. 389) and, to the extent he deems necessary, the authority vested in him by section 309 of the Budget and Accounting Act, 1921 (42 Stat. 25). Any such exercise of authority shall be consistent with the provisions of this section.

(b) The General Accounting Office shall cooperate with the executive agencies in the development of their accounting systems, including the Treasury Department, in the development and establishment of the system of central accounting and reporting required by section 114 of this part. Such accounting systems shall be approved by the Comptroller General when deemed by him to be adequate and in conformity with the principles, standards, and related requirements prescribed by him

(c) The General Accounting Office shall from time to time review the accounting systems of the executive agencies. The results of such reviews shall be available to the heads of the executive agencies concerned, to the Secretary of the Treasury, and to the Director of the Bureau of the Budget, and the Comptroller

General shall make such reports thereon to the Congress as he deems proper.

SEC. 113. (a) The head of each executive agency shall establish and maintain systems of accounting and internal control designed to provide—

(1) full disclosure of the financial results of the agency's activities;

(2) adequate financial information needed for the agency's management purposes;

(3) effective control over and accountability for all funds, property, and other assets for which the agency is responsible, including appropriate internal

(4) reliable accounting results to serve as the basis for preparation and support of the agency's budget requests, for controlling the execution of its budget, and for providing financial information required by the Bureau of the Budget under section 213 of the Budget and Accounting Act, 1921 (42 Stat. 23)

(5) suitable integration of the accounting of the agency with the accountof the Treasury Department in connection with the central accounting and reporting responsibilities imposed on the Secretary of the Treasury by section 114 of this part.

(b) The accounting systems of executive agencies shall conform to the principles, standards, and related requirements prescribed by the Comptroller General

pursuant to section 112 (a) of this part.

SEC. 114. (a) The Secretary of the Treasury shall prepare such reports for the information of the President, the Congress, and the public as will present the results of the financial operations of the Government: *Provided*, That there shall

be included such financial data as the Director of the Bureau of the Budget may require in connection with the preparation of the Budget or for other purposes of the Bureau. Each executive agency shall furnish the Secretary of the Treasury such reports and information relating to its financial condition and operations as the Secretary, by rules and regulations, may require for the effective

performance of his responsibilities under this section.

(b) The Secretary of the Treasury is authorized to establish the facilities necessary to produce the financial reports required by subsection (a) of this section. The Secretary is further authorized to reorganize the accounting functions and install, revise, or eliminate accounting procedures and financial reports of the Treasury Department in order to develop effective and coordinated systems of accounting and financial reporting in the several bureaus and offices of the Department with such concentration of accounting and reporting as is necessary to accomplish integration of accounting results for the activities of the Department and provide the operating center for the consolidation of accounting results of other executive agencies with those of the Department. The authority vested in and the duties imposed upon the Department by sections 10, 15, and 22 of the Act entitled "An Act making appropriations for the legislative, executive, and judicial branches of the Government for the fiscal year ending June thirtieth, eighteen hundred ninety-five, and for other purposes", approved July 31, 1894 (28 Stat. 162, 208-210), may be exercised and performed by the Secretary of the Treasury as a part of his broader authority and duties under this section and in such a manner as to provide a unified system of central accounting and reporting on the most efficient and useful basis.

(c) The system of central accounting and reporting provided for herein shall be consistent with the principles, standards, and related requirements prescribed

by the Comptroller General pursuant to section 112 of this part.

SEC. 115. (a) When the Secretary of the Treasury and the Comptroller General determine that existing procedures can be modified in the interest of simplification, improvement, or economy, with sufficient safeguards over the control and accounting for the public funds, they may issue joint regulations providing for the waiving, in whole or in part, of the requirements of existing law that—

(1) warrants be issued and countersigned in connection with the receipt,

retention, and disbursement of public moneys and trust funds; and

(2) funds be requisitioned, and advanced to accountable officers under

each separate appropriation head or otherwise.

(b) Such regulations may further provide for the payment of vouchers by authorized disbursing officers by means of checks issued against the general account of the Treasurer of the United States: *Provided*, That in such case the regulations shall provide for appropriate action in the event of delinquency by disbursing officers in the rendition of their accounts or for other reasons arising out of the condition of the officers' accounts, including under necessary circumstances, the suspension or withdrawal of authority to disburse.

SEC. 116. The Comptroller General is authorized to discontinue the maintenance in the General Accounting Office of appropriation, expenditure, limitation, receipt, and personal ledger accounts when in his opinion the accounting systems and internal control of the executive, legislative, and judicial agencies are sufficient to enable him to perform properly the functions to which such accounts relate.

#### Auditing provisions

SEC. 117. (a) Except as otherwise specifically provided by law, the financial transactions of each executive, legislative, and judicial agency, including but not limited to the accounts of accountable officers, shall be audited by the General Accounting Office in accordance with such principles and procedures and under such rules and regulations as may be prescribed by the Comptroller General of the United States. In the determination of auditing procedures to be followed and the extent of examination of vouchers and other documents, the Comptroller General shall give due regard to generally accepted principles of auditing, including consideration of the effectiveness of accounting organizations and systems, internal audit and control, and related administrative practices of the respective agencies.

(b) Whenever the Comptroller General determines that the audit shall be conducted at the place or places where the accounts and other records of an executive agency are normally kept, he may require any executive agency to retain in whole or in part accounts of accountable officers, contracts, vouchers, and other documents, which are required under existing law to be submitted to the General

907795-51---29

Accounting Office, under such conditions and for such period not exceeding ten years as he may specify, unless a longer period is agreed upon with the executive agency: *Provided*, That under agreements between the Comptroller General and legislative and judicial agencies the provisions of this sentence may be extended to the accounts and records of such agencies.

## General provisions

SEC. 118. As used in this part, the term "executive agency" means any executive department or independent establishment in the executive branch of the Government but (a) except for the purposes of sections 114, 116, and 119 shall not include any Government corporation or agency subject to the Government Corporation Control Act (59 Stat. 597), and (b) except for the purposes of sections 111, 114, and 116 shall not include the Post Office Department.

SEC. 119. The head of each executive agency is authorized to designate the place or places, at the seat of government or elsewhere, at which the administrative examination of fiscal officers' accounts will be performed, and with the concurrence of the Comptroller General to waive the administrative examination in whole or in part: *Provided*, That the same authority is hereby conferred upon the officers responsible for the administrative examination of accounts for legislative

and judicial agencies.

#### TITLE II—APPROPRIATIONS

# Authorizations for appropriations

SEC. 201. No requests for legislation, which, if enacted, would authorize subsequent appropriations for a department or establishment in the executive branch of the Government, shall be transmitted to the Bureau of the Budget, to the President, or to the Congress by such department or establishment, or by any organization unit thereof, without the prior approval of the head of such department or establishment.

# Adjustment of appropriations for reorganization

Sec. 202. (a) When under authority of law a function or an activity is transferred or assigned from one agency within any department or establishment to another agency in the same department or establishment, the balance of appropriations which are determined by the head of such department or establishment to be available and necessary to finance or discharge the function or activity so transferred or assigned may, with the approval of the President, be transferred to, and be available for use by, the agency to which said function or activity is transferred or assigned for any purpose for which said funds were originally available. Balances so transferred shall be credited to any applicable existing appropriation account or accounts, or to any new appropriation account or accounts, which are hereby authorized to be established, and shall be merged with funds in the applicable existing or newly established appropriation account or accounts and thereafter accounted for as one fund.

(b) When under authority of law a function or activity is transferred or assigned from one department or establishment to another department or establishment, the balance of appropriations which are determined by the President to be available and necessary to finance or discharge the function or activity so transferred or assigned, shall be transferred to and be available for use by the department or establishment to which said function or activity is transferred or assigned for any purpose for which said funds were originally available. Balances so transferred shall be credited to any applicable existing appropriation account or accounts, or to any new appropriation account or accounts, which are hereby authorized to be established, and shall be merged with funds in the applicable existing or newly established appropriation account or accounts and thereafter accounted for as

one fund.

# TITLE III—REPEALS AND SAVING PROVISIONS

#### Repeals

SEC. 301. The following Acts and parts of Acts are hereby repealed:
(1) Section 10 of the Act of August 1, 1914 (38 Stat. 680; U. S. C., title 31, sec. 582).

(2) So much of section 4 of the Act of June 20, 1874 (18 Stat. 109; U. S. C., title 31, sec. 583 (1)), as reads: "; and hereafter the Secretary of the Treasury shall annually submit to Congress detailed estimates of appropriations required for said expenses;".

(3) The last proviso in the first paragraph under the heading "Judgments; United States Courts" of the Act of April 27, 1904 (33 Stat. 422; U. S. C., title

31, sec. 583 (2)).

(4) The last sentence of section 5 of the Act of August 5, 1882 (22 Stat. 256; U. S. C., title 31, sec. 583 (3)).
(5) So much of the matter appearing under the heading "Mints and Assay Offices" of the Act of March 4, 1911 (36 Stat. 1292; U. S. C., title 31, sec. 583 (4)), as reads: ", and the Secretary of the Treasury shall, for the fiscal year nineteen hundred and thirteen, and annually thereafter, submit to Congress in the regular

book of estimates, detailed estimates for the expenses of this Service".

(6) So much of the matter appearing under the heading "Treasury Department" in the Act of August 26, 1912 (37 Stat. 596; U. S. C., title 31, sec. 583 (5)), as reads: "Provided further, That estimates hereunder shall be submitted in detail for the fiscal year 1914, and annually thereafter".

(7) The last sentence of the paragraph under the heading "Federal Farm Loan Board" of the Act of September 8, 1916 (U. S. C., title 31, sec. 583 (7)), appearing on page 803 of volume 39 of the Statutes at Large; and the third and last paragraph under the heading "Federal Farm Loan Bureau" of the Act of March 3 1917 (U. S. C., title 31, sec. 583 (7)), appearing on page 1084 of volume 39 of the Statutes at Large.

(8) The last sentence on page 48 of volume 30 of the Statutes at Large, in the Act of June 4, 1897 (U. S. C., title 31, sec. 583 (8)).

(9) The first sentence of section 6 of the Act of March 3, 1919 (40 Stat. 1309;

U. S. C., title 31, sec. 583 (10)).
(10) The last proviso under the heading "Office of the Chief Signal Officer" of the Act of March 2, 1907 (34 Stat. 1159; U. S. C., title 31, sec. 583 (11)).

(11) The sixth full paragraph appearing on page 648 of volume 29 of the Statutes at Large in the Act of March 3, 1897 (U. S. C., title 31, sec. 583 (13)).

(12) So much of the matter following the heading "Bureau of Mines" in the Act of March 3, 1915 (38 Stat. 858; U. S. C., title 31, sec. 583 (14)) as reads: ", estimates shall be submitted specifically for all personal services required permanently and entirely in the Bureau of Mines at Washington, District of Columbia, and previously paid from lump-sum or general appropriations;

(13) The proviso at the end of the fourth paragraph on page 312 of volume 37 of the Statutes at Large, in the Act of August 17, 1912 (U. S. C., title 31, sec.

583 (15)).
(14) The third paragraph appearing on page 1082 of volume 32 of the Statutes
(14) The third paragraph appearing on page 1082 of volume 32 of the Statutes
(15) C. title 31, sec. 583 (16)).

at Large, in the Act of March 3, 1903 (U. S. C., title 31, sec. 583 (16)).
(15) So much of section 12 of the Act of June 26, 1906 (34 Stat. 480; U. S. C., title 31, sec. 583 (18)), as reads: "and he shall annually submit to Congress estimates to cover the cost of the establishment and maintenance of fish hatcheries in Alaska, the salaries and actual traveling expenses of such officials, and for such other expenditures as may be necessary to carry out the provisions of this Act"

(16) The proviso at the end of the first full paragraph on page 456 of volume 32 of the Statutes at Large, in the Act of June 28, 1902 (U. S. C., title 31,

sec. 583 (20)).

(17) The second full paragraph on page 841 of volume 38 of the Statutes at Large, in the Act of March 3, 1915 (U. S. C., title 31, sec. 583 (21)).
(18) The fourth full paragraph on page 2 of volume 38 of the Statutes at Large, in the Act of May 1, 1913 (U. S. C., title 31, sec. 583 (22)).

(19) The proviso at the end of the second paragraph under the heading "Bureau of Immigration and Naturalization" of the Act of March 4, 1907 (34 Stat. 1329,

(20) The second full paragraph on page 374 of volume 35 of the Statutes at Large, in the Act of May 27, 1908 (U. S. C., title 31, sec. 583 (25)).

(21) So much of the last paragraph on page 396 of volume 37 of the Statutes at Large, in the Act of August 23, 1912 (U. S. C., title 31, sec. 583 (25)).

(27) The second full paragraph on page 396 of volume 37 of the Statutes at Large, in the Act of August 23, 1912 (U. S. C., title 31, sec. 583 (26)), as reads:

("For the fiscal year nineteen hundred and fourteen and annually thereafter estimates in detail shell be submitted for all personal convices required in the estimates in detail shall be submitted for all personal services required in the Indian Office,"

(22) The proviso at the end of the first full paragraph on page 646 of volume 41 of the Statutes at Large, in the Act of May 29, 1920 (U.S. C., title 31, sec. 584).

- (23) Section 3660 of the Revised Statutes (U. S. C., title 31, sec. 585). (24) Section 4 of the Act of June 22, 1906 (34 Stat. 448; U. S. C., title 31, sec. 586)

(25) Section 4 of the Act of March 4, 1909 (35 Stat. 907; U. S. C., title 31, sec. 587)

(26) Section 2 of the Act of June 30, 1906 (34 Stat. 762; U. S. C., title 31, sec. 588); and the proviso in the first paragraph on page 1367 of volume 34 of the Statutes at Large, in the Act of March 4, 1907 (U. S. C., title 31, sec. 588).

(27) Section 3661, as amended, of the Revised Statutes (U. S. C., title 31,

sec. 589). (28) So much of the first paragraph on page 255 of volume 24 of the Statutes at Large, in the Act of August 4, 1886 (U. S. C., title 31, sec. 590), as reads: ": Provided further, That all printing and engraving for the Geological Survey, the Coast and Geodetic Survey, the Hydrographic Office of the Navy Department, and the Signal Service shall hereafter be estimated for separately and in detail, and appropriated for separately for each of said bureaus".

(29) Section 3662 of the Revised Statutes (U. S. C., title 31, sec. 591).

(30) Section 3663 of the Revised Statutes, as amended (U.S.C., title 31, sec. 594).

sec. 594).

(31) Section 3664 of the Revised Statutes (U. S. C., title 31, sec. 597).

(32) Section 3665 of the Revised Statutes (U. S. C., title 31, sec. 598).

(33) The second paragraph under the heading "Revenue-Cutter Service" in the Act of March 2, 1889 (25 Stat. 907; U. S. C., title 31, sec. 600).

(34) So much of the second full paragraph on page 512 of volume 24 of the Statutes at Large, in the Act of March 3, 1887 (U. S. C., title 31, sec. 601), as reads: "That the Secretary of the Treasury shall for the fiscal year eighteen bundred and eighty-seven and for each fiscal year thereafter in the annual hundred and eighty-seven, and for each fiscal year thereafter in the annual estimates, report to Congress the number of persons employed outside of the District of Columbia, as superintendents, clerks, watchmen and otherwise, and paid from appropriations for the construction of public buildings showing where said persons are employed, in what capacity, the length of time and at what rate of compensation,".

(35) So much of the sixth full paragraph on page 374 of volume 26 of the Statutes at Large, in the Act of August 30, 1890 (U.S. C., title 31, sec. 601) as reads: "; and hereafter the Secretary of the Treasury shall annually report to Congress in the book of estimates a statement of the expenditure of the appropriation for 'repairs and preservation of public buildings' which shall show the amount expended on each public building and the number of persons employed and paid salaries from such appropriation"

and paid salaries from such appropriation

(36) So much of section 1317 of the Revenue Act of 1921 (42 Stat. 314; U. S. C., title 31, sec. 602) as reads: "; and the Secretary of the Treasury shall submit for the fiscal year 1921, and annually thereafter, an estimate of appropriations to refund and pay back duties or taxes erroneously or illegally assessed or collected under the internal-revenue laws, and to pay judgments, including interests and costs, rendered for taxes or penalties erroneously or illegally assessed or collected under the internal-revenue laws".

(37) The first paragraph on page 133 of volume 22 of the Statutes at Large, in the Act of July 1, 1882 (U. S. C., title 31, sec. 603).

(38) The eighth paragraph under the heading "Foreign Intercourse" of the Act of May 3, 1905 (33 Stat. 1214; U. S. C., title 31, sec. 603).

(39) The last paragraph on page 48 of volume 30 of the Statutes at Large, in the Act of June 4, 1897 (U. S. C., title 31, sec. 604).

(40) The eighth paragraph under the heading "Under the Engineer Depart-

ment" of the Act of February 13, 1913 (37 Stat. 671; U. S. C., title 31, sec. 605).

(41) The sixth paragraph under the heading "Fortifications in Insular Posses-

sions" of the Act of March 3, 1905 (33 Stat. 847; U. S. C., title 31, sec. 606). (42) So much of the first section of the Act of August 4, 1886 (24 Stat. 246; U. S. C., title 31, sec. 607), as reads: "the estimates for the Army and Navy

hospital service shall be submitted as a part of the military establishment' (43) The first full paragraph on page 117 of volume 31 of the Statutes at Large, in the Act of April 17, 1900 (U. S. C., title 31, sec. 609).

(44) Section 3668 of the Revised Statutes (U. S. C., title 31, sec. 610).

(45) So much of the first paragraph on page 357 of volume 20 of the Statutes at Large, in the Act of March 3, 1879 (U. S. C., title 31, sec. 611), as reads: ": Provided, That hereafter, in making his estimates for railway mail service the Postmaster General shall separate the estimate for postal-car service from the

general estimates; and in case any increase or diminution of service by postal cars shall be made by him, the reasons therefor shall be given in his annual report next succeeding such increase or diminution".

(46) So much of the first paragraph under the heading "United States Geological Survey" in the Act of March 3, 1887 (24 Stat. 527; U. S. C., title 31, sec. 612), as reads: "; and hereafter the estimates for the Geological Survey shall be itemized"

(102) So much of the fourth full paragraph on page 558 of volume 39 of the Statutes at Large in the Act of August 29, 1916 (U. S. C., title 34, sec. 504), as reads: "and the Secretary of the Navy shall each year, in the annual estimates, report to Congress the number of persons so employed, their duties, and the amount paid to each".

(103) The last proviso in the third paragraph on page 377 of volume 37 of the Statutes at Large in the Act of August 23, 1912 (U. S. C., title 39, sec. 769).

(104) Section 27 of the Act of January 12, 1895, as amended (28 Stat. 604;

U. S. C., title 44, sec. 37). (105) The eighth full paragraph on page 382 of volume 35 of the Statutes at Large in the Act of May 27, 1908 (U. S. C., title 44, sec. 37). (106) The last paragraph under the heading "Government in the Territories" in the Act of June 20, 1874 (18 Stat. 99; U. S. C., title 48, sec. 1456).

## Saving provisions

Sec. 302. (a) The omission of any provisions of law from the provisions of law repealed under section 301 shall not be construed as limiting the application of section 201 or 216 of the Budget and Accounting Act, 1921, as amended, or the powers of the President thereunder, or as evidencing an intent that such provision was not to be superseded by such sections.

(b) Whenever any law authorizes expenditures for a particular object or purpose to be made from an appropriation item referred to in such law by the specific title theretofore used for that appropriation item in the appropriation Act concerned, and thereafter such title is changed or is eliminated from such appropriation Act, expenditures for such object or purpose thereafter may be made from any corresponding appropriation item.

(c) Except where authority for performance of a function is specifically repealed in section 301, none of the provisions of such section shall be construed as affecting the jurisdiction or responsibility of any agency or officer of the Government over

any function or organizational unit referred to in such section.

(d) Existing laws, policies, procedures, and directives pertaining to functions covered by this Act, and not inconsistent herewith or repealed hereby, shall remain in full force and effect unless and until superseded or except as they may be amended, under the authority of this Act or under other appropriate authority. Approved September 12, 1950.

Exhibit 37.—Supplement 6, May 10, 1950, to Department Circular No. 655, prescribing regulations relating to delivery of checks and warrants to addresses outside the United States, its Territories and possessions

> TREASURY DEPARTMENT, Washington, May 10, 1950.

Section 211.3 (a) of Department Circular No. 655, dated March 19, 1941 (31 C. F. R. Cum. Suppl. 211.3 (a)), as amended, is hereby further amended to

read as follows:

"The Secetary of the Treasury hereby determines that postal, transportation, or banking facilities in general or local conditions in the Russian Zone of Occupation of Germany; the Russian Sector of Occupation of Berlin, Germany; and in Albania and Bulgaria are such that there is not a reasonable assurance that a payee in those areas will actually receive checks or warrants drawn against funds of the United States, or agencies or instrumentalities thereof, and be able to negotiate the same for full value." Except to the extent they have been authorized by appropriate unrevoked licenses, or are authorized by specific license issued by the Department of Justice, Office of Alien Property, remittances by United States Government agencies from any accounts in which a German or Japanese interest existed on or before December 31, 1946, will continue to be restricted by Executive Order No. 8389, as amended, and rules and regulations issued pursuant thereto, including in particular General Ruling 11A, as amended. Attention is directed to the provisions of Public Law 622, 79th Congress, 2nd session, which prohibits among other things, payments of veterans' benefits to German or Japanese citizens or subjects residing in Germany or Japan.

JOHN W. SNYDER, Secretary of the Treasury.

119, 960, 324

Exhibit 38.—Letter of the Postmaster General to the Secretary of the Treasury certifying extraordinary expenditures contributing to the deficiencies of postal revenues for the fiscal year 1950

Washington, D. C., December 18, 1950.

The Honorable The Secretary of the Treasury.

Dear Mr. Secretary: Pursuant to the provisions of the act of June 9, 1930 (39 U.S. C. 793), embodied in section 18.7, Postal Laws and Regulations of 1948, the amounts set forth below with respect to certain mailings during the fiscal year ended June 30, 1950, as determined under our present system of estimating, are certified to you in order that they may be separately classified on the books of the Treasury Department:

(a) The estimated amount which would have been collected at

(a) The estimated amount which would have been collected at regular rates of postage on matter mailed during the year by officers of the Government (other than those of the Post Office Department) under the penalty privilege including registry fees:

Postage	
Total	\$81, 031, 688
privilege \$1, 366, 370  2. By others under the franking privilege 60, 368	
Total (c) The estimated amount which would have been collected during the year at regular rates of postage on publications going free in	1, 426, 738
the county	799, 368
the year (e) The estimated difference between the postage revenue collected during the year on mailings of newspapers and periodicals published by and in the interests of religious, educational, scientific, philanthropic, agricultural, labor, and fraternal organizations, and	120, 053
that which would have been collected at zone rates of postage	470, 087
service over the postage revenues derived from air mail	36, 112, 390

Grand total___

It has not been the practice to include in item (f) the total cost of handling and transporting air mail. Under the system of estimating used in prior years and followed for 1950 the cost of the items considered amounted to \$137,566,552 for the fiscal year 1950. This estimated amount includes only payments to air carriers (exclusive of \$2,156,962, based on preliminary figures for the fiscal year, paid to air carriers for star route service in Alaska related to other than air mails), personnel costs at air mail fields, and the extra transportation cost involved in getting mail to and from air mail fields. Preliminary figures for the fiscal year 1950 indicate that the total cost of handling and transporting air mail, as determined by Cost Ascertainment procedure, amounted to \$186,288,330. The combined revenue from foreign and domestic air mail was \$101,454,162. This total revenue includes the revenue from both domestic and foreign air parcel post. Sincerely yours,

J. M. Donaldson, Postmaster General.

# TABLES

441

Note.—In tables where figures have been rounded to a specified unit, the components may not necessarily add to totals. Percentages are calculated on unrounded figures.

#### EXPLANATION OF BASES USED IN TABLES

Figures in the following tables are shown on various bases, namely: (1) daily Treasury statements, (2) Public Debt accounts, (3) warrants issued, (4) checks issued, and (5) collections reported by collecting officers.

Daily Treasury statements.—The figures shown in the Daily Statement of the United States Treasury are compiled from the latest daily reports received by the Treasurer of the United States from Government depositaries and Treasury offices holding Government funds. The daily Treasury statement, therefore, is a current report compiled from latest available information, and, by reason of the promptness with which the information is obtained and made public, it has come into general use as reflecting the receipts and expenditures of the Government covering a given period and the condition of the Treasury as it is ascertainable from day to day. The current assets and liabilities of the Treasurer's accounts from day to day. The current assets and nannues of the from are also shown. The figures as shown in current daily Treasury statements are also shown. condition of the Treasury submitted to Congress by the President. Effective with the beginning of the fiscal year 1947 expenditures of the several departments and establishments serviced by the Division of Disbursement, Treasury Department, are reported in the daily Treasury statement on the basis of checks issued. A clearing account is provided to take care of outstanding checks. Beginning July 1, 1948, such expenditures are reported as of the day on which checks are issued in payment of obligations, through the use of teletype facilities.

During the fiscal year 1950, an important change was made in the daily Treasury statement in the method of reporting interest on the public debt. Commencing November 1, 1949, interest on the public debt is reported as an expenditure when such interest becomes due and payable, as distinguished from the previous practice of showing the expenditure on the basis of interest paid by the Treasurer of the United States. In order to take care of the transition in the basis of reporting, the expenditures for interest in the fiscal year 1950 represent not only the interest which became due and payable during that year but also the interest for prior years which had not been presented as of June 30, 1949, for payment by the

Treasurer of the United States.

Public Debt accounts.—On account of the distance of some of the Treasury offices and depositaries from the Treasury, it is obvious that the reports from all offices covering a particular day's transactions cannot be received and assembled in the Treasury at one time without delaying for several days the publication of the daily Treasury statement. It is not practicable to delay the publication of the daily Treasury statement in order to include the latest reports. It is necessary, therefore, in order to exhibit the actual public debt receipts and expenditures for any given fiscal year, to take into consideration those reports covering the transactions toward the end of the fiscal year concerned which have not been received in the Treasury until the succeeding fiscal year, and to eliminate receipts and expenditures relating to the preceding fiscal year. After taking into consideration these reports the revised figures indicate the status of the public debt on the basis of actual transactions during the period under review as reflected by the Public Debt accounts. This is known as "the basis of Public Debt accounts."

Warrants issued (receipts).—Section 305 of the Revised Statutes provides that receipts for all moneys received by the Treasurer of the United States shall be endorsed upon warrants signed by the Secretary of the Treasury, without which warrants, so signed, no acknowledgment for money received into the Public Treasury shall be valid. The issuance of warrants by the Secretary of the Treasury, as provided by law, represents the formal covering of receipts into the

Treasury.

Certificates of deposit covering actual deposits in Treasury offices and depositaries, upon which covering warrants are based, cannot reach the Treasury simultaneously, and for that reason all receipts for a fiscal year cannot be covered into the Treasury by warrants of the Secretary immediately upon the close

of that fiscal year. It is necessary to have all certificates of deposit before a statement can be issued showing the total receipts for a particular fiscal year on a warrant basis. The figures thus compiled and contained in this report are on a warrants-issued basis. Table 2 for years prior to 1916 shows receipts on this basis.

Warrants issued (expenditures).—The Constitution of the United States provides that no money shall be drawn from the Treasury but in consequence of appropriations made by law. Section 305 of the Revised Statutes requires that the Treasurer of the United States shall disburse the moneys of the United States upon warrants drawn by the Secretary of the Treasury. As the warrants are issued by the Secretary they are charged against the appropriate appropriations provided by law. Some of these warrants do not represent actual payments to claimants, but are merely advances of funds to be placed to the credit of disbursing officers of the Government with the Treasurer of the United States for the payment of Government obligations. The disbursing officer then issues his check on the Treasurer in payment of such obligations. As far as the appropriation accounts are concerned, the warrants issued and charged thereto constitute expenditures, but it will be observed that such expenditures necessarily include unexpended balances to the credit of the disbursing officers.

Checks issued (expenditures).—This basis, more than any other, reflects the real expenditures of the Government. Expenditures for a given fiscal year on

Checks issued (expenditures).—This basis, more than any other, reflects the real expenditures of the Government. Expenditures for a given fiscal year on the basis of checks issued differ from the corresponding figures on the basis of warrants in that the former include expenditures made by disbursing officers from credits granted during the previous fiscal year, and exclude the amount of unexpended balances remaining to their credit at the end of the fiscal year. A detailed explanation of the basis of checks issued will be found on page 89 of the

Secretary's report for 1927.

Collections reported by collecting officers (receipts).—Statements showing receipts on a collection basis are compiled from reports received by the various administrative offices from collecting officers in the field, such as collectors of internal revenue and collectors of customs. These reports cover the collections actually made by these officers during the period specified. The collections are then deposited in a designated Government depositary to the credit of the Treasurer of the United States, and the depositary renders a report to the Treasurer. Effective January 1, 1950, a revision was made in the accounting for deposits of income taxes withheld under the Withholding Tax Act of 1943 and social security taxes withheld under the Federal Insurance Contributions Act. This revision provided for the covering into the Treasury of both types of withholdings so that the Federal old-age and survivors insurance trust fund would benefit by the earlier deposit of social security taxes. These deposits, which are made directly with depositaries and not recorded by collectors of internal revenue until quarterly tax returns are filed, are included in statements of receipts on a collection basis as receipts of the Secretary of the Treasury in the fiscal year in which deposited and as receipts of the collectors in the fiscal year in which returns The reports of the collecting officers and the receipts on a covering warrant basis do not coincide for the reasons that the collecting officers make collections during the last few days of the fiscal year which are not deposited until after the close of the fiscal year and because withheld taxes are deposited directly in depositaries in advance of receipts submitted to the collectors with The receipts are reported on a collection basis merely for statistical purposes and to furnish information as to detailed sources of revenue. fication of such items on the basis of deposits has been found to be impracticable and uneconomical. Table 7 shows receipts on the basis of reports of collectors of internal revenue.

# DESCRIPTION OF ACCOUNTS THROUGH WHICH TREASURY OPERATIONS ARE EFFECTED

All receipts of the Government are covered into the general fund of the Treasury from which all expenditures are made. Receipts and expenditures, however, are classified in the Treasury's records according to the class of accounts through which operations are effected. Transactions are segregated in order to exhibit separately those effected through general and special accounts, as contrasted with those effected through trust accounts. This classification was first shown for the warrants and checks-issued bases and on the daily Treasury statements beginning with the July 1, 1933, issue, in order to conform to the practice of the Bureau of the Budget. In some tables in this report, however, transactions in

TABLES 445

the three types of accounts are combined for purposes of historical comparison. A brief general explanation of the three classes of accounts is presented below.

General accounts.—The principal sources of general account receipts are income taxes, miscellaneous internal revenue, social security taxes, taxes upon carriers and their employees, and customs duties. In addition, a large number of miscellaneous receipts come under this head, including such items as proceeds of Government-owned securities (except those which are applicable to public debt retirement), sale of surplus and condemned property, Panama Canal tolls, fees (including consular and passport fees), fines, penalties, forfeitures, rentals, royalties, reimbursements, immigration head tax, sale of public land, seigniorage on coinage of subsidiary silver and minor coins, etc. Moneys represented in the general accounts may be withdrawn from the Treasury only in pursuance of appropriations made by Congress. There are five classes of appropriations payable through the general accounts of the Treasury, namely: (a) One-year, which are available for incurring obligations for a definite period in excess of one fiscal year; (c) continuing (no year), which are available for incurring obligations until exhausted or until the object for which appropriated has been accomplished; (d) permanent-specific, which are fixed amounts provided for each of a series of years by permanent legislation, without annual action of Congress; and (e) permanent-indefinite, which are indefinite amounts (so much as may be necessary) provided by permanent legislation without annual action of Congress, such as the indefinite appropriation to cover interest on the public debt.

A statement of general account receipts and expenditures is, therefore, in the nature of a general operating statement, and gives a picture of the relationship between the general revenues of the Government and the operating expenditures

(including capital outlays and fixed charges) chargeable against them.

Special accounts.—Special account receipts may be generally defined as funds received under special authorizations of law which may be expended only for the particular purposes specified therein. Special account receipts may not be used for the general expenditures of the Government. The more important items of receipts included under this heading, from the standpoint of amounts other than those applicable to the retirement of the public debt are the reclamation fund, Alaska Railroad fund, and Mineral Leasing Act under the Department of the Interior; and the national forest funds under the Department of Agriculture. There are many other special account receipts of lesser importance. Details of these accounts, which are summarized under miscellaneous receipts in table 116, are given in the Combined Statement of Receipts, Expenditures, and Balances.

Trust accounts.—Trust account receipts represent moneys received by the Government for the benefit of individuals or classes of individuals and are used for purposes specified in the trust. Moneys held in trust, being payable to or for the use of beneficiaries only, are not available for general expenditures of the Government. There are several classes of trust account receipts, the beneficiaries under which may be either individuals or groups of individuals. The accounts may represent (a) moneys received directly from or for account of individuals, as in the case of moneys received from foreign governments or other sources in trust for citizens of the United States or others under the act of February 27, 1896; (b) moneys collected as revenues and held in trust, such as the proceeds of sales of Indian lands which are held as interest-bearing funds for the benefit of Indian tribes; (c) proceeds of grants from the general accounts of the Treasury in pursuance of treaty or other obligations such as the perpetual trust fund created for the Ute Indians under section 5 of the act of June 15, 1880; (d) deposits, donations, or contributions for specified purposes, such as funds received for the purchase of lands in the national parks; and (e) deposits to be held until appropriate disposition thereof can be made, such as proceeds from the redemption of bonds found and whose owners are unknown.

tion of bonds found and whose owners are unknown.

Checking accounts of Government corporations.—Commencing with the fiscal year 1947, the practice of reporting net operations of wholly owned Government corporations and certain other business-type activities on page 3 of the daily Treasury statement was discontinued and since then such transactions (except sales or redemptions of their obligations in the market) have been included in budget expenditures on page 2 of the daily Treasury statement. Expenditures for corporations, the disbursements of which are not handled by the Division of Disbursement, Treasury Department, are included in the daily Treasury statement on the basis of checks paid by the Treasurer of the United States.

r Revised to adjust receipts and expenditures in the amount of \$40,561,887 representing refunds of receipts during 1938 not previously included with adjustments referred to in footnote 3 below.

1 duaranteed obligations for 1934-39 on basis of Public Debt accounts, and for 1940 and subsequent years on basis of daily Treasury statements. Excludes guaranteed obligations held by the Treasury.

2 Total budget receipts less amounts appropriated to Federal old-age and survivors insurance trust fund and refunds of receipts. See also footnote 3.

3 Effective Jan. 3, 1949, amounts refunded by the Government, principally for the overpayment of taxes, are being reported as deductions from total receipts rather than as expeditures. Also offective Mult.

are being reported as deductions from total receipts rather than as expenditures. Also, effective July 1, 1948, payments to the Treasury, principally by wholly owned Government corporations for retirement of capital stock and for disposition of earnings, have been excluded in reporting both budget receipts and expenditures. Neither of these changes affects the size of the budget surplus or deficit. Prior year figures

capital stock and for disposition of earnings, nave open excluded in reporting over duages coupled expenditures. Neither of these changes affects the size of the budget surplus or deficit. Prior year figures have been adjusted accordingly for comparative purposes.

4 Figures exclude amounts for public debt retirements which are chargeable to the sinking fund, etc., under special provisions of law; and include expenditures for "Government corporations (wholly owned), etc. (net)."

6 Comprises trust accounts; sales and redemptions of securities of Government corporations, etc., in the market (net); increment on gold; seigniorage on silver; and uniscellaneous funds and accounts. Figures exclude retirement of national bank notes chargeable against increment on gold (fiscal years 1935-39).

6 Clearing account for outstanding checks and interest coupons, and telegraphic reports from Federa Reserve Banks; excess of receipts, or expenditures (—).

⁷ Sec. 114 (f) of the Economic Cooperation Act of 1948, approved Apr. 3, 1948, required that the sum of \$3,000,000,000 be transferred to a trust fund entitled "Foreign Economic Cooperation Trust Fund," and "considered as expended during the fiscal year 1948, for the purpose of reporting governmental expenditures." The effect of this was to charge the budget in the fiscal year 1948 for expenditures made in the fiscal year 1949, with consequent effect on the budget surplus or deficit of those years. This bookkeeping transaction had no effect on the actual timing of either receipts or expenditures. In order to simplify comparison of figures between years, the transactions shown in this table do not take into account the transfer of \$3,000,000,000 in the fiscal year 1949 from the Foreign Economic Cooperation trust fund; expenditures of \$3,000,000,000 during the fiscal year 1949 from the Foreign Economic Cooperation trust fund are treated as budget expenditures in this table. If effect is given to sec. 114 (f) of the Economic Cooperation Act of 1948, the budget results for the fiscal years 1948 and 1949 would be as follows:

Fiscal year 1948

Fiscal year 1948

NOTE.—For postal receipts and expenditures, see table 10.

1 From 1789 to 1842 the fiscal year ended Dec. 31; from 1844 to date, on June 30. Figures for 1843 are for a

¹ From 1780 to 1842 the fiscal year ended Dec. 31; from 1844 to date, on June 30. Figures for 1843 are for a half year, Jan. 1 to June 30.

² Comprises railroad unemployment insurance contributions, proceeds of Government-owned securities, Panama Canal tolls, etc., proceeds from sales of surplus property (act Oct. 3, 1944), deposits resulting from renegotiation of war contracts (see table 5), seigniorage, and other miscellaneous.

³ Effective Jan. 3, 1949, amounts refunded by the Government, principally for the overpayment of taxes, are being reported as deductions from total receipts rather than as expenditures. Also, effective July 1, 1948, payments to the Treasury, principally by wholly owned Government corporations for retirement of capital stock and for disposition of earnings, have been excluded in reporting both budget receipts and expenditures. Neither of these changes affects the size of the budget surplus or deficit. Prior year figures, beginning with the fiscal year 1931, have been adjusted accordingly for comparative purposes. The amounts that have been adjusted on account of refunds of receipts and capital transfers for the fiscal years 1931 through 1948 are as follows:

	., 220 00 1020	Refunds of receipts	Capital t <b>r</b> ansfers		Refunds of receipts	Capital transfers
	1931	\$74, 081, 709		1940	\$78, 704, 895	\$43, 756, 731
	1932	81, 812, 320		1941	80, 189, 469	299, 741, 000
	1933	58, 483, 799		1942	84, 775, 537	18,000,000
•	1934	51, 286, 138		1943	70, 325, 408	9, 815, 514
	1935	70, 553, 357		1944	257, 254, 269	
	1936	47, 019, 926		1945	1, 678, 777, 924	16, 167, 609

³ Excludes civil expenditures under War and Navy Departments in Washington through 1915. Subsequent to 1915 includes all expenditures made by the Department of the Army (including rivers and harbors and Panama Canal) and the Department of the Navy.

⁶ Title was changed pursuant to act of July 26, 1947. Figures for Department of the Army include expenditures of Department of the Air Force from funds made available prior to fiscal year 1949. Expenditures for Office of the Secretary of Defense are included in "All other."

⁷ Includes civil expenditures under War and Navy Departments in Washington through 1915; expenditures of Office of Secretary of Defense; unavailable funds charged off under act of June 3, 1922 (42 Stat. 1592); and expenditures for "Government corporations (wholly owned), etc. (net)".

⁸ The practice of including statutory debt retirements in budget expenditures was discontinued effective with fiscal year 1948. Such expenditures are not included in this table, nor does the "Surplus or deficit" take into account such expenditures. Table 25 shows details of statutory debt retirements.

⁸ Beginning with 1932, tonnage tax has been covered into Treasury as miscellaneous receipts included in "Other receipts."

"Other receipts."

10 Expenditures for the Department of the Air Force formerly included under Department of the Army.

PExpenditures for the Department of the Air Force formerly included under Department of the Army. See table 3, footnote 8.
"I Sec. 114 (f) of the Economic Cooperation Act of 1948, approved Apr. 3, 1948, required that the sum of \$3,000,000,000 be transferred to a trust fund entitled "Foreign Economic Cooperation Trust Fund" and "considered as expended during the fiscal year 1948, for the purpose of reporting governmental expenditures." The effect of this was to charge the budget in the fiscal year 1948 for expenditures made in the fiscal year 1949, with consequent effect on the budget surplus or deficit of those years. This bookkeeping transaction had no effect on the actual timing of either receipts or expenditures. In order to simplify comparison of figures between years, the transactions shown in this table do not take into account the transfer of \$3,000,000,000 during the fiscal year 1948 from the Foreign Economic Cooperation trust fund; expenditures of \$3,000,000,000 during the fiscal year 1949 from the Foreign Economic Cooperation trust fund are treated as budget expenditures in this table. If effect is given to sec. 114 (f) of the Economic Cooperation Act of 1948, the budget results for the fiscal years 1948 and 1949 would be a Fiscal year 1948.

a Counter-entry receipts (deduct). b Counter-entry (add).

· Excess of credits (deduct).

1 Includes \$49,903,074.56 adjustment in December 1949 and \$2,255,767.27 adjustment in January 1950 on account of Farmers' Home Administration loan collections, treated during the period July 1-December 31, 1949, as reductions in expenditures of Farmers' Home Administration.

² Represents appropriations equal to "Social security—employment taxes" collected and deposited as provided under sec. 201 (a) of the Social Security Act Amendments of 1939.

³ Includes \$20,677,589.31 on account of retirement of capital stock, Federal Deposit Insurance Corporation.

• Expenditures are "net," after allowance for reimbursements to appropriations, receipts of revolving fund appropriations, and receipts credited to disbursing accounts of

corporations and agencies having authority to use collections without formal covering into the Treasury. When such credits exceed expenditures the items are indicated by the prefix "c." Sales and redemptions in the market of obligations of Government corporations are shown in table 4.

5 See footnote 1.

See roomote 1.
 Reorganization Plan No. 21, effective May 24, 1950, abolished the United States Maritime Commission and transferred its functions to the Department of Commerce.
 Included under applicable services prior to fiscal year 1950.
 Certain expenditures on behalf of the Department of the Air Force which are still being made out of appropriations to the Department of the Army are included in the expenditures of the latter Department.

 Administrative expenses in carrying out provisions of act are included under "Other."
 Expenditures for 1949 include \$3,000,000,000 expended from Foreign Economic Cooperation trust fund.

"Pursuant to the President's Reorganization Plan No. 2, effective August 19, 1949, the United States Employment Service was transferred from "Federal Security Agency: Social Security Administration" to "Labor Department."

12 Effective January 1, 1950, certain administrative functions of the General Services Administration were consolidated pursuant to section 106 of Public Law 152, approved June 30, 1949, and appropriated funds relating to such functions were transferred to and combined in one operating account. Accordingly, the classification has been revised to show the rearrangement of functions.

18 Revised to adjust classification.

14 Does not include expenditures from direct appropriations for expenses of disposal in

toreign areas

16 Commencing November 1, 1949, interest on the public debt is reported as an expenditure when such interest becomes due and payable, as distinguished from the previous

practice of showing the expenditure on the basis of interest paid by the Treasury of the United States. In order to take care of the transition in the basis of reporting, the expenditures for interest in 1950 will represent not only the interest which becomes due and payable during that year but also the interest for prior years which had not yet been presented as of June 30, 1949, for payment by the Treasurer of the United States, amounting to \$224,676,576,25.

in The accounts for which special issues are held are shown in the Monthly Public Debt Statement, appearing on pages 5, 8, and 9 of the Daily Statement of the United States Treasury, for the first business day of each month. Some of such accounts also hold marketable obligations, the interest on which is included in public issues on the line above.

"Represents judgments, and damage claims not payable under Tort Claims Act, effective June 1949, which for prior year periods are included with expenditures of the depart-

ment or agency involved.

TABLE 4.—Trust accounts, etc., receipts and expenditures, in detail, monthly for fiscal year 1950 and totals for 1949 and 1950 [On basis of daily Treasury statements, see p. 443]

a Counter-entry receipts (deduct).

b Excess of redemptions (deduct).

c Excess of credits (deduct). 1 Includes transactions of the Alaska Railroad and Canal Zone retirement funds which were abolished and combined with the civil service retirement fund by Public Law 180, approved July 21, 1949.

² Represents appropriations equal to "Social security—employment taxes" collected and deposited as provided under sec. 201 (a) of the Social Security Act Amendments of 1939.

³ This item of seigniorage represents the difference between the cost value and the monetary value of silver bullion revalued and held to secure the silver certificates issued on account of silver acquired under the Silver Purchase Act of 1934.

Represents reimbursement for certain administrative expenses met out of general fund appropriations.

Reduced by repayments on account of accrued interest or premium purchased.
 Represents transfer from the railroad unemployment insurance account to railroad

^{*}Represents transfer from the railroad unemployment insurance account to railroad unemployment insurance contributions for administrative expenses, to adjust funds available for administrative expenses on account of retroactive credits taken by contributors under act approved June 23, 1948, as amended (45 U.S. C. 358 (a)).

*This clearing account for outstanding checks, outstanding unpaid interest on the public debt, and telegraphic reports, is used to enable the Treasurer to classify expenditures immediately upon the receipt of advice concerning the issuance of checks by the various disbursing officers of the Treasury Department and advice relating to interest on the public debt becoming due and payable, and also to enable the Treasurer to reflect transactions in cash assets on the basis of telegraphic reports received from Federal Reserve Banks. When the Bank transcripts are received, the items involved are cleared from this aecount.

# 480 1950 REPORT OF THE SECRETARY OF THE TREASURY

Note.—More detail on current expenditures is shown in table 3. r Revised.

Less than \$500,000.

* Less than \$500,000.

¹ Expenditures exclude amounts for public debt retirement which are chargeable to the sinking fund, etc., under special provisions of law. Expenditures include transfers to trust accounts and net expenditures of wholly owned Government corporations, etc., under appropriate classifications, except payments to the Treasury as explained in footnote 2.

² Amounts refunded by Government are reported as deductions from total receipts. Both receipts and expenditures exclude payments to the Treasury, principally by wholly owned Government corporations for retirement of capital stock and for disposition of earnings. (See also table 2, footnote 3.)

³ Includes so-called voluntary returns.

⁴ Represents appropriations equal to "Social security—employment taxes" collected and deposited as provided under section 201 (a) of the Social Security Act Amendments of 1939.

⁵ Excludes interest on refunds, which is included under "Other expenditures: Miscellaneous."

⁵ Department of the Army expenditures include those on behalf of Department of the Air Force which are made out of appropriations to Department of the Army, but exclude, principally, expenditures for government and relief in occupied areas, Greek-Turkish assistance, UNRRA, surplus property disposal overseas, other international finance and aid, payments under Armed Forces Leave Act, river and harbor work and flood control, and Panama Canal. (See also footnotes 14 and 16.) Department of the Navy expenditures exclude, principally, those for Greek-Turkish assistance, payments under Armed Forces Leave Act, surplus property disposal overseas, and UNRRA.

¹ Effective Sept. 1, 1946, expenditures of War Shipping Administration are included with expenditures of U. S. Maritime Commission. In 1950 all expenditures for the Commission are included under "Other expenditures: Miscellaneous."

penditures: Miscellaneous."

Penditures: Miscellaneous."

§ Expenditures of Reconstruction Finance Corporation and affiliates for activities other than national defense and related activities are included under "Other expenditures: Miscellaneous." National defense and related activities expenditures for 1948 and thereafter are not segregated from other expenditures.

§ Beginning July 1, 1946, consists of expenditures for Office of Selective Service Records and National Advisory Committee for Aeronautics; beginning March 1948, expenditures for Office of Secretary of Defense also are included.

§§ To simplify comparison of figures, transactions relating to the Foreign Economic Cooperation trust fund, established under section 114 (f) of the Economic Cooperation Act of 1948 (62 Stat. 150) have been consolidated with budget expenditures.

Pl Commencing Nov. 1, 1949, interest on the public deht is reported as an expenditure when such interest becomes due and payable, as distinguished from the previous practice of showing the expenditure on the basis of interest paid by the Treasurer of the United States.

Pl Comprises Department of Agriculture expenditures, except those for UNRRA, surplus property disposal, other national defense and related activities prior to July 1947; international finance and aid; and forest roads and trails, included under "Public works" in this table.

Pl Comprises budget expenditures under Social Security, Railroad Retirement, and Railroad Unemployment Insurance Acts.

¹³ Comprises budget expenditures under Social Security, Railroad Retirement, and Railroad Unemployment Insurance Acts.
¹⁴ Consists of expenditures for the following: Public roads, except assistance to Greece and Turkey; public buildings, consisting of construction only, beginning with July 1949; and Bureau of Community Facilities (these three categories of expenditures having been under the Federal Works Agency until it was abolished by Public Law 162, approved June 30, 1949); Bureau of Reclamation; Tennessee Valley Authority; river and harbor work and flood control under the Department of the Army; and floots roads and trails under the Department of Agriculture. Prior to July 1949, included all other Federal Works Agency expenditures except those included under national delense and related activities.
¹³ Comprises expenditures of Civil Works Administration, Work Projects Administration, National Youth Administration, and Civilian Conservation Corps.
¹⁵ Includes expenditures for executive departments not included elsewhere (including interest on refunds) and for legislative and judicial functions; Government contributions to Federal employees' retirement; Civil Aeronautics; Panama Canal, except war expenditures; Post Office deficiency; and other miscellaneous.

^{*} Less than \$500,000.

1 Figures are stated in accordance with classifications in daily Treasury statement beginning Dec. 1, 1947. Reimbursements for those administrative expenses which are not paid directly from Federal old-age and survivors insurance trust fund (cost of collecting employment taxes, etc.) are classified as trust fund expenditures rather than as deductions from trust fund receipts.

2 Consists of Alaska Railroad, Canal Zone, civil service, and foreign service retirement funds.

3 Comprises District of Columbia, Indian tribal funds, insular possessions, increment resulting from reduction in weight of gold dollar, seigniorage on silver, etc.

4 Does not include transactions under the Foreign Economic Cooperation trust fund. See table 1, footnote 7.

note 7.

Somprises District of Columbia, Indian tribal funds, mutual defense assistance, expenditures chargeable against increment on gold, etc.

Bee footnote 1.

Note.—Figures in this table, which are on a collection basis, differ generally from figures on the daily Treasury statement basis because the latter are compiled from daily reports from depositaries and offices holding Government funds, whereas collection basis figures are compiled from reports received from collectors of internal revenue. Beginning with the fiscal year 1950, there are included with the latter, on a collection basis, deposits of withheld taxes made directly with depositaries. Amounts reported by collectors and depositaries do not coincide usually because collections made in the last few days of the fiscal year are not deposited until after its close and because certain withheld taxes are paid directly into designated Federal depositaries. Figures in this table agree in most instances with those on the warrants-issued basis in the annual Treasury publication, the Combined Statement of Receipts, Expenditures and Balances of the United States Government, with the exception of certain withheld income taxes received by Federal Reserve Banks and not cleared by collectors of internal revenue. Further explanation of bases of figures appears on p. 443.

Specific differences between this table and the other statements occur as follows. Individual income taxes on the collection basis and in the Combined Statement include collections from the Victory tax, which also was a withholding tax; but the daily Treasury statement includes Victory tax receipts under "Income tax: Other." Another difference is that collections of "Miscellaneous internal revenue" include taxes collected on firearms, shells, and cartridges under section 3407 of the Internal Revenue Code; whereas these collections and also the collections of the hydraulic mining tax are shown in the daily Treasury statement first as "Miscellaneous internal revenue" but subsequently they are transferred into special accounts under "Miscellaneous receipts." The figures in this table for 1935 and subsequent years, with the exception mentioned in footnote 3, exclude collections for credit to specified trust accounts for creatin island possessions, etc. These

trust account collections are shown in the appropriate trust accounts in the daily Treasury statement and in the Combined Statement.

Beginning with 1948 the figures for repealed taxes except those shown separately in this table have been placed under "Miscellaneous taxes: All other."

- Less than \$500.
- ¹ For figures for 1863-1915, see 1929 annual report, p. 419; and for 1916-28, see 1947 annual report, p. 310.
- Includes collections from Victory tax.
- Includes income tax on Alaska Railroad except for 1935, 1936, and 1937, when these collections were credited to trust accounts.
- 4 Includes unjust enrichment tax through 1947.
- Originally schedule A, act of Oct. 22, 1914; includes also foreign insurance policies and passage tickets (the latter repealed Apr. 1, 1947).
- 6 Includes taxes on sales under act of Oct. 22, 1914; manufacturers', consumers', and dealers' excise taxes under war revenue and subsequent acts; and for 1932 and subsequent years, manufacturers' excise taxes under act of 1932, as amended. Soft drink taxes are included under "Miscellaneous taxes: All other."
- 'Included under "Miscellaneous taxes: All other."
- * Includes collections from sources other than the miscellaneous taxes shown, and also (a) certain delinquent taxes collected under repealed laws, except automobile taxes for 1929 and 1930 which are included under "Manufacturers' excise taxes: All other," and capital stock taxes for 1929 and 1930 which are shown under "Capital stock"; (b) internal revenue collected through customs offices for 1929-33; subsequently such collections are included with "Distilled spirits"; (c) dividends and soft drink taxes; (d) taxes paid by manufacturers of and dealers in adulterated and process or renovated butter, mixed flour, and filled cheese; and (e) repealed taxes not separately shown.

¹ For figures from 1789 through 1910, see Secretary's annual report for 1946, p. 419.
² Postal expenditures include adjusted losses, etc.—postal funds and expenditures from postal balances, but are exclusive of departmental expenditures in Washington, D. C., to the close of fiscal year 1922, and amounts transferred to the civil service retirement and disability fund, fiscal years 1921 to 1926, inclusive. For 1927 and subsequent years salary deductions are included in "Postal expenditures," the deductions having been paid to and deposited by disbursing clerks for credit of the retirement fund.
³ See explanation in exhibit 38.
⁴ On basis of warrants issued for 1914 and 1915, and on basis of daily Treasury statements from 1916 to date.
⁵ On basis of warrants issued prior to 1922 and on basis of daily Treasury statements from 1916 to date.
⁵ On basis of warrants issued prior to 1922 and on basis of daily Treasury statements from 1916 to date.
⁵ On basis of warrants issued prior to 1922 and on basis of daily Treasury statements from 1916 to date.
⁵ On basis of warrants issued prior to 1922 and on basis of daily Treasury statements from 1916 to date.
⁵ On basis of warrants issued prior to 1922 and on basis of daily Treasury statements from 1916 to date.
⁵ On basis of warrants issued prior to 1922 and thereafter.
Represents advances from the general fund of the Treasury to the Postmester General to meet deficiencies in the postal revenues.
These figures do not include any allowances for offsets on account of extraordinary expenditures or the cost of free mailings contributing to the deficiency of postal revenues certified to the Secretary of the Treasury by the Postmaster General pursuant to the act of Congress approved June 9, 1930. Excludes amounts transferred to the civil service retirement and disability fund under act of May 22, 1930 (41 Stat. 614), and amendments thereto on account of salary deductions of 2½ percent, as follows: 1921, \$6,519,683.69; 1922, \$7,899,006.28; 1923, \$8,284,081.00; 1924, \$8,679,658.60;

Revised in accordance with Bureau of the Census estimated population for continental United States

Treasury.

^{*}Revised in accordance with Bureau of the Census estimated population for continental United States as of July 1.

1 The outstanding principal of the public debt for the years 1790-1852, except for 1835, are taken from the annual report of the Secretary for 1909; the 1835 figure is taken from the annual reports of the Secretary for 1834-35, pp. 504 and 629. The detailed figures for 1790-1852 are not available on a basis comparable to those of subsequent years. Figures for 1853-55 are taken from the "Statement of Receipts and Expenditures of the Government from 1855 to 1885 and Principal of Public Debt from 1791 to 1885," compiled from the official records of the Register's office. From 1886-1919 the figures are taken from the monthly debt statements and revised figures published in the annual reports of the Secretary of the Treasury. From 1920 to date, the figures are taken from the Statement of the Public Debt published in the daily Treasury statements. From 1890-1842 the fiscal year ended December 31; and from 1843 to date the fiscal year ended June 30.

3 Exclusive of the bonds issued to the Pacific railways (provision having been made by law to secure the Treasury against both principal and interest) and the Navy pension fund (which was in no sense a debt, the principal being the property of the United States).

3 Includes old demand notes; United States notes (gold reserve deducted since 1900); postal currency and fractional currency less the amounts officially estimated to have been destroyed; deposits held by the Treasury for the retirement of Federal Reserve Bank notes, and for national bank notes of national banks failed, in liquidation, and reducing circulation, which prior to 1890 were not included in the published debt statements; and also special notes of U. S. issued to International Bank for Reconstruction and Development and International Monetary Fund. Does not include gold, silver, or currency certificates, or Treasury notes of 1880 for redemption of which an exact equivalent of the respective

Note.—Gross public debt on basis of daily Treasury statements. Guaranteed obligations from 1934 through 1939 on basis of Public Debt accounts, and for 1940 and subsequent years on basis of daily Treasury statements.

year.

r Revised in accordance with Bureau of the Census estimated population for continental United States as of July 1.

1 Consists of obligations issued by certain Government corporations and credit agencies, obligations which are guaranteed by the United States as to both principal and interest. They were first authorized in 1932, but no such obligations were outstanding at the end of the fiscal years 1932 and 1933.

2 Based on Bureau of the Census estimated population for continental United States as of July 1 of each

Note. -- For information on composition of public debt beginning June 30, 1916, see 1947 annual report, p. 361.

¹ For explanation, see table 115, footnote 5.
² See footnote 3.
² See footnote 3.
² Includes special issues transferred from Canal Zone retirement fund and Alaska Railroad retirement fund pursuant to Public Law 180, 81st Congress, approved July 21, 1949.
□ Digitized for FRA Casales of these stamps commenced May 1, 1941, as a special defense series of postal savings stamps, which were obligations of Postal Savings System. Beginning Oct. 1, 1942, this http://fraser.s/perialseries/was replaced by a Treasury issue of United States war savings stamps, and all outstanding stamps became public debt obligations.

Table 14.—Guaranteed obligations held outside the Treasury,¹ classified by issuing Government corporations and other business-type activities,

bTreasury bills are noninterest-bearing and are sold on a discount basis on competitive bids for each issue. The average sale price of these series gives an approximate yield on a bank discount basis (360 days a year) as indicated opposite each issue of bills. This yield differs slightly from the yield on a true discount basis (365 days a year) which is shown in summary table 16.

Redeemable, at par and accrued interest, to date of payment, at any time upon the death of the owner at the option of the duly constituted representative of the deceased owner's estate, provided entire proceeds of redemption are applied to payments of the Federal estate taxes due from deceased owner's estate.

Amounts issued and retired for Series D to F, inclusive, include accrued discount; amounts outstanding are stated at current redemption values. Amounts issued, retired, and outstanding for Series G are stated at par value.

8 Deduct.

• For detailed information and amounts outstanding June 30, 1929, see table 24 in annual report for 1929, p. 456.

10 Includes amounts authorized to be outstanding at present time and amounts issued on deposits including reissues.

11 After deducting amounts officially estimated to have been lost or irrevocably destroyed.

11 For summary on basis of daily Treasury statement, see table 16.

#### TAX EXEMPTIONS:

a Any income derived from Treasury bills, whether interest or gain from their sale or other disposition, does not have any exemption, as such, and loss from the sale or other disposition of any such bills does not have any special treatment, as such, under the Internal Revenue Code or laws amendatory or supplementary thereto. The bills are subject to estate, inheritance, gift, or other excise taxes whether Federal or State, but are exempt from all taxation, now or bereafter imposed on the principal or interest thereof by any State, or any of the possessions of the United States, or by any local taxing authority. For purposes of taxation the amount of discount at which the bills are originally sold by the United States is to be considered to be interest.

b Income derived from these securities is subject to all taxes now or hereafter imposed under the Internal Revenue Code or laws amendatory or supplementary thereto. The securities are subject to estate, inheritance, gift, or other excise taxes, whether Federal or State, but are exempt from all taxation now or hereafter imposed on the principal or interest thereof by any State, or any of the possessions of the United States, or by any local taxing authority. The following is applicable to savings bonds only: For the purposes of taxation any increment in value of savings bonds represented by the difference between the price paid and the redemption value received (whether at or before maturity) shall be considered as interest.

Attention is invited to Treasury Decision 4550, ruling that bonds, notes, bills, and

certificates of indebtedness of the Federal Government or its agencies, and the interest thereon, are not exempt from the gift tax.

c Exempt, both as to principal and interest, from all taxation now or hereafter imposed by the United States, any State, or any of the possessions of the United States, or by any local taxing authority, except (a) estate or inheritance taxes, and (b) graduated additional income taxes, commonly known as surtaxes, and excess profits and war profits taxes, now or hereafter imposed by the United States, upon the income or profits of individuals, partnerships, associations, or corporations. The interest on an amount of bonds authorized by the act approved Sept. 24, 1917, as amended, the principal of which does not exceed in the aggregate \$5,000 owned by any individual, partnership, association, or corporation, shall be exempt from the taxes provided for in clause (b) above. The following is applicable to savings bonds only: For the purposes of determining taxes and tax exemptions the increment in value of savings bonds represented by the difference between the price paid and the redemption value received (whether at or before maturity) shall be considered as interest.

d Exempt from the payment of all taxes or duties of the United States, as well as from all taxation in any form by or under State, municipal, or local authority. (The Supreme Court has hold that this exemption does not extend to estate or inheritance taxes imposed

by Federal or State authority.)

• Interest on these bonds is subject to all taxes now or hereafter imposed under the Internal Revenue Code or laws amendatory or supplementary thereto. Principal is exempt from taxation.

f These issues being investments of various Government funds and payable only for the account of such funds have no present tax liability.

In hands of foreign holders.—Applicable only to securities issued prior to Mar. 1, 1941: Bonds, notes, and certificates of indebtedness of the United States shall, while beneficially owned by a nonresident alien individual, or a foreign corporation, partnership, or association not engaged in business in the United States, be exempt both as to principal and interest from any and all taxation now or hereafter imposed by the United States, any State, or any of the possessions of the United States, or by any local taxing authority.

3 Does not include accrued interest.

Income derived from these securities is subject to all Federal taxes, now or hereafter imposed. Securities are subject to surfaxes, estate, inheritance, gift, or other excise taxes, whether Federal or State, but are exempt from all taxation now or hereafter imposed on principal or interest thereof by any State, municipality, or local taxing authority.

Represents drafts and invoices as of May 31, 1950, paid by commercial banks for

account of Commodity Credit Corporation.

National Housing Act as amended by National Housing Act Amendments of 1938, approved Feb. 3,1938, reads in part as follows: "Such debentures as are issued in exchange for property covered by mortgages insured under sec. 203 or sec. 207 prior to the date of enactment of the National Housing Act Amendments of 1938 shall be subject only to such Federal, State, and local taxes as the mortgages in exchange for which they are issued would be subject to in the hands of the holder of the debentures. * * Such debentures as are issued in exchange for property covered by mortgages insured after the date of enactment of the National Housing Act Amendments of 1938 shall be exempt, both as to principal and interest, from all taxation (except surtaxes, estate, inheritance, and gift taxes) now or hereafter imposed by the United States, by any Territory, dependency, or possession thereof, or by any State, county, municipality or local taxing authority."

Under Public Debt Act of 1941 interest upon and gain from sale of debentures shall have no exemption under Federal tax acts now or hereafter enacted, except such debentures as may be issued on contracts entered into prior to Mar. 1, 1941.

⁷ Payable 3 years after the first day of July following the maturity date of the mortgage

for which each debenture was issued.

8 Redeemable on any interest day or days, on 3 months' notice.

With reference to debentures issued prior to Mar. 1, 1941, in name of housing insurance fund, the National Housing Act Amendments of 1938, approved Feb. 3, 1938, states that "Such debentures as are issued in exchange for mortgages insured after the date of enactment of the National Housing Act Amendments of 1938 shall be exempt, both as to principal and interest, from all taxation (except surtaxes, estate, inheritance, and gift taxes) now or hereafter imposed by the United States, by any Territory, dependency, or possession thereof, or by any State, county, municipality, or local taxing authority." Under Public Debt Act of 1941 interest upon and gain from sale of debentures shall have no exemption under Federal tax acts now or hereafter enacted, except such debentures as may be issued on contracts entered into prior to Mar. 1, 1941.

10 Funds have been deposited with Treasurer of the United States for payment of out-

standing matured principal and interest.

11 Amount outstanding on basis of Public Debt accounts is shown in table 16.

Amounts issued and redeemed for Series D to F bonds include issue price plus accrued discount; amounts outstanding are stated at current redemption value. Amounts issued, retired, and outstanding for Series G bonds are stated at par value.
 Deduct.
 Includes special issues transferred from Canal Zone retirement fund and Alaska

Railroad retirement fund pursuant to Public Law 180, approved July 21, 1949.

4 Interest compounded.

5 Represents issues on which there were no transactions during years 1930-50; for amount of each issue outstanding (unchanged since June 30, 1929), see 1929 amount report, p. 478.

Digitized for FRASER

¹ On basis of daily Treasury statements, supplemented by special statements on public debt issues, redemptions, and exchanges by Bureau of the Public Debt.
¹ For Treasury bills, average rates on bank discount basis are shown; for United States savings bonds, approximate yield to maturity is shown.
¹ For United States savings bonds of Series D to F not currently on sale, amounts represent accrued discount plus issue price of bonds in adjustment cases; for Series E and F currently on sale, amounts represent issue price plus accrued discount; and for Series G, amounts represent issue price at par.
¹ For United States savings bonds of Series D to F, amounts represent current redemption value (issue price plus accrued discount); and for Series G, amounts represent redemption value at par.
¹ Includes securities of certain issue months which have matured.
¹ Deduct. Represents excess of amounts transferred from unclassified sales and redemptions to sales and

Oeduct. Represents excess of amounts transferred from unclassified sales and redemptions to redemptions of a designated series over amounts received as unclassified sales and redemptions. Represents excess of amounts transferred from unclassified sales and redemptions to sales and 7 Deduct.

Table 24.—Public debt increases and decreases, and balances in general fund, fiscal years 1916-50

[In millions of dollars. On basis of daily Treasury statements, see p. 443]

			Analysis of i	ncrease or decr debt	ease in public	
Fiscal year	Public debt outstanding at end of year	Increase, of decrease (-), in public debt during year	Due to excess of expenditures (+) or receipts (-)	Resulting in- crease (+) or decrease (-) in general fund balance	Decreases due to statutory debt retire- ments 1	General fund balance at end of year

### SUMMARY OF CHANGES IN THE PUBLIC DEBT, FISCAL YEARS 1916-50

[In millions of dollars]	
Increase in debt on account of— Excess of expenditures in certain years. 270, 284. 6 Net increase in general fund balance 5, 359. 2	275, 643. 8
Decrease in debt on account of— Statutory debt retirements.  Retirements from surplus receipts in certain years.  9, 157. 2 10, 320. 6	19, 477. 8
Net increase in debt since June 30, 1915	256, 166. 1
Public debt:       1, 191. 4         As of June 30, 1915       1, 191. 4         As of June 30, 1950       257, 357. 4	<del>-,</del>
Net increase, as above	256, 166. 1

^{*}Less than \$50,000.

Beginning 1943, statutory debt retirements were not included in budget expenditures in the daily Treasury statement. Such expenditures have been included in this table for comparable purposes.

Table 25.—Statutory debt retirements, fiscal years 1918-50

[In thousands of dollars. On basis of par amounts and of daily Treasury statements through 1947, and on basis of Public Debt accounts thereafter; see p. 443]

	· .								
Fiscal year	Cumu- lative sinking fund	Repay- ments of foreign debt	Bonds and notes received for estate taxes	Bonds received for loans from Public Works Admin- istration	Fran- chise tax receipts, Federal Roserve Banks	Pay- ments from net earnings, Federal inter- mediate credit banks! ¹ Act of Mar. 4, 1923 (42 Stat. 1456, sec. 206 (b)), requiring division of net earnings, was amended by act of May 19, 1932 (47 Stat. 159, sec. 3). Act of Aug. 19, 1937 (50 Stat. 715, sec. 30), provides for franchise tax.

² Includes \$4,842,066.45 written off the debt Dec. 31, 1920, on account of fractional currency estimated to

have been lost or destroyed in circulation.

Beginning with 1947, bonds acquired through gifts, forfeitures, and estate taxes are redeemed prior to maturity from regular public debt receipts.

Represents payments from net earnings, War Damage Corporation.

Note.—Details by months from May 1941 for Series E, F, and G bonds (and from May 1935 for Series A–D bonds) will be found in 1943 annual report, p. 604, and in corresponding tables in subsequent reports. Series A–D sales and redemptions will be found in table 28 of this report.

Includes sales of F and G bonds to commercial banks. During calendar year 1940, commercial banks were permitted to purchase limited amounts of Series F and G bonds for investment of savings deposits (for details as to limitations, see pp. 44 and 47 of 1944 annual report); and they were again permitted to make

through Dec. 8, 1945 (see p. 38 of 1946 annual report). See also footnote 7.

2 Beginning with June 18 through June 30, 1945 (see pp. 50 and 51 of 1945 annual report), and from Dec. 3 through Dec. 8, 1945 (see p. 38 of 1946 annual report). See also footnote 7.

2 Beginning with June 1947, Series E sales include small amounts of unclassified sales consisting of Series E, F, and G. These amounts are substantially less than sales reported as unclassified in daily Treasury statement. The greater part of that item consists of sales for which information is available as to series but not very of issue Ochronic of that information such sales are included in this table according to continuous. but not year of issue. On basis of that information such sales are included in this table according to series. Prior to June 1947 it was possible to distribute by series all sales reported as unclassified in daily Treasury statement.

³ Series E redemptions include small amounts of unclassified Series A-D redemptions beginning with October 1944, and small amounts also of unclassified Series F and G redemptions beginning with June 1947.

Estimated, except for Series G. Estimated. Figures represent increment in value. 5 Estimated.

⁶ Amounts outstanding are at current redemption values, except Series G bonds which are stated at par. Unclassified bonds shown in daily Treasury statement have been classified by series in this table.
⁷ Includes sales to institutional investors from July 1-15, 1948 (Security Loan drive). See 1948 annual

report, exhibit 12.

^{*}Less than \$50,000.

Total	3, 992, 870	58, 697, 360	1, 679, 857	26, 005, 075

Note.—Sales from May 1941 through June 1946, by months, calendar years, and fiscal years, and eumulative, will be found in the 1943 annual report, pp. 614 and 618, and in corresponding tables in the annual reports for 1944-46. Sales for subsequent fiscal years and cumulative will be found in the annual report for 1917, p. 411, and in corresponding tables in subsequent reports. Redemptions by States for the months of the fiscal year 1946, for the calendar year 1945 and fiscal years 1946-48, and cumulative from October 1944 (the earliest available) will be found in the annual report for 1946, p. 532, and in corresponding tables in subsequent reports. Sales and redemptions by months from July 1946 have been published at intervals in the Treasury Bulletin (redemptions were published for the last time in the August 1949 Bulletin).

¹ Sales through March 1947.

² State figures exclude sales of Series F and G bonds to commercial banks. Commercial banks were permitted to purchase these bonds under certain conditions (see table 29, footnote 1).

Table 33.—Percent of savings bonds sold in each year redeemed through each yearly period thereafter, by denominations

Note.—The percentages shown in this table are the proportions of the value of the bonds sold in any calendar year which are redeemed before July 1 of the next calendar year and before July 1 of succeeding calendar years. Both sales and redemptions are taken at matnrity value. The average percentages shown above are simple averages of the percentages for the applicable annual series.

² Series G savings bonds are not available in denominations of \$25.

 $^{^{-1}}$  June 1, 1914, is the earliest issue date for bonds of the \$10 denomination. Sale was discontinued Mar. 31, 1950.

² Oct. 1, 1945, is the earliest issue date for bonds of the \$200 denomination.

Table 34.—Sales and redemptions of Treasury notes, tax and savings series, August 1941–June 1950  $^{\rm t}$

¹ All series originally issued as "Treasury notes—tax series." However, designation of Series C was changed to "Treasury savings notes, Series C" on June 23, 1943. For description of all series, see 1943 annual report, p. 533, and p. 503 of this report. Sales and redemptions from inception, August 1, 1941, will be found in 1943 annual report pp. 638 and 640, and in corresponding tables in subsequent reports.

¹ Includes exchanges in connection with the offerings in September 1942 of Series A-1945 and Series C.

### Interest on public debt and guaranteed obligations

Table 35.—Amount of interest-bearing public debt outstanding, the computed annual interest charge, and the computed rate of interest, June 30, 1916-50, and at the end of each month during 1950 1

[On basis of Public Debt accounts through June 1937, and subsequently on basis of daily Treasury statements, see p. 443]

¹ For monthly data back to June 30, 1916, see annual reports for 1929, p. 509; for 1936, p. 442; and correspond-

reformed the subsequent reports.

Interest-bearing debt includes discount on Treasury bills from June 30, 1930, the amount being deducted from interest-bearing debt before calculation of average interest rate. Savings bonds of Series A-F are included in interest-bearing debt at their current redemption value from March 1935. Treasury tax and savings notes, beginning August 1941, are included at face amount. Face value of savings bonds and tax and savings notes of any yearly series maturing from month to month which are not currently presented for retirement is shown as interest-bearing debt until all bonds or notes of yearly series have matured. Thereafter, total amount outstanding is shown as matured debt upon which interest has ceased. In computing average rate of interest, the rates used for both savings bonds and tax and savings notes are based upon annual yield on such obligations if held to maturity.

¹ For bonds selling above par and callable at par before maturity, the yields are computed on the basis of redemption at first call date; while for bonds selling below par, yields are computed to maturity. Monthly averages are averages of daily figures. Each daily figure is an unweighted average of the yields of the individual issues. Prior to Sept. 1941, yields were computed on the basis of the day's closing price on the New York Stock Exchange except that on days when an issue did not sell, the yield was computed on the mean of closing bid and ask quotations on the Stock Exchange. Commencing Sept. 1941, yields are computed on the basis of the mean of closing bid and ask quotations in the over-the-counter market. For average yields by months from January 1919 through December 1929, see p. 662 of the annual report for 1943. ² From July 17, 1928, through Nov. 29, 1935, yields are based on all outstanding partially tax-exempt Treasury bonds neither due nor callable for 12 years; from Nov. 30, 1935, through Dec. 14, 1945, yields are based on all outstanding partially tax-exempt Treasury bonds neither due nor callable for 15 years. This average was discontinued as of Dec. 15, 1945, because there were no longer any bonds of this classification due or callable in 15 or more years.

due or callable in 15 or more years.

Average of all taxable Treasury bonds neither due nor callable for 15 years. Taxable bonds are those on which the interest is subject to both the normal and surtax rates of the Federal income tax. This average commenced Oct. 20, 1941.

¹ Prices on June 30, 1949 and 1950, are closing bid and ask quotations in over-the-counter market as compiled by Federal Reserve Bank of New York. Prices in range columns are mean of closing bid and ask quotations in over-the-counter market except that Treasury bond prices prior to Oct. 1, 1939, are closes on New York Stock Exchange. "When issued" prices are included in price range beginning Oct. 1, 1939. Dates of highs and lows, in case of recurrence, are latest dates. Yields when issues are quoted on a price basis are percent per annum compounded semiannually and are computed on the mean of bid and ask prices.

² Treasury bills are excluded. For description and amount of each issue outstanding on June 30, 1950, see table 17; for information as of June 30, 1949, see 1949 annual report, page 406,

³ Called on May 13, 1949, for redemption on Sept. 15, 1949,

Called on Aug. 12, 1949, for redemption on Dec. 15, 1949.

Revised.

Tor further details on certain of these accounts, see tables 42 through 62.
 Transferred to civil service retirement and disability fund pursuant to Public Law 180,
 Stock Congress, approved July 21, 1949.
 Includes a \$1,000 thousand bond held in escrow.
 Transferred to civil service retirement and disability fund in accordance with act of

June 30, 1948 (62 Stat. 1163).

<sup>Proprietary interest of the United States in these banks ended June 26, 1947.
Figures are incomplete as they include only the securities held by the Federal Reserve Banks and branches in safekeeping for joint stock land banks, subject to the order of the Governor of the Farm Credit Administration.
Corporation has been liquidated.</sup>

¹ Includes the Alaska Railroad and Canal Zone retirement funds which were abolished and combined with the civil service retirement and disability fund by Public Law 180, 81st Congress, approved July 21,

<sup>1949.

2</sup> Under Public Law 426, approved Feb. 28, 1948, it was provided that after June 30, 1948, there would be deducted and withheld from basic salary, pay, or compensation of any officer or employee to whom the Civil Service Retirement Act applies a sum equal to 6 per centum of such officer's or employee's basic salary, pay, or compensation in lieu of 5 per centum deduction previously in effect.

3 Comprises \$302,504,728 appropriated from general fund to cover liability of United States and \$2,004,152.64 representing District of Columbia and Government corporations' contributions.

⁴ Excludes \$7,500 representing repayment of investment.
5 Excludes \$3,417,230.50 July prior receipts (net) and includes \$272,571.05 representing June receipts covered into the Treasury as July current. Also excludes \$16,314.35 to be adjusted in the fiscal year 1951.

Table 46.—District of Columbia teachers' retirement and annuity fund—Assets held by the Treasury Department, June 30, 1950

[Public Law 624, approved Aug. 7, 1946 (60 Stat. 875), created this fund as successor to the District of Columbia teachers' retirement fund established under the act of Jan. 15, 1920, as amended, effecting the consolidation of the deductions fund and the Government reserve fund as of July 1, 1946]

NOTE.—Prior to 1945, valuation reserves were reported as "other liabilities" rather than suspended credits to the respective asset accounts.

¹ Includes \$1,250,000 thousand temporary borrowings by Commodity Credit Corporation from Secretary of the Treasury.

Includes loans made by Secretary of the Treasury.
 Included in "land, structures, and equipment" classification.
 Includes stock of banks for cooperatives owned by Farm Credit Administration.

⁵ Contra interagency assets and liabilities included for those agencies not reporting in statement prior to 1945.

6 Decrease from 1945 caused in part by elimination of interagency assets and liabilities of merged R. F. C. affiliates effective July 1, 1945, and establishment of valuation and depreciation reserves.

deflocation 1947 caused in part with respect to (1) assets: exclusion of assets of U. S. Maritime Commission and War Shipping Administration functions (latest reports available to Treasury for these agencies relating to lend-lease and UNRRA activities are as of Mar. 31, 1947, and the remainder of War Shipping Administration functions as of Feb. 28, 1947) amounting to \$11,367,847 thousand and decrease of \$9,365,307 thousand

by cancellation (Public Law 860, approved June 30, 1948) of Treasury loans to R. F. C. for which no assets were acquired by Treasury except right of future recoveries from nonlending net assets; (2) liabilities: exclusion of liabilities of U.S. Maritime Commission and War Shipping Administration functions (see parenthetical statement in item (1) above) amounting to \$1,160,232 thousand, and decrease in R. F. C. liabilities to Treasury of \$9,365,307 thousand referred to in item (1) above; and (3) United States interest other than interagency; exclusion of proprietary interest in U. S. Maritime Commission and War Shipping Administration functions (see parenthetical statement in item (1) above) amounting to \$10,207,553 thousand.

See-footnote 7. Reorganization Plan No. 21, effective May 24, 1950, abolished the U. S. Maritime Commission and provided for its functions to be performed by a Federal Maritime Board and a Maritime Administration in the Department of Commerce. Current data on maritime activities will be published when available.

• Represents only accrued interest; other accrued liabilities included in "All other liabilities."

10 Included in "All other liabilities."

7 The surplus is considered by the Corporation as available for future insurance losses and related expenses with respect to insured institutions.

8 Includes \$0.1 million deposits to "Guaranty fund."

9 As shown above as a liability of each corporation or agency.

10 As shown as an asset of the U. S. Treasury under "Other" business-type activities. This does not include obligations of the Economic Cooperation Administration, which agency is not required to report.

11 Represents R. F. C. and Agricultural Marketing Act revolving fund proprietary interests in Government corporations.

^{*} Less than \$50,000.

1 Excludes unexpended balances of appropriated funds.

2 Includes \$443.3 million guaranteed loans held by lending agencies.

3 Includes \$83.1 million guaranteed loans held by lending agencies.

4 Includes \$83.1 million guaranteed loans held by lending agencies.

5 Includes notes for short-term borrowings.

6 Represents guaranteed obligations arising from drafts and invoices paid by commercial

⁶ The surplus is not available by law for dividend distribution and is considered by the Corporation as a reserve for future deposit insurance losses and related expenses with respect to insured banks.

Reorganization Plan No. 17 of 1950.

17 Consists of Farm Security Administration program, homes conversion program, Digitized for FRASER

income-producing programs of \$125.4 million.

Footnotes through 11 on p. 609.

13 See table 69, footnote 3.

14 Consists of Defense Homes Corporation (in liquidation); Federal Crop Insurance Corporation; Federal National Mortgage Association; Federal Prison Industries, Inc.; Inland Waterways Corporation; Institute of Inter-American Affairs; Panama Railroad Company; Smaller War Plants Corporation (in liquidation); The Virgin Islands Corporation; and War Damage Corporation (in liquidation).

15 See table 69, footnote 6.

16 Consists of Community Facilities Service and Public Works Administration (in liquidation). Figures for Community Facilities Service are as of May 23, 1950, at which time this activity was transferred to Housing and Home Finance Agency, pursuant to Reorganization Plan No. 17 of 1950.

public war housing program, and veterans' re-use housing program.

18 See table 69, footnote 9.

See table 69, footnote 9.
 Represents obligations of Government corporations and agencies as shown under "Bonds, debentures, and notes payable—U. S. Treasury." The latter does not include \$964.4 million obligations of the Economic Cooperation Administration, which agency is not required to report.
 Includes \$3,750.0 million loan to the United Kingdom.
 Includes \$2,750.0 million subscription to the International Monetary Fund and \$635.0 million stock in the International Bank for Reconstruction and Development.
 Includes \$33,50.0 million reserves for contingent losses, expenses, and other charges.
 Consists of net income from power operations of \$156.2 million and net expense of non-processor during a programs of \$155.4 million.

Footnotes through 4 on p. 613.

struction Administration; Department of the Army—guaranteed loans (World War II) and natural fibers revolving fund; Department of the Navy—guaranteed loans (World War II) and sale of surplus supplies (World War I); Housing and Home Finance Agency, Office of Administrator—Alaska housing program and slum clearance program; Treasury Department—miscellaneous loans and certain other assets; Veterans' Canteen Service;

⁵ See table 70, footnote 8. ⁶ Reorganization Plan No. 21, effective May 24, 1950, abolished the U. S. Maritime Commission and provided for its functions to be performed by a Federal Maritime Board and a Maritime Administration in the Department of Commerce. Current data on maritime activities will be published when available.

on maritime activities will be published when available.

7 See table 68, footnote 16.

8 Consists of Farm Security Administration program, homes conversion program, public war housing program, and veterans' re-use housing program.

9 Consists of Agricultural Marketing Act revolving fund; Federal Security Agency—loans to students; Department of the Interior—Indian loans and Puerto Rico Recon-

and guaranteed loans to veterans.

10 Represents net income during the fiscal year 1950 from power operations.

11 Includes cancellation of Federal Crop Insurance Corporation stock held by the
U. S. Treasury in the amount of \$73,000 thousand as authorized by Public Law 268, 81st Congress, approved Aug. 25, 1949.

¹ Corporation functions, assets, and liabilities have been transferred for liquidation to R.F.C., and ownership of stock by Treasury consists of stock certificate of \$24,000,000 indorsed for \$18,243,104.96 representing payment by R.F.C. The Treasury has not canceled this stock certificate because there is no authority to do so.

² Reconstruction Finance Corporation funds.

³ Pursuant to sec. 246 of act of June 29, 1948 (62 Stat. 1076-1077), the Corporation issued to the United States as of July 1, 1948, a receipt for \$1.00 as evidence of ownership of the Corporation by the United States. This amount is consequently shown as capital stock and the remainder of the capital stock of the predecessor corporation, \$6,999,999, is included in surplus.

4 Exclusive of net payments from Treasury, or transfer of assets authorized by law, for which no formal receipts or other evidences of payment are held by Secretary of the

Treasury in the following:

Stock corporations:	•
Inland Waterways Corporation	\$12, 298, 164, 69
Panama Railroad Company	232, 182. 67
Public Housing Administration	149, 221, 652, 49

	-,0, 1201 12
Total	1, 212, 516, 509, 50

⁵ Consists of net cash repayments of \$399,764,363.00 to Treasury and cancellations of R.F.C. notes amounting to \$202,146.01. Cancellations were made under provisions of act of June 30, 1948 (62 Stat. 1187-1188), representing costs incurred subsequent to June 30, 1947, for handling, storing, processing, and transporting strategic and critical materials to stockpiles.

⁶ A payment in this amount is required to be made not later than June 30 of each

calendar year under provisions of act of July 30, 1947 (61 Stat. 576-577).

⁷ Excludes \$64,962,615.47 shown under bonds and notes in preceding part of this table. This sum represents funds borrowed from the Treasury which, together with funds appropriated to Farmers' Home Administration, are available for emergency crop and feed loans and rural rehabilitation loans to farmers, etc.

⁸ Figures are as of May 23, 1950, at which time this activity was transferred to Housing and Home Finance Agency, pursuant to Reorganization Plan No. 17 of 1950.

Reorganization Plan No. 21 effective May 24, 1950, abolished the U.S. Maritime Commission and provided for its functions to be performed by a Federal Maritime Board and a Maritime Administration in the Department of Commerce. Current data on maritime activities will be published when available.

¹⁹ Excludes \$1,281,135,657.66 shown under bonds and notes in preceding part of this table. This sum represents funds borrowed from the Treasury which, together with funds appropriated to Rural Electrification Administration, are available for advances

to cooperatives, States, and private utilities.

"Reserves amounting to \$237,551,279.69 have been established against these securities.

Hincludes loans amounting to \$1,587,386.85 and securities amounting to \$3,007,010.00 held by R. F. C. affiliate, assets held for U. S. Treasury, as of June 30, 1950. Comparable amounts as of June 30, 1949, were not included in this table in the 1949 annual report.

Table 74.—Capital stock of Federal home loan banks held on June 30, 1949 and 1950, repayments on capital stock, and dividends earned by the Treasury during the fiscal year 1950

¹ Figures differ slightly from monthly circulation statements for following reasons:
(a) Beginning June 30, 1922, form of circulation statement was revised so as to include in holdings of Federal Reserve Banks and agents, and hence in stock of money, gold bullion and foreign gold coin held by Federal Reserve Banks and agents, and to include in holdings of Federal Reserve Banks and agents, and bence exclude from money in circulation, all forms of money held by Federal Reserve Banks and agents, whether as reserve against Federal Reserve notes or otherwise. For sake of comparableness, figures in this table for earlier years include these changes. For full explanation of this revision, see 1922 annual report, p. 433. (b) The form of circulation statement was revised again beginning Dec. 31, 1927, so as to exclude earmarked gold coin from stock of money, and hence from money in circulation; to include in holdings of Federal Reserve Banks and agents, and hence in stock of money, gold held abroad for account of Federal Reserve Banks; and to include in all categories, minor coin (1-cent piece and 5-cent piece). Beginning Dec. 31, 1927, circulation statement is dated for end of month instead of beginning of succeeding month, as was practice theretofore, and figures on revised basis for "Money held in the Treasury" are used. For sake of comparableness, figures in this table for earlier years include these changes. For full explanation of this revision, see 1928 annual report,

pp. 70-71. For figures for all years from 1860 through 1934, see 1947 annual report, pp. 478-481. Changes, minor in amount, are made in some figures in the June 30 circulation statements for use in these annual report tables.

1 Excludes gold and silver certificates and Treasury notes of 1890 outside Treasury. Beginning with 1934, excludes amount (gold certificates) held for Federal Reserve Banks and agents. These items are excluded since gold and silver held as security against them are included. Composition of the stock of money is shown in table 79.

³ From 1934 to date, amount (gold certificates) held for Federal Reserve Banks and agents is excluded from total money in Treasury, see footnote 2.

Composition of money in circulation is shown in table 80.
 Based on Bureau of Census estimated population for continental United States as

6 On February 26, 1947, gold in amount of \$1,800,000,000 held for account of exchange stabilization fund was used as follows: (1) \$687,500,000.11 was paid to International Monetary Fund; (2) \$275,224,999.89 was transferred to gold certificate fund, Board of Governors, Federal Reserve System; and (3) \$837,275,000 was transferred to general fund of Treasury (and is included in this column).

¹ See table 78, footnote 1. For figures for all years from 1860 through 1934, see 1947 annual report, pp. 482-484.

of at least 25 percent (40 percent prior to passage of act of June 12, 1945) including redemption fund which must be deposited with Treasurer of United States, against Federal Reserve notes in actual circulation ("Gold certificates") as herein used for 1934 and subsequent years include credits with Treasurer of United States payable in gold certificates). Federal Reserve notes are obligations of United States and first lien on all assets of issuing Federal Reserve Bank. Federal Reserve Bank notes at time of issuance were secured by direct obligations of United States or commercial paper; however, lawful money has been deposited with Treasurer of United States for their redemption and they are in process of retirement. National bank notes at issuance were secured by direct obligations of United States; lawful money has been deposited with Treasurer for their redemption and they are being retired.

³ Totals involve duplication to extent that United States notes and Federal Reserve notes, included in full, are in part secured by gold, also included in full. Gold certificates, silver certificates, and Treasury notes of 1890 have been excluded, however, since they are complete duplications of equal amounts of gold or silver held as security therefor and

included in totals.

^{*}Part of gold and silver included in stock of money is held as reserve against other kinds of money, as follows: (1) As reserve for United States notes and Treasury notes of 1890—gold bullion (gold coin and bullion prior to gold conservation actions of 1933 and 1934) varying in amount from \$150,000,000 to \$156,039,431 during years included in this table; (2) also as security for Treasury notes of 1890 (these notes are being canceled and retired on receipt)—an equal dollar amount in standard silver dollars; (3) as security for outstanding silver certificates—silver in bullion and standard silver dollars of monetary value equal to face amount of such silver certificates; and (4) as security for gold certificates—gold bullion (gold coin and bullion before gold actions of 1933 and 1934) of value at legal standard equal to face amount of such gold certificates. Federal Reserve notes are secured by deposit by Federal Reserve Banks with Federal Reserve and such discounted or purchased paper as are eligible under terms of Federal Reserve Act, as amended, or (from Feb. 27, 1932) of direct obligations of United States. Federal Digitized for Fraserve Banks must maintain reserves in gold certificates (gold for 1933 and prior years)

See table 78, footnote 1. For figures for all years from 1860 through 1934, see 1947 annual report, pp. 485-487.
 For description of reserves held against various kinds of money, see table 79. footnote 2.
 Gold Reserve Act of 1934, which was culmination of gold actions of 1933, vested in

United States title to all gold coin and gold bullion. Gold coin was withdrawn from circulation and formed into bars. Gold coin (\$287,000,000) shown on Treasury records as being then outstanding was dropped from monthly circulation statement as of Jan. 31, 1934.

r Revised.

Amount of customs duties is calculated on basis of reports of Bureau of the Census showing quantity and value of merchandise imported. Figures back to 1867 can be found in annual reports for 1930, p. 523; 1932, p. 382; and corresponding tables in subsequent reports.

Table 86.—Estimated customs duties, value of dutiable imports, and ratio of estimated duties to value of dutiable imports, by tariff schedules, calendar years 1939-49 and monthly January 1948-June 1950 1

¹ Amount of customs duties is calculated on basis of reports of Bureau of the Census, showing quantity and value of merchandise imported. Total estimated duties and total value of dutiable imports will be found in table 85. For figures back to 1890 see annual reports for 1930, p. 525; 1932, p. 383; and corresponding tables in subsequent reports.

² Taxes collected on dutiable commodities under revenue acts and Sugar Act of 1937 are included in appropriate schedules.

Table 87.—Value of dutiable imports for consumption and estimated duties collected, by countries, fiscal years 1948-50

¹ Excludes \$4,844,100 payment to States for agricultural experiment stations, pursuant to title I, sec. 9, Research and Marketing Act of 1946.

² Includes \$10,761 expenditures for fire control activities in connection with the flood control program (Flood Control Act, 33 U. S. C. 701a).

³ Reported on basis of estimated total cost to Government of commodities distributed through central agencies. Includes \$2,197,821 as estimated cost of Irish potatoes acquired under price support program, pursuant to sec. 3 of Public Law 471, 81st Congress, and \$11,500,003 as estimated cost of perishable food commodities acquired through price support operations, pursuant to sec. 416 of Public Law 439, 81st Congress. Congress.

Comprises \$4,844,100 as payments to States for agricultural experiment stations and \$1,339,582, coopera-

tive projects in marketing agreements, pursuant to title I, sec. 9 and title II, sec. 204 (b), respectively, of the Research and Marketing Act of 1946.

Special fund account repealed as a permanent appropriation, effective July 1, 1935, by sec. 4 of the Permanent Appropriation Repeal Act, June 26, 1934 (48 Stat. 1227). Annual appropriation provided for same object under the account immediately following.

object under the account influence of June 30, 1929.

Activities under this caption expired June 30, 1929.

Deduct; represents net repayments. These accounts were discontinued, but their functions are continued under the two accounts immediately following.

These accounts consolidated with combined accounts immediately following.

Beginning July 1, 1939, expenditures of Public Health Service stated under Federal Security Agency.

655 TABLES

Table 97.—Expenditures made by the Government as direct payments to States under cooperative arrangements and expenditures within States which provided relief and other aid, fiscal year 1950

[The Treasury Department, for general information, has compiled from figures furnished by the departments and establishments concerned the following statement, exhibiting by States and Territories the amounts paid to or within each under the appropriations for Federal aid to States shown under classes I and II in the preceding table.]

a Deduct.

Reported on basis of estimated total cost to Government of commodities distributed through central agencies. Includes \$2,197,821 as estimated cost of Irish potatoes acquired under price support program, pursuant to sec. 3 of Public Law 471, 81st Cong., and \$11,500,003 as estimated cost of perishable food commodities acquired through price support operations, pursuant to sec. 416 of Public Law 439, 81st Cong.

Comprises \$400,989,712 for postwar Federal-aid highways, \$7,023,395, \$7,023,395 for prewar Federal-aid primary, \$3,477,250 for prewar Federal-aid secondary, \$10,155,389 for prewar Federal-aid grade crossing elimination, \$489,015 for emergency relief (works program), and \$775,395 for public lands highways.

Comprises \$1,278,421 for access roads; \$1,105,033 for strategic highway network; \$1,025,585 for advance surveys and plans; \$3,561 for flight strips; \$2,028,719 for war and emergency damage (Hawaii); and \$428,803 for payment of claims to reimburse States for damage done to Federal-aid roads by military vehicles, etc.

Does not include expenditure of \$149,765 for maintenance and repair of vessels, as follows: California, \$37,732; Maine, \$37,418; Massachusetts, \$41,211; and New York, \$33,404.

Table 97.—Expenditures made by the Government as direct payments to States under cooperative arrangements and expenditures within States which provided relief and other aid, fiscal year 1950—Continued

^a Deduct.

¹⁷ Public works advance planning, emergency grants were included in the report for the fiscal year 1949. Since these expenditures take the form of noninterest-bearing advances to finance the planning of public works and are repayable contingent upon future construction of such works, they have been considered as loans rather than grants, and therefore, not included in this statement. The expenditures for fiscal 1950 amounted to \$988,624.

¹⁸ Comprises payments of \$230,754,577 under conservation and use of agricultural land resources and \$59,197,418 under the Sugar Act.

19 The sum of \$118,105,840 was also expended from the Army National Guard appropriation by various services of the Army for direct aid of the several States, Territories, and possessions. The amount each State received cannot be ascertained.

20 Expenditures on an obligation basis.

Includes payments on account of interest to Jan. 1, 1928. Payments on this class of awards are first applied on account of the total amount payable as of Jan. 1, 1928, as directed by the Settlement of War Claims Act of 1928 until total of all payments on the 3 classes equals 80 percent of the amount payable Jan. 1, 1928. Payment of accrued interest since Jan. 1, 1928, on this class of claims deferred in accordance with act.

Includes payments on account of interest to Jan. 1, 1928.

Payments made in accordance with Public Law 375, approved Aug. 6, 1947.

⁴ Represents deductions from payments that have been covered into the Treasury as miscellaneous receipts.

5 Of this amount, \$24,150.09 has been paid to the Government of Germany. A further sum of \$16,295.74 is payable in connection with the adjudication of late claims under the agreement of Dec. 31, 1928.

6 Interest accrued from Jan. 1, 1928, to Mar. 11, 1940, on \$26,612.06 representing awards plus interest to Jan. 1, 1928. No applications filed by claimants. Time for filing applications expired Mar. 11, 1940.

cations expired Mar. 11, 1940.

Note.—This table is designed to bring together in one place an analysis of the flow of funds to and from the Federal Government on a cash basis. Budget and trust fund operations have been consolidated and intragovernmental transactions have been eliminated in the derivation of figures on Treasury cash operating income and outgo. Similarly, intragovernmental transactions have been excluded from public debt transactions and figures have been derived on net cash borrowing or repayment of borrowing by the Federal Government as a whole (including all Government corporations and trust funds) from the general public; this category includes the Federal Reserve Banks, Postal Savings System, and State and local governments, as well as private institutions, corporations, associations, and individuals. Figures are based on daily Treasury statements.

*Less than \$500,000.

¹ The United States subscription to the capital of the International Monetary Fund was paid in part from the exchange stabilization fund. United States payments to the Fund in 1947 consisted of \$1,800 million paid from the exchange stabilization fund and \$950 million paid as budget expenditures. Of this total, \$1,724 million (net) was invested in noninterest-bearing United States notes, thereby making this amount noneash expenditures during 1947. Of the \$1,026 million cash portion of the expenditures, \$968 million was assumed to have come from the initial exchange stabilization fund payment and the remaining \$58 million represented redemption later in 1947 of notes assumed to have been acquired through the stabilization fund payment. Accordingly, the noneash payments to the Fund are made up of \$774 million from the exchange stabilization fund and \$950 million from the budget payment.

² In addition to this decrease in the general fund balance, the exchange stabilization fund was drawn down by \$1,800 million for subscription to the capital of the Inter-

national Monetary Fund. (See footnote 1.)

³ Consists of seigniorage on silver and increment resulting from reduction in weight of the gold dollar. This item is part of the cash budget receipts of the Treasury shown

in this table, but is excluded from the concept of "Receipts from the public," as used in the Budget document.

4 The issuance of these securities has been treated as a noncash deduction from budget receipts at the time of issuance of the bonds and as a cash deduction at the time of redemption of the bonds. The figures shown are net issuance, or net redemption (-),

By partially owned Government corporations.

⁶ By Federal old-age and survivors insurance trust fund through October 1948. Thereafter includes also transfers from railroad unemployment insurance account to railroad unemployment administration fund, and reimbursement by the District of Columbia.

Accrued discount on savings bonds and bills less interest paid on savings bonds and

bills redeemed.

Interest payments to wholly owned Government corporations are not deducted because they are treated as negative expenditures when received by corporations; hence payments and receipts offset each other.

The issuance of these securities has been treated as a noncash budget expenditure at the time of issuance of these securities and as a cash expenditure at the time of re-

demption. The figures shown are net issuance, or net redemption (-).

¹⁰ In 1947, 1948, and 1949 principally proceeds of ship sales carried in trust accounts pending allocation, but finally allocable to budget receipts from sale of surplus property. Figures for 1947 and 1948 include \$53 million and \$8 million, respectively, of armed forces leave bonds redeemed for insurance premiums; after Aug. 31, 1947, all these bonds were redeemable for cash.

Excludes clearing account for outstanding checks and interest coupons, and telegraphic reports from Federal Reserve Banks (see 1. Summary of Treasury Cash Transactions).

Principally proceeds of ship sales (see footnote 10); F. D. I. C. repayments of capital stock until repayment was completed in August 1948; and net redemption, or issuance (-), in the market of securities of Government corporations.

^{*}Less than \$50 million.

r Revised.

Operations of Foreign Economic Cooperation trust fund have been considered as budget, rather than trust account, operations for purposes of this table.

Includes net expenditures of clearing account for outstanding checks and interest coupons, and telegraphic reports from Federal Reserve Banks; excludes changes in guaranteed securities outstanding.

3 Gross public debt, and guaranteed securities of Federal Government held outside

* Data on gross national product and its components are from Department of Commerce.

Includes expenditures for interest, veterans' pensions and benefits, grands-in-aid to State and local governments, loans to foreign governments, loans by Government corporations, etc.

6 Comprises net excess of (1) items such as receipts from sales of surplus property over (2) social insurance contributions not entering into budget receipts and excess of corporate tax liabilities over corporate tax payments to Treasury.

⁷ Also includes corporate inventory valuation adjustment, excess of Government enterprise surplus over subsidies, and statistical discrepancy adjustment.

⁸ Reflects principally items in process of collection and, as a negative factor, increases in commercial bank capital accounts.

⁹ Excludes deposits in mutual savings banks since these institutions are classified as nonbank investors rather than as part of the commercial banking system.

¹⁰ Currency held outside commercial banks excludes those currency items which constitute a part of noninterest-bearing debt of Federal Government.

¹¹ Total deposits, exclusive of Federal Government and commercial bank interbank deposits.

deposits.

12 Adjusted demand deposits, plus mutual savings banks' deposits in commercial banks.

1 Includes amounts postponed and unpaid under moratorium agreements for fiscal year 1932. For total principal and interest by country see Annual Report of the Secretary of the Treasury for 1947, p. 107,

the Treasury for 1947, p. 107.

² The German Government was notified on Apr. 1, 1938, that the Government of the United States would look to the German Government for the discharge of the indebtedness of the Government of Austria to the Government of the United States.

³ Increase over amount funded due to exercise of options with respect to the payment of interest due on original issue of bonds of debtor government.

⁴ Represents payments deferred.

⁵ The Hungarian Government deposited with the foreign creditors' account at the Hungarian National Bank an amount of pengo equivalent to the interest payments due from Dec. 15, 1932, to June 15, 1937. The debt-funding and moratorium agreements with Hungary provide for payment in dollars in the United States.

⁶ The United States held obligations in the principal amount of \$289,898.78, which,

together with accrued interest thereon, were canceled on Oct. 6, 1939, pursuant to agreement of Apr. 14, 1938, between the United States and the Republic of Nicaragua, ratified by the United States Senate on June 13, 1938.

⁷ Excludes claim allowance of \$1,813,428.69, dated Dec. 15, 1929.

⁸ Excludes book credit of \$408.02 for overpayment.

⁹ Excludes payment by the Rumanian Government to the Treasury on June 15, 1940, of \$100,000 as "a token of its good faith and of its real desire to reach a new agreement covering" Rumania's indebtedness to the United States. Silver bullion in the amount of \$29,061.46 was paid to the United States on June 16, 1933, which payment was credited June 15, 1947.

10 Consists principally of proceeds of liquidation of assets of Russian Government in U.S. (See annual report of the Secretary for 1922, p. 283.)

11 This Government has not accepted the provisions of the moratorium.

### Table 111 .- World War I indebtedness of Germany to the United States and amounts paid and not paid, June 30, 1950

PART I. INDEBTEDNESS OF GERMANY, JUNE 30, 1950

Class	Indebtedness as funded	Total indebted- ness, June 30, 1950 i	Principal	Interest ac- crued and unpaid

*Less than \$50 million.

Revised.

¹ Figures represent par values except in the case of data which include United States savings bonds of Series A-F, which are included on the basis of current redemption values.

² Includes partnerships and personal trust accounts. Nonprofit institutions and corporate pension trust funds are included under "Miscellaneous investors."

³ Exclusive of banks and insurance companies.

⁴ Comprises trust, sinking, and investment funds of State and local governments,

Territories, and possessions.

⁵ Includes savings and loan associations, nonprofit associations, corporate pension trust funds, dealers and brokers, and investments of foreign balances and international

trust tunds, dealers and brokers, and investments of foreign balances and international accounts in this country.

Data on daily Treasury statement basis. Since data exclude noninterest-bearing debt, they differ slightly from those in discussion of debt ownership. Includes special issues to Federal agencies and trust funds, and excludes guaranteed securities held by the Treasury.

See table 114, footnote 4.
 Excludes obligations of the Philippine Islands after June 30, 1946.

n. a. Not available.

The "total amount outstanding" of securities of the several issuers differs from the gross indebtedness of these issuers in that the former excludes noninterest-bearing debt. The "total privately held securities" differs from the net indebtedness of the borrowers in several additional respects. The former is derived by deducting from the total amount of interest-bearing securities outstanding the amount of such securities held by Federal agencies, Federal Reserve Banks, and by public sinking, trust, and investment funds. Not indebtedness, on the other hand, is derived by deducting from the gross indebtedness an amount equivalent to the total volume of sinking fund assets of the respective borrowers, but makes no allowance for any other public assets. other public assets.

² In the case of data which include United States savings bonds, Series A-D, E, and F, the figures for these

¹ In the case of data which include United States savings bonds, Series A-D, E, and F, the ingures for these bonds represent current redemption values.

1 On basis of daily Treasury statements. Excludes guaranteed securities held by the Treasury.

1 Includes Electric Home and Farm Authority notes, Federal intermediate credit bank debentures, Federal National Mortgage Association notes, home loan bank debentures, War Finance Corporation bonds (World War I), and joint stock land bank bonds. Includes Federal land bank bonds only through June 30, 1946; on June 27, 1947, the United States proprietary interest in these banks ended. Excludes stocks and interagency loans.

Securities the income from which is exempt from both the normal rates and surtax rates of the Federal

income tax

⁶ Securities the income from which is exempt only from the normal rates of the Federal income tax. In the case of partially tax-exempt (1) Treasury bonds and (2) United States savings bonds, interest derived from \$5,000 aggregate principal amount owned by any one holder is exempt from the surtax rates as well as the normal rates of the Federal income tax.
7 Securities the income from which is subject to both the normal rates and the surtax rates of the Federal

income tax

⁸ Special issues to Federal agencies and trust funds.

Excludes obligations of the Philippine Islands after June 30, 1946.
 Excludes Federal Reserve Banks. Includes individual Indian trust funds.

*Less than \$500,000.

¹ Banks and insurance companies covered in Treasury survey of ownership of securities issued or guaranteed by U. S. Government account for approximately 95 percent of amount of such securities owned by all banks and insurance companies in United States. Details as to each issue of security are available in *Treasury Bulletin* (a) monthly for above investors and (b) quarterly through September 1947 Bulletin* and semiannually thereafter for commercial banks classified by membership in Federal Reserve System.
¹ Securities beld in trust departments are excluded.
¹ Includes trust companies and stock sayings banks.

Includes trust companies and stock savings banks.
Includes banks and insurance companies which are not covered in Treasury survey

(see footnote 1). § Issues/which commercial banks (banks accepting demand deposits) are not permitted to acquire prior to specified dates, with three exceptions: (1) Concurrently with Fourth, Fifth, and Sixth War Loans and Victory Loan, commercial banks were permitted to subscribe for limited investment of their savings deposits; (2) commercial banks may temporarily acquire such issues through forfeiture of collateral; and (3) commercial banks may hold a limited amount of such issues for trading purposes. Bank-restricted issues as of June 30, 1949 and 1950, and the earliest dates on which commercial banks may own them are as follows:

Bank-restricted issue of Treasury bonds	Earliest date on which commercial banks may own bonds	Bank-restricted issue of Treasury bonds	Earliest date on which commercial banks may own bonds
2¼%, June 15, 1959-62	June 15, 1952	2½%, Dec. 15, 1964-69	Sept. 15, 1953
2¼%, Dec. 15, 1959-62	Dec. 15, 1952	2½%, Mar. 15, 1965-70	Feb. 1, 1954
2½%, June 15, 1962-67	May 5, 1952	2½%, Mar. 15, 1966-71	Dec. 1, 1954
2½%, Dec. 15, 1963-68	Dcc. 1, 1952	2½%, June 15, 1967-72	June 15, 1962
2½%, June 15, 1964-69	Apr. 15, 1953	2½%, Dec. 15, 1967-72	Dec. 15, 1962

Excludes guaranteed obligations held by Treasury.
U. S. savings bonds other than Series G are included at current redemption values. They were reported at maturity value by banks and insurance companies covered in Treasury survey and have been adjusted to current redemption value for this table.
Commodity Credit Corporation demand obligations in amounts of \$11 million on June 30, 1949, and \$1 million on June 30, 1949, and \$1 million on June 30, 1949, and \$1 million on June 30, and are shown only in total amount outstanding; data for reporting banks are not available.

⁵ No detail is shown in the manufacturers' excise tax group as it has been necessary to make arbitrary assumptions as to the amount and timing of material shortages as they affect the production of specific taxable commodities. In view of this, it is felt that only the total could be estimated with a reasonable degree of accuracy.

6 Excludes estimated collections from the tax on fishing equipment.

Excludes estimated collections from the tax on using equipment.
 Estimated collections from the taxes on adulterated and process or renovated butter, mixed flour, and filled cheese are included in "All other" miscellaneous excise taxes.
 Includes collections from: Taxes on narcotics, adulterated and process or renovated butter, mixed flour and filled cheese, and taxes imposed under the National Firearms Act which are effective currently. In addition includes collections from excise taxes repealed or suspended (with the exception of manufacturers'

excise tax on luggage).
9 Classified by organization units, based on table 4 of the 1952 Budget document. The figures for 1950 are based upon the Treasury's Combined Statement of Receipts, Expenditures and Balances, and therefore differ from figures published in the daily Treasury statement.
10 Includes \$11,036,200 representing net investments in Federal securities by wholly owned Government corporations and agencies which are excluded from budget expenditures in the Budget document.

Deduct, excess of repayments and collections over expenditures.

1 Amounts shown for the individual income tax withheld are on the daily Treasury statement basis; employment taxes, customs, and refunds of receipts are on the warrants-issued basis. Detail concerning income taxes not withheld is on the warrants-issued basis, which, in the case of these taxes, is the same as the collection basis. The detail of miscellaneous internal revenue is on the collection basis and the detail of miscellaneous receipts is on the warrants-issued basis. Receipts from the Railroad Unemployment Insurance Act are on the daily Treasury statement basis, which, for this tax, is the same as the warrants-issued basis. Adjustment in all cases is to the daily Treasury statement basis. (See table 7, "Note.")

2 Includes the effect of the Excess Profits Tax Act of 1950, approved Jan. 3, 1951.

3 The adjustment for total income and excess profits taxes other than withheld is arbitrarily assigned to the individual income tax.

4 Collections for credit to trust funds are not included.

5 No detail is shown in the manufacturers' excise tax group as it has been necessary to make arbitrary
